Package ‘DSLite’

June 23, 2021

Type Package

Version 1.3.0

Title 'DataSHIELD' Implementation on Local Datasets

Depends R (>= 3.5.0), DSI (>= 1.3), methods, R6

Suggests resourcer, knitr, testthat, rmarkdown

Description 'DataSHIELD' is an infrastructure and series of R packages that enables the remote and 'non-disclosive' analysis of sensitive research data. This 'DataSHIELD Interface' implementation is for analyzing datasets living in the current R session. The purpose of this is primarily for lightweight 'DataSHIELD' analysis package development.

CNSIM1

Simulated dataset CNSIM 1

Description

Simulated dataset CNSIM 1, in a data.frame with 2163 observations of 11 harmonized variables. The CNSIM dataset contains synthetic data based on a model derived from the participants of the 1958 Birth Cohort, as part of the obesity methodological development project. This dataset does contain some NA values.

---

**defaultDSConfiguration**

*Default DataSHIELD configuration*
Description
Find the R packages that have DataSHIELD server configuration information in them and extract this information in a data frame of aggregation/assignment methods and a named list of R options. The DataSHIELD packages can be filtered by specifying explicitly the package names to be included or excluded. The package exclusion prevails over the inclusion.

Usage

defaultDSConfiguration(include = NULL, exclude = NULL)

Arguments

include Character vector of package names to be explicitly included. If NULL, do not filter packages.

exclude Character vector of package names to be explicitly excluded. If NULL, do not filter packages.

Examples

{
  # detect DS packages
defaultDSConfiguration()
  # exclude a DS package
defaultDSConfiguration(exclude="dsBase")
  # include explicitly some DS packages
defaultDSConfiguration(include=c("dsBase", "dsOmics"))
}

DISCORDANT STUDY 1

Simulated dataset DISCORDANT 1

Description
Simulated dataset DISCORDANT 1, in a data.frame with 12 observations of 2 discordant variables.

Details

<table>
<thead>
<tr>
<th>Variable</th>
<th>Description</th>
<th>Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>

</tbody>
</table>

**dsAggregate,DSLiteConnection-method**  
*Aggregate data*

**Description**
Aggregate some data from the DataSHIELD R session using a valid R expression. The aggregation expression must satisfy the data repository’s DataSHIELD configuration.
Usage

## S4 method for signature 'DSLiteConnection'

dsAggregate(conn, expr, async = TRUE)

Arguments

- **conn**: DDLiteConnection-class object.
- **expr**: Expression to evaluate.
- **async**: Whether the result of the call should be retrieved asynchronously. When TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

Value

A DDLiteResult-class object.
dsAssignResource, DSLiteConnection-method

**Assign a resource**

**Description**

Assign a DSLite resource in the DataSHIELD R session.

**Usage**

```r
## S4 method for signature 'DSLiteConnection'
dsAssignResource(conn, symbol, resource, async = TRUE)
```

**Arguments**

- `conn`: DSLiteConnection-class object.
- `symbol`: Name of the R symbol.
- `resource`: Fully qualified name of a resource object living in the DSLite server.
- `async`: Whether the result of the call should be retrieved asynchronously. When TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

**Value**

A DSLiteResult-class object.

---

dsAssignTable, DSLiteConnection-method

**Assign a table**

**Description**

Assign a DSLite dataset in the DataSHIELD R session.

**Usage**

```r
## S4 method for signature 'DSLiteConnection'
dsAssignTable(
  conn,
  symbol,
  table,
  variables = NULL,
  missings = FALSE,
  identifiers = NULL,
  id.name = NULL,
  async = TRUE
)
```
dsConnect,DSLiteDriver-method

Connect to a DSLite server

Arguments

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>conn</td>
<td>DSLiteConnection-class object.</td>
</tr>
<tr>
<td>symbol</td>
<td>Name of the R symbol.</td>
</tr>
<tr>
<td>table</td>
<td>Fully qualified name of a dataset living in the DSLite server.</td>
</tr>
<tr>
<td>variables</td>
<td>The variable names to be filtered in.</td>
</tr>
<tr>
<td>missings</td>
<td>Ignored.</td>
</tr>
<tr>
<td>identifiers</td>
<td>Name of the identifiers mapping to use when assigning entities to R (currently NOT supported by DSLite).</td>
</tr>
<tr>
<td>id.name</td>
<td>Name of the column that will contain the entity identifiers. If not specified, the identifiers will be the data frame row names. When specified this column can be used to perform joins between data frames.</td>
</tr>
<tr>
<td>async</td>
<td>Whether the result of the call should be retrieved asynchronously. When TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.</td>
</tr>
</tbody>
</table>

Value

A DSLiteResult-class object.

