Package ‘KCSNBShiny’

July 1, 2019

Type Package
Title Naive Bayes Classifier
Version 0.1.0
Author Karne Chaithanya Sai
Maintainer Karne Chaithanya Sai <karnechaithanyasai@gmail.com>
Description Predicts any variable in any categorical dataset for given values of predictor variables.
   If a dataset contains 4 variables, then any variable can be predicted based on the values of the other three variables given by the user.
   The user can upload their own datasets and select what variable they want to predict.
   A 'handsontable' is provided to enter the predictor values and also accuracy of the prediction is also shown.
License GPL-2
LazyData FALSE

### Description

Predicts any variable in any categorical dataset for given values of predictor variables. If a dataset contains 4 variables, then any variable can be predicted based on the values of the other three variables given by the user. The user can upload their own datasets and select what variable they want to predict. A handsontable is provided to enter the predictor values and also accuracy of the prediction is also shown.

### Usage

```r
KCSNBShiny()
```

### Examples

```r
if(interactive())(KCSNBShiny())
```
