An Overview of the NMOF Package
Enrico Schumann
es@enricoschumann.net

1 The book and the package

1.1 The book

‘Numerical Methods and Optimization in Finance’ (NMOF, Gilli et al. [2019]) is about tools for computational finance, with emphasis on simulation and optimisation. Many chapters are organised as case studies, covering topics such as portfolio insurance or the valuation of financial derivatives. In particular, several chapters explain optimisation heuristics and show in detail how to use these methods for portfolio selection or the calibration of option pricing models. Some highlights:

- Simulation: how to create random variates under specified marginal distributions; how to induce cross-sectional correlation (beyond Cholesky for Gaussian variates) and serial dependencies; examples for copulae; resampling, bootstrapping data sets.

- Option pricing: binomial trees, finite differences and Monte Carlo simulation; but also integration methods for pricing with the characteristic function (eg, Heston, Bates, Variance-Gamma). Calibration of surfaces under such models.

- Portfolio optimisation: methods to optimise portfolio under any objective function (eg, drawdown, partial moments) and constraints (eg, cardinality constraints). Sample programs for classical mean-variance analysis are also included.

- Yield-curve calibration: various strategies how to calibrate a yield-curve model: through fitting to bootstrapped yields, to bond prices or to yields-to-maturity.

1.2 The package

The NMOF package provides many of the code examples and data sets used in [Gilli et al. 2019]; it also contains several functions that have not been described in the book. Notably, the package provides implementations of a number of optimisation heuristics, among them Differential Evolution and Genetic Algorithms. There are also functions for valuing financial instruments, such as bonds and options, and helper functions for stochastic simulations.

2 What’s in the package

2.1 Optimisation

There are functions for Differential Evolution (DEopt), Genetic Algorithms (GAopt), (Stochastic) Local Search (LSopt), Particle Swarm (PSopt), Simulated Annealing (SAopt), Threshold Accepting (TAopt) and grid search (gridSearch).
2.2 Pricing financial instruments

For options, see vanillaOptionEuropean, vanillaOptionAmerican, putCallParity. For pricing methods that use the characteristic function, see callCF. For bond/bond-futures pricing, see vanillaBond, bundFuture and xtContractValue.

2.3 Simulation

See resampleC, mc and repairMatrix.

2.4 Datasets

See bundData, fundData and optionData.

2.5 Code examples from the book

All R code examples in the book can be displayed (and used) via the function showExample. Call it without any argument to see all examples.

> showExample()

```
Chapter      File
1  01_Introduction Introduction.R
2  03_Linear_equations_and_Least_Squares_problems Appendix_linear_systems.R
3  05_Binomial_trees Binomial_Trees.R
4  07_Modeling_dependencies Gaussian2.R
5  07_Modeling_dependencies Spearman.R
6  07_Modeling_dependencies rdni.R
7  07_Modeling_dependencies tria.R
8  12_Heuristic_methods_in_a_nutshell Appendix_NMDF_heuristics.R
9  12_Heuristic_methods_in_a_nutshell Heuristics.R
10 13_Heuristics_-_a_tutorial Heuristics_tutorial.R
```

[ reached 'max' / getOption("max.print") -- omitted 8 rows ]

2.6 Vignettes

The package comes with a number of tutorials, written as vignettes. See ?vignette for how to extract the code from these documents.

> vignette(package = "NMDF") ## display vignette titles

3 Other resources

3.1 Websites

The book’s website: [http://nmof.net](http://nmof.net)
The package’s website: [http://enricoschumann.net/NMDF](http://enricoschumann.net/NMDF)
The stable version is available from CRAN. The development version is available from [http://enricoschumann.net/R/packages/NMDF/index.htm](http://enricoschumann.net/R/packages/NMDF/index.htm)

To install the development version from an R session, type:
> install.packages("NMOF",
    repos = c("http://enricoschumann.net/R",
    getOption("repos")))

The package source code is also available in the GitHub repository
https://github.com/enricoschumann/NMOF
The book’s source code examples are available from GitLab:
https://gitlab.com/NMOF

3.2 Manual
A manual is available from http://enricoschumann.net/NMOF.htm#NMOFmanual, though it
is still work in process. The code examples from the manual are also available from that site.

3.3 Tests
A goal for the NMOF package is to provide reliable code. Thus, a large number of test cases is
included.

<table>
<thead>
<tr>
<th>Package version</th>
<th>2.0-1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of tests</td>
<td>2456</td>
</tr>
</tbody>
</table>

These tests are stored in subdirectory unitTests.

3.4 News, feedback and discussion
New package releases and other news related to the book or the package are announced on the
NMOF-news mailing list:
https://lists.r-forge.r-project.org/cgi-bin/mailman/listinfo/nmof-news
An RSS feed of the package NEWS file is available at
Applications, as long as they are finance-related, should be discussed on the R-SIG-Finance
mailing list:
https://stat.ethz.ch/mailman/listinfo/r-sig-finance
Please send bug reports or suggestions directly to the package maintainer, for instance by using
bug.report.

> library("utils")
> bug.report("[NMOF] Unexpected behaviour in function XXX",
    maintainer("NMOF"), package = "NMOF")