Description

Connect to a DSLite server, with provided datasets symbol names.

Usage

```r
## S4 method for signature 'DSLiteDriver'
dsConnect(drv, name, url, restore = NULL, profile = NULL, ...)
```

Arguments

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>drv</td>
<td>DSLiteDriver-class class object.</td>
</tr>
<tr>
<td>name</td>
<td>Name of the connection, which must be unique among all the DataSHIELD connections.</td>
</tr>
<tr>
<td>url</td>
<td>A R symbol that refers to a DSLiteServer object that holds the datasets of interest. The option &quot;datashield.env&quot; can be used to specify where to search for this symbol value. If not specified, the environment is the global one.</td>
</tr>
<tr>
<td>restore</td>
<td>Workspace name to be restored in the newly created DataSHIELD R session.</td>
</tr>
<tr>
<td>profile</td>
<td>Name of the profile that will be given to the DSLiteServer configuration. Make different DSLiteServers to support different configurations.</td>
</tr>
<tr>
<td>...</td>
<td>Unused, needed for compatibility with generic.</td>
</tr>
</tbody>
</table>
dsDisconnect, DSliteConnection-method

Disconnect from a DSlite server

Description
Save the session in a local file if requested.

Usage
## S4 method for signature 'DSliteConnection'
dsDisconnect(conn, save = NULL)

Arguments
- conn: DSliteConnection-class object
- save: Save the DataSHIELD R session with provided ID (must be a character string).

Value
A DSliteConnection-class object.

dsFetch, DSliteResult-method

Fetch the result

Description
Fetch the DataSHIELD operation result.

Usage
## S4 method for signature 'DSliteResult'
dsFetch(res)

Arguments
- res: DSliteResult-class object.

Value
TRUE if table exists.
dsGetInfo, DSLiteResult-method

Get result info

Description

Get the information about a command (if still available).

Usage

```r
## S4 method for signature 'DSLiteResult'
dsGetInfo(dsObj, ...)
```

Arguments

- `dsObj`: DLSiteResult-class class object
- `...`: Unused, needed for compatibility with generic.

Value

The result information, including its status.

dsHasResource, DSLiteConnection-method

Verify DLSite server resource

Description

Verify resource exists and can be accessible for performing DataSHIELD operations.

Usage

```r
## S4 method for signature 'DSLiteConnection'
dsHasResource(conn, resource)
```

Arguments

- `conn`: DLSiteConnection-class class object.
- `resource`: The fully qualified name of the resource.

Value

TRUE if dataset exists.
dsHasTable, DSLiteConnection-method

**Verify DSLite server dataset**

**Description**

Verify dataset exists and can be accessible for performing DataSHIELD operations.

**Usage**

```r
## S4 method for signature 'DSLiteConnection'
dsHasTable(conn, table)
```

**Arguments**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>conn</code></td>
<td>DSLiteConnection-class class object.</td>
</tr>
<tr>
<td><code>table</code></td>
<td>The fully qualified name of the dataset.</td>
</tr>
</tbody>
</table>

**Value**

TRUE if dataset exists.

---

dsIsAsync, DSLiteConnection-method

**DSLite asynchronous support**

**Description**

No asynchronicity on any DataSHIELD operations.

**Usage**

```r
## S4 method for signature 'DSLiteConnection'
dsIsAsync(conn)
```

**Arguments**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>conn</code></td>
<td>DSLiteConnection-class class object</td>
</tr>
</tbody>
</table>

**Value**

The named list of logicals detailing the asynchronicity support.
dsIsCompleted, DSLiteResult-method

Get whether the operation is completed

Description
Always TRUE because of synchronous operations.

