Description

This functions reports whether RGui was started in \texttt{--mdi} or \texttt{--sdi} mode.

Usage

\texttt{ismdi()}

Value

\begin{itemize}
  \item \texttt{mdi} \hspace{1cm} Returns \texttt{TRUE}, if RGui was started in its default \texttt{--mdi} mode, else \texttt{FALSE}.
\end{itemize}

Description

These internal functions are not intended to be called by the user. Instead, a simple click into the menu is sufficient.

Usage

\begin{itemize}
  \item \texttt{getWinEdt()}
  \item \texttt{installWinEdt(InstallRoot, ApplData, WinEdtVersion, force = FALSE)}
  \item \texttt{startWinEdt(InstallRoot, ApplData, WinEdtVersion, args = NULL)}
\end{itemize}

Arguments

\begin{itemize}
  \item \texttt{InstallRoot} \hspace{1cm} The path where WinEdt is installed.
  \item \texttt{ApplData} \hspace{1cm} The path to the user’s Application Data directory of WinEdt.
  \item \texttt{WinEdtVersion} \hspace{1cm} WinEdt versions < 6 and \texttt{\geq 6} have to be handled very differently.
  \item \texttt{force} \hspace{1cm} If \texttt{FALSE} (default), no files of an already installed version of R-WinEdt are overwritten; if \texttt{TRUE} those files will be overwritten; if \texttt{NULL}, the user will be asked.
  \item \texttt{args} \hspace{1cm} Command line arguments to be passed to the WinEdt instance.
\end{itemize}
