

Package ‘DominoDataCapture’

November 7, 2021

Language en-US

Type Package

Title Domino Data Capture

Version 0.1.1

Date 2021-11-05

Description Instrument prediction code that lets you capture inputs to the model, predictions, prediction properties, and other metadata.

License MIT + file LICENSE

Encoding UTF-8

Suggests covr, DT, lintr, testthat, spelling, rhub, mockery

DataCaptureClient-class

Data Capture Client Class

Description

Data Capture Client

Details

Data Capture Client to help capture prediction data

Fields

feature_names array of feature names
predict_names array of prediction names
metadata_names array of metadata names
instance_id string containing a unique instance id

Examples

```
library(DominoDataCapture)
data_capture_client <- DataCaptureClient(
  feature_names = c("sepal.length", "sepal.width", "petal.length"),
  predict_names = c("variety")
)
data_capture_client$capturePrediction(
  feature_values = c(sepal_length, sepal_width, petal_length),
  predict_values = c(predicted_value),
  event_id = event_id
)
```