Usage
```r
## S4 method for signature 'DSLiteResult'
 dsIsCompleted(res)
```

Arguments
- `res` DSLiteResult-class object.

Value
Always TRUE.

dsKeepAlive, DSLiteConnection-method

Keep connection with a DSLite server alive

Description
No operation due to the DSLiteServer nature.

Usage
```r
## S4 method for signature 'DSLiteConnection'
 dsKeepAlive(conn)
```

Arguments
- `conn` DSLiteConnection-class class object
dsListMethods, DSLiteConnection-method

*List methods*

**Description**

List methods defined in the DataSHIELD configuration.

**Usage**

```r
## S4 method for signature 'DSLiteConnection'
dsListMethods(conn, type = "aggregate")
```

**Arguments**

- `conn`: `DSLiteConnection-class` class object
- `type`: Type of the method: "aggregate" (default) or "assign".

**Value**

A data frame.

---

dsListPackages, DSLiteConnection-method

*List packages*

**Description**

List packages defined in the DataSHIELD configuration.

**Usage**

```r
## S4 method for signature 'DSLiteConnection'
dsListPackages(conn)
```

**Arguments**

- `conn`: `DSLiteConnection-class` class object

**Value**

A data frame.
dsListProfiles, DSLiteConnection-method

List profiles defined in the DataSHIELD configuration.

**Usage**

```r
## S4 method for signature 'DSLiteConnection'
dsListProfiles(conn)
```

**Arguments**

- `conn` *DSLiteConnection-class* class object

**Value**

A list containing the "available" character vector of profile names and the "current" profile (in case a default one was assigned).

dsListResources, DSLiteConnection-method

List DSLite server resources

**Description**

List resource names living in the DSLite server for performing DataSHIELD operations.

**Usage**

```r
## S4 method for signature 'DSLiteConnection'
dsListResources(conn)
```

**Arguments**

- `conn` *DSLiteConnection-class* class object

**Value**

The fully qualified names of the resources.
dsListSymbols, DSLiteConnection-method

List R symbols

Description

List symbols living in the DataSHIELD R session.

Usage

## S4 method for signature 'DSLiteConnection'
dsListSymbols(conn)

Arguments

conn  
DSLiteConnection-class class object

Value

A character vector.

dsListTables, DSLiteConnection-method

List DSLite server datasets

Description

List dataset names living in the DSLite server for performing DataSHIELD operations.

Usage

## S4 method for signature 'DSLiteConnection'
dsListTables(conn)

Arguments

conn  
DSLiteConnection-class class object

Value

The fully qualified names of the tables.
**dsListWorkspaces, DSLiteConnection-method**

*List workspaces*

**Description**

List workspaces saved in the data repository.

**Usage**

```r
## S4 method for signature 'DSLiteConnection'
dsListWorkspaces(conn)
```

**Arguments**

- `conn`  
  DSSLiteConnection-class class object

**Value**

A data frame.

---

**DSLite**

*Create a DSSLite driver*

**Description**

Convenient function for creating a DSSLiteDriver object.

**Usage**

```r
DSLite()
```
DSLiteServer

Description

DSLiteServer mimics a DataSHIELD server by holding datasets and exposing DataSHIELD-like functions: aggregate and assign. A DataSHIELD session is a R environment where the assignment and the operations happen.

Methods

Public methods:

- DSLiteServer$new()
- DSLiteServer$config()
- DSLiteServer$profile()
- DSLiteServer$strict()
- DSLiteServer$home()
- DSLiteServer$workspaces()
- DSLiteServer$workspace_save()
- DSLiteServer$workspace_rm()
- DSLiteServer$aggregateMethods()
- DSLiteServer$aggregateMethod()
- DSLiteServer$assignMethods()
- DSLiteServer$assignMethod()
- DSLiteServer$options()
- DSLiteServer$option()
- DSLiteServer$newSession()
- DSLiteServer$hasSession()
- DSLiteServer$getSession()
- DSLiteServer$getSessionIds()
- DSLiteServer$getSessionData()
- DSLiteServer$closeSession()
- DSLiteServer$tableNames()
- DSLiteServer$hasTable()
- DSLiteServer$resourceNames()
- DSLiteServer$hasResource()
- DSLiteServer$symbols()
- DSLiteServer$symbol_rm()
- DSLiteServer$assignTable()
- DSLiteServer$assignResource()
- DSLiteServer$assignExpr()
- DSLiteServer$aggregate()
• `DSLiteServer$clone()`

