Package ‘ClusterBootstrap’

June 12, 2017

Title Analyze Clustered Data with Generalized Linear Models using the Cluster Bootstrap

Date 2017-06-12

Version 0.9.3

Description Provides functionality for the analysis of clustered data using the cluster bootstrap.

Depends R (>= 3.0), stats, utils, graphics, parallel

License GPL-3

Fit generalized linear models with the cluster bootstrap

**Description**

Fit a generalized linear model with the cluster bootstrap for analysis of clustered data.

**Usage**

```r
clusbootglm(model, data, clusterid, family = gaussian, B = 5000, 
confint.level = 0.95, no_cores = 1)
```

**Arguments**

- `model`: generalized linear model to be fitted with the cluster bootstrap.
- `data`: dataframe that contains the data.
- `clusterid`: variable in data that identifies the clusters.
- `family`: error distribution to be used in the model, e.g. `gaussian` or `binomial`.
- `B`: number of bootstrap samples.
- `confint.level`: level of confidence interval.
- `no_cores`: number of CPU cores to be used.

**Details**

Some useful methods for the obtained `clusbootglm` class object are `summary.clusbootglm`, `coef.clusbootglm`, and `clusbootsample`.

**Value**

`clusbootglm` produces an object of class "clusbootglm", containing the following relevant components:

- `coefficients`: A matrix of `B` rows, containing the parameter estimates for all bootstrap samples.
- `bootstrap.matrix`: `n*B` matrix, of which each column represents a bootstrap sample; each value in a column represents a unit of `subjectid`.
- `lm.coefs`: Parameter estimates from a single (generalized) linear model.
- `boot.coefs`: Mean values of the parameter estimates, derived from the bootstrap coefficients.
- `boot.sds`: Standard deviations of cluster bootstrap parameter estimates.
- `ci.level`: User defined confidence interval level.
- `percentile.interval`: Confidence interval based on percentiles, given the user defined confidence interval level.
clusbootsample

parametric.interval
Confidence interval based on \texttt{lm.coefs} and column standard deviations of coefficients, given the user defined confidence interval level.

BCa.interval
Confidence interval based on percentiles with bias correction and acceleration, given the user defined confidence interval level.

samples.with.NA.coef
Cluster bootstrap sample numbers with at least one coefficient being NA.

failed.bootstrap.samples
For each of the coefficients, the number of failed bootstrap samples are given.

Author(s)
Mathijs Deen, Mark de Rooij

Examples

```r
## Not run:
data(opposites)
clusbootglm(SCORE\nobsm\n Time\nobsm\n COG, data=opposites, clusterid=Subject)
## End(Not run)
```

clusbootsample

\textit{Return data for specified bootstrap sample}

Description

Returns the full data frame for a specified bootstrap sample in a \texttt{clusbootglm} object.

Usage

\texttt{clusbootsample(object, samplenr)}

Arguments

- \texttt{object} \quad object of class \texttt{clusbootglm}, created with the \texttt{clusbootglm} function.
- \texttt{samplenr} \quad sample number for which the data frame should be returned.

Author(s)
Mark de Rooij, Mathijs Deen

Examples

```r
## Not run:
data(opposites)
cbglm.1 <- clusbootglm(SCORE\nobsm\n Time\nobsm\n COG, data=opposites, clusterid=Subject)
clusbootsample(cbglm.1, samplenr=1)
## End(Not run)
```
**coef.clusbootglm**

*Obtain coefficients from cluster bootstrap object*

**Description**

Returns the coefficients of an object of class `clusbootglm`.

**Usage**

```r
## S3 method for class 'clusbootglm'
coef(object, type = "bootstrap", ...)  
```

**Arguments**

- `object`: Object of class `clusbootglm`.
- `type`: Type of coefficient (bootstrap or GLM).
- `...`: Other arguments.

**Author(s)**

Mathijs Deen

**Examples**

```r
## Not run:
data(opposites)
cbglm.1 <- clusbootglm(SCORE~Time*COG,data=opposites,clusterid=Subject)
coef(cbglm.1, type="bootstrap")
## End(Not run)
```

---

**confint.clusbootglm**

*Confidence intervals for cluster bootstrap model parameters*

**Description**

Computes confidence intervals for one or more parameters in a fitted GLM with the cluster bootstrap.

**Usage**

```r
## S3 method for class 'clusbootglm'
confint(object, parm = "all", level = 0.95,  
        type = "percentile", ...)  
```
opposites  5

**Arguments**

- **object**: object of class `clusbootglm`.
- **parm**: a specification of which parameters are to be given confidence intervals, either a vector of numbers or a vector of names. Defaults to all parameters.
- **level**: the required confidence level
- **type**: type of confidence level. Options are `percentile`, `parametric` and `BCa`.
- **...**: other arguments.

**Author(s)**

Mathijs Deen

**Examples**

```r
## Not run:
data(opposites)
cbglm.1 <- clusbootglm(SCORE~Time*COG, data=opposites, clusterid=subject)
confint(cbglm.1, parm=c("Time","COG"), level=.90, type="BCa")
## End(Not run)
```

### opposites

**Opposites naming data**

**Description**

The `opposites` dataframe consists of 144 observations within 36 individuals that completed an inventory that assesses their performance on a timed cognitive task called "opposites naming".

The dataset does not contain the empirical data within 35 individuals from the experiment by Willett (1988), but a simulation based on the multilevel model from Singer & Willett (2003) within 36 individuals.

**Usage**

`opposites`

**Format**

the following variables are available:

- **Subject**: subject indicator
- **Time**: a time variable, ranging 0-3
- **COG**: cognitive skill, measured once (at time=0)
- **SCORE**: score on opposites naming task
References

---

**summary.clusbootglm**  
*Summarize output of cluster bootstrap GLM*

**Description**

Returns the summary of an object of class `clusbootglm`.

**Usage**

```r
## S3 method for class 'clusbootglm'
summary(object, interval.type = "BCa", ...)
```

**Arguments**

- `object`  
  object of class `clusbootglm`.
- `interval.type`  
  which confidence interval should be used. Options are `parametric`, `percentile` and `BCa` intervals.
- `...`  
  other arguments.

**Author(s)**

Mathijs Deen

**Examples**

```r
## Not run:
data(opposites)
cbgm.1 <- clusbootglm(SCORE~Time*COG, data=opposites, clusterid=Subject)
summary(cbgm.1, interval.type="percentile")
## End(Not run)