**Method new()**: Create new DLSiteServer instance. See `defaultDSConfiguration` function for including or excluding packages when discovering the DataSHIELD configuration from the DataSHIELD server-side packages (meta-data from the DESCRIPTION files).

**Usage:**
```
DSLiteServer$new(
  tables = list(),
  resources = list(),
  config = DLSite::defaultDSConfiguration(),
  strict = TRUE,
  home = file.path(tempdir(), ".dslite"),
  profile = "default"
)
```

**Arguments:**
- `tables`: A named list of data.frames representing the harmonized tables.
- `resources`: A named list of `resourcer::Resource` objects representing accessible data or computation resources.
- `config`: The DataSHIELD configuration. Default is to discover it from the DataSHIELD server-side R packages.
- `strict`: Logical to specify whether the DataSHIELD configuration must be strictly applied. Default is `TRUE`.
- `home`: Folder location where are located the session work directory and where to read and dump workspace images.
- `profile`: The DataSHIELD profile name, used to give a name to the DS configuration. Default is "default". Default is in a hidden folder of the R session’s temporary directory.

**Returns**: A DLSiteServer object

**Method config()**: Get or set the DataSHIELD configuration.

**Usage:**
```
DSLiteServer$config(value)
```

**Arguments**:
- `value`: The DataSHIELD configuration: aggregate/assign methods in data frames and a named list of options.

**Returns**: The DataSHIELD configuration, if no parameter is provided.

**Method profile()**: Get or set the DataSHIELD profile name.

**Usage**:
```
DSLiteServer$profile(value)
```

**Arguments**:
- `value`: The DataSHIELD profile name.

**Returns**: The DataSHIELD profile, if no parameter is provided.

**Method strict()**: Get or set the level of strictness (stop when function call is not configured)
Usage:
DSLiteServer$strict(value)

Arguments:
value The strict logical field.

Returns: The strict field if no parameter is provided.

Method home(): Get or set the home folder location where are located the session work directories and where to read and dump workspace images.

Usage:
DSLiteServer$home(value)

Arguments:
value The path to the home folder.

Returns: The home folder path if no parameter is provided.

Method workspaces(): List the saved workspaces in the home folder.

Usage:
DSLiteServer$workspaces(prefix = NULL)

Arguments:
prefix Filter workspaces starting with provided prefix (optional).

Method workspace_save(): Save the session’s workspace image identified by the sid identifier with the provided name in the home folder.

Usage:
DSLiteServer$workspace_save(sid, name)

Arguments:
sid, Session ID
name The name to be given to the workspace’s image.

Method workspace_rm(): Remove the workspace image with the provided name from the home folder.

Usage:
DSLiteServer$workspace_rm(name)

Arguments:
name The name of the workspace.

Method aggregateMethods(): Get or set the aggregate methods.

Usage:
DSLiteServer$aggregateMethods(value)

Arguments:
value A data.frame with columns: name (the client function call), value (the translated server call), package (relevant when extracted from a DataSHIELD server-side package), version (relevant when extracted from a DataSHIELD server-side package), type ("aggregate"), class ("function" for package functions or "script" for custom scripts).
Returns: The aggregate methods when no parameter is provided.

Method aggregateMethod(): Get or set an aggregate method.

Usage:
DSLiteServer$aggregateMethod(name, value)

Arguments:
name The client function call.
value The translated server call: either a package function reference or function expression.
Remove the method when NULL.

Returns: The aggregate method when no value parameter is provided.

Method assignMethods(): Get or set the assign methods.

Usage:
DSLiteServer$assignMethods(value)

Arguments:
value A data.frame with columns: name (the client function call), value (the translated server call), package (relevant when extracted from a DataSHIELD server-side package), version (relevant when extracted from a DataSHIELD server-side package), type ("assign"), class ("function" for package functions or "script" for custom scripts).

Returns: The assign methods when no parameter is provided.

Method assignMethod(): Get or set an assign method.

Usage:
DSLiteServer$assignMethod(name, value)

Arguments:
name The client function call.
value The translated server call: either a package function reference or function expression.
Remove the method when NULL.

Returns: The assign method when no value parameter is provided.

Method options(): Get or set the DataSHIELD R options that are applied when a new DataSHIELD session is started.

Usage:
DSLiteServer$options(value)

Arguments:
value A named list of options.

Returns: The R options when no parameter is provided.

Method option(): Get or set a R option.

Usage:
DSLiteServer$option(key, value)

Arguments:
key  The R option’s name.
value  The R option’s value. Remove the option when NULL.

Returns:  The R option’s value when only key parameter is provided.

**Method** newSession(): Create a new DataSHIELD session (contained execution environment),
apply options that are defined in the DataSHIELD configuration and restore workspace image if
restore workspace name argument is provided.

*Usage:*
DSLiteServer$newSession(restore = NULL, profile = NULL)

*Arguments:*
restore  The workspace image to be restored (optional).
profile  The requested profile name (optional). If provided, new session creation will fail in
case it does not match the server’s profile name.

**Method** hasSession(): Check a DataSHIELD session is alive.

*Usage:*
DSLiteServer$hasSession(sid)

*Arguments:*
sid  The session ID.

**Method** getSession(): Get the DataSHIELD session’s environment.

*Usage:*
DSLiteServer$getSession(sid)

*Arguments:*
sid  The session ID.

**Method** getSessionIds(): Get the DataSHIELD session IDs.

*Usage:*
DSLiteServer$getSessionIds()

**Method** getSessionData(): Get the symbol value from the DataSHIELD session’s environment.

*Usage:*
DSLiteServer$getSessionData(sid, symbol)

*Arguments:*
sid  The session ID.
symbol  The symbol name.

**Method** closeSession(): Destroy DataSHIELD session and save workspace image if save
workspace name argument is provided.

*Usage:*
DSLiteServer$closeSession(sid, save = NULL)

*Arguments:*

sid The session ID.
save The name of the workspace image to be saved (optional).

**Method tableNames():** List the names of the tables that can be assigned.

*Usage:*

```r
dslitestserver$tableNames()
```

**Method hasTable():** Check a table exists.

*Usage:*

```r
dslitestserver$hasTable(name)
```

*Arguments:*

name The table name to be looked for.

**Method resourceNames():** List the names of the resources (resourcer::Resource objects) that can be assigned.

*Usage:*

```r
dslitestserver$resourceNames()
```

**Method hasResource():** Check a resource (resourcer::Resource object) exists.

*Usage:*

```r
dslitestserver$hasResource(name)
```

*Arguments:*

name The resource name to be looked for.

**Method symbols():** List the symbols living in a DataSHIELD session.

*Usage:*

```r
dslitestserver$symbols(sid)
```

*Arguments:*

sid The session ID.

**Method symbol_rm():** Remove a symbol from a DataSHIELD session.

*Usage:*

```r
dslitestserver$symbol_rm(sid, name)
```

*Arguments:*

sid The session ID.

name The symbol name.

**Method assignTable():** Assign a table to a symbol in a DataSHIELD session. Filter table columns with the variables names provided.

*Usage:*

```r
dslitestserver$assignTable(sid, symbol, name, variables = NULL, id.name = NULL)
```

*Arguments:*

sid The session ID.
symbol The symbol to be assigned.
name The table’s name.
variables The variable names to be filtered in (optional).
id.name The column name to be used for the entity’s identifier (optional).

**Method** `assignResource()`: Assign a resource as a `resourcer::ResourceClient` object to a symbol in a DataSHIELD session.

*Usage:*

```r
DSLiteServer$assignResource(sid, symbol, name)
```

*Arguments:*

- `sid` The session ID.
- `symbol` The symbol name.
- `name` The name of the resource.

**Method** `assignExpr()`: Evaluate an assignment expression in a DataSHIELD session.

*Usage:*

```r
DSLiteServer$assignExpr(sid, symbol, expr)
```

*Arguments:*

- `sid` The session ID.
- `symbol` The symbol name.
- `expr` The R expression to evaluate.

**Method** `aggregate()`: Evaluate an aggregate expression in a DataSHIELD session.

*Usage:*

```r
DSLiteServer$aggregate(sid, expr)
```

*Arguments:*

- `sid` The session ID.
- `expr` The R expression to evaluate.

**Method** `clone()`: The objects of this class are cloneable with this method.

*Usage:*

```r
DSLiteServer$clone(deep = FALSE)
```

*Arguments:*

- `deep` Whether to make a deep clone.

**See Also**

Other server-side items: `newDSLiteServer()`
dsRmSymbol, DSLiteConnection-method  

*Remove a R symbol*

**Description**

Remove a symbol living in the DataSHIELD R session.

**Usage**

```r
## S4 method for signature 'DSLiteConnection'
dsRmSymbol(conn, symbol)
```

**Arguments**

- **conn**  
  DSLiteConnection-class class object

- **symbol**  
  Name of the R symbol.

---

dsRmWorkspace, DSLiteConnection-method  

*Remove a workspace*

**Description**

Remove a workspace on the data repository.

**Usage**

```r
## S4 method for signature 'DSLiteConnection'
dsRmWorkspace(conn, name)
```

**Arguments**

- **conn**  
  DSLiteConnection-class class object

- **name**  
  Name of the workspace.
dsSaveWorkspace, DSLiteConnection-method

Save workspace

Description

Save workspace on the data repository.

Usage

```r
## S4 method for signature 'DSLiteConnection'
dsSaveWorkspace(conn, name)
```

Arguments

- `conn` : DDLiteConnection-class class object
- `name` : Name of the workspace.

getDSLiteData: Get data value from DDLite connection(s)

Description

Get the data value corresponding to the variable with the symbol name from the DDLiteServer associated to the DSSConnection-class object(s). Can be useful when developing a DataSHIELD package.

Usage

```r
getDSLiteData(conns, symbol)
```

Arguments

- `conns` : DSSConnection-class object or a list of DSSConnection-classes.
- `symbol` : Symbol name identifying the variable in the DDLiteServer’s "server-side" environment(s).

Value

The data value or a list of values depending on the connections parameter. The value is NA when the connection object is not of class DDLiteConnection-class.
Examples

```r
# DataSHIELD login
logindata <- setupCNSIMTest()
conns <- datashield.login(logindata, assign=TRUE)
# retrieve symbol D value from each DataSHIELD connections
getDSLiteData(conns, "D")
# retrieve symbol D value from a specific DataSHIELD connection
getDSLiteData(conns$sim1, "D")
```

Description

DataSHIELD login data.frame for connecting with CNSIM datasets. The CNSIM datasets contain synthetic data based on a model derived from the participants of the 1958 Birth Cohort, as part of the obesity methodological development project. These datasets do contain some NA values.

newDSLiteServer  
*Create a new DSLite server*

**Description**

Shortcut function to create a new DSLiteServer instance.

**Usage**

```r
newDSLiteServer(
  tables = list(),
  resources = list(),
  config = DSLite::defaultDSConfiguration(),
  strict = TRUE,
  home = file.path(tempdir(), ".dslite")
)
```

**Arguments**

- **tables**  
  A named list of data.frames representing the harmonized tables.

- **resources**  
  A named list of resourcer::Resource objects representing accessible data or computation resources.

- **config**  
  The DataSHIELD configuration. Default is to discover it from the DataSHIELD server-side R packages. See `defaultDSConfiguration` function for including or excluding packages when discovering the DataSHIELD configuration from the DataSHIELD server-side packages (meta-data from the DESCRIPTION files).

- **strict**  
  Logical to specify whether the DataSHIELD configuration must be strictly applied. Default is TRUE.

- **home**  
  Folder location where are located the session work directory and where to read and dump workspace images. Default is in a hidden folder of the R session's temporary directory.

**See Also**

Other server-side items: `DSLiteServer`

---

setupCNSIMTest  
*Setup a test environment based on the CNSIM simulated datasets*

**Description**

Load the CNSIM datasets, the corresponding login data object, instanciate a new DSLiteServer hosting these datasets and verify that the required DataSHIELD server-side packages are installed.
**Usage**

```
setupCNSIMTest(packages = c(), env = parent.frame())
```

**Arguments**

- **packages**: DataSHIELD server-side packages which local installation must be verified so that the DSLiteServer can auto-configure itself and can execute the DataSHIELD operations. Default is none.
- **env**: The environment where DataSHIELD objects should be looked for: the DSLiteServer and the DSIContext objects. Default is the Global environment.

**Value**

The login data for the `datashield.login` function.

**See Also**

Other setup functions: `setupDASIMTest()`, `setupDATASETTest()`, `setupDISCORDANTTest()`, `setupDSLiteServer()`, `setupSURVIVALTest()`

**Examples**

```
{  
  logindata <- setupCNSIMTest()  
  conns <- datashield.login(logindata, assign=TRUE)  
  # do DataSHIELD analysis  
  datashield.logout(conns)  
}
```

---

**Description**

Load the DASIM datasets, the corresponding login data object, instantiate a new DSLiteServer hosting these datasets and verify that the required DataSHIELD server-side packages are installed.

**Usage**

```
setupDASIMTest(packages = c(), env = parent.frame())
```

**Arguments**

- **packages**: DataSHIELD server-side packages which local installation must be verified so that the DSLiteServer can auto-configure itself and can execute the DataSHIELD operations. Default is none.
- **env**: The environment where DataSHIELD objects should be looked for: the DSLiteServer and the DSIContext objects. Default is the Global environment.
setupDATASETTest

Value
The login data for the datashield.login function.

See Also
Other setup functions: setupCNSIMTest(), setupDATASETTest(), setupDISCORDANTTest(), setupDSLiteServer(), setupSURVIVALTest()

Examples
{
  logindata <- setupDASIMTest()
  conns <- datashield.login(logindata, assign=TRUE)
  # do DataSHIELD analysis
  datashield.logout(conns)
}

Description
Load the TESTING.DATASET datasets, the corresponding login data object, instanciate a new DSLiteServer hosting these datasets and verify that the required DataSHIELD server-side packages are installed.

Usage
setupDATASETTest(packages = c(), env = parent.frame())

Arguments
packages DataSHIELD server-side packages which local installation must be verified so that the DSLiteServer can auto-configure itself and can execute the DataSHIELD operations. Default is none.

env The environment where DataSHIELD objects should be looked for: the DSLiteServer and the DSIConnection objects. Default is the Global environment.

Value
The login data for the datashield.login function.

See Also
Other setup functions: setupCNSIMTest(), setupDASIMTest(), setupDISCORDANTTest(), setupDSLiteServer(), setupSURVIVALTest()
setupDISCORDANTTest

Examples

```r
{
  logindata <- setupDATASETTest()
  conns <- datashield.login(logindata, assign=TRUE)
  # do DataSHIELD analysis
  datashield.logout(conns)
}
```

setupDISCORDANTTest  Setup a test environment based on the DISCORDANT simulated datasets

Description

Load the DISCORDANT datasets, the corresponding login data object, instantiate a new DSI-Lite-Server hosting these datasets and verify that the required DataSHIELD server-side packages are installed.

Usage

```r
setupDISCORDANTTest(packages = c(), env = parent.frame())
```

Arguments

- **packages**: DataSHIELD server-side packages which local installation must be verified so that the DSI-Lite-Server can auto-configure itself and can execute the DataSHIELD operations. Default is none.
- **env**: The environment where DataSHIELD objects should be looked for: the DSI-Lite-Server and the DSICConnection objects. Default is the Global environment.

Value

The login data for the datashield.login function.

See Also

Other setup functions: `setupCNSIMTest()`, `setupDASIMTest()`, `setupDATASETTest()`, `setupDSLiteServer()`, `setupSURVIVALTest()`

Examples

```r
{
  logindata <- setupDISCORDANTTest()
  conns <- datashield.login(logindata, assign=TRUE)
  # do DataSHIELD analysis
  datashield.logout(conns)
}
```
setupDSLiteServer

**setupDSLiteServer**

Setup an environment based on named datasets and logindata

**Description**

Load the provided datasets and the corresponding logindata object, instantiate a new `DSLiteServer` hosting these datasets, verifies that the required DataSHIELD server-side packages are installed. All the data structures are loaded by `data` which supports various formats (see `data()` documentation).

**Usage**

```r
setupDSLiteServer(
  packages = c(),
  datasets,
  logindata,
  pkgs = NULL,
  dslite.server = NULL,
  env = parent.frame()
)
```

**Arguments**

- `packages` - DataSHIELD server-side packages which local installation must be verified so that the `DSLiteServer` can auto-configure itself and can execute the DataSHIELD operations. Default is none.
- `datasets` - Names of the datasets to be loaded using `data`. Default is none.
- `logindata` - Name of the login data object to be loaded using `data`. Default is none.
- `pkgs` - The package(s) to look in for datasets, default is all, then the `data` subdirectory (if present) of the current working directory (same behavior as `package` argument in `data`).
- `dslite.server` - Symbol name to which the `DSLiteServer` should be assigned to. If not provided, the symbol name will be the first not null one specified in the `url` column of the loaded login data.
- `env` - The environment where DataSHIELD objects should be looked for: the `DSLiteServer` and the `DSIConnection` objects. Default is the Global environment.

**Value**

The login data for the `datashield.login` function.

**See Also**

Other setup functions: `setupCNSIMTest()`, `setupDASIMTest()`, `setupDATASETTest()`, `setupDISCORDANTTest()`, `setupSURVIVALTest()`
setupSURVIVALTest

Examples

\{
    logindata <- setupDSLiteServer(
        datasets = c("CNSIM1", "CNSIM2", "CNSIM3"),
        logindata = "logindata.dslite.cnsim", pkgs = "DSLite",
        dslite.server = "dslite.server")
    conns <- datashield.login(logindata, assign=TRUE)
    # do DataSHIELD analysis
    datashield.logout(conns)
\}

setupSURVIVALTest  \hspace{1cm} \textit{Setup a test environment based on the SURVIVAL (EXPAND_WITH_MISSING) simulated datasets}

Description

Load the SURVIVAL (EXPAND_WITH_MISSING) datasets, the corresponding login data object, instantiate a new DSLiteServer hosting these datasets and verify that the required DataSHIELD server-side packages are installed.

Usage

setupSURVIVALTest(packages = c(), env = parent.frame())

Arguments

packages  \hspace{1cm} \text{DataSHIELD server-side packages which local installation must be verified so that the DSLiteServer can auto-configure itself and can execute the DataSHIELD operations. Default is none.}

env  \hspace{1cm} \text{The environment where DataSHIELD objects should be looked for: the DSLiteServer and the DSIConnection objects. Default is the Global environment.}

Value

The login data for the datashield.login function.

See Also

Other setup functions: setupCNSIMTest(), setupDASIMTest(), setupDATASE(Test), setupDISCORDANTTest(), setupDSLiteServer()
Examples
{
  logindata <- setupSURVIVALTest()
  conns <- datashield.login(logindata, assign=TRUE)
  # do DataSHIELD analysis
  datashield.logout(conns)
}

Simulated survival expand-with-missing dataset 1

Description

Simulated dataset SURVIVAL.EXPAND_WITH_MISSING 1, in a data.frame with 2060 observations of 12 harmonized variables. The dataset contains synthetic data based on a simulated survival model, including a censoring indicator.

Simulated survival expand-with-missing dataset 2
Description

Simulated dataset SURVIVAL.EXPAND_WITH_MISSING 2, in a data.frame with 1640 observations of 12 harmonized variables. The dataset contains synthetic data based on a simulated survival model, including a censoring indicator.

Description

Simulated dataset SURVIVAL.EXPAND_WITH_MISSING 3, in a data.frame with 2688 observations of 12 harmonized variables. The dataset contains synthetic data based on a simulated survival model, including a censoring indicator.
