Package ‘Rthingsboard’

January 19, 2022

Type Package
Title 'ThingsBoard' API
Version 0.2.7
Date 2022-01-18

Description
The goal of 'Rthingsboard' is to provide interaction with the API of 'ThingsBoard' (<https://thingsboard.io/>), an open-source IoT platform for device management, data collection, processing and visualization.

License AGPL-3
Encoding UTF-8
Imports httr, logger, methods, dplyr
Suggests badger, ggplot2, testthat
RoxygenNote 7.1.2

  ThingsboardApi_checkToken .............................................. 4
  ThingsboardApi_getKeys ................................................ 4
Date2EpochMilli

Convert a date into an epoch in milliseconds

Description
This function allows to convert epoch timestamp in seconds to an epoch in milliseconds

Usage
Date2EpochMilli(ts)

## S3 method for class 'POSIXt'
Date2EpochMilli(ts)

## S3 method for class 'numeric'
Date2EpochMilli(ts)

Arguments
- **ts**
  - a numeric representing an epoch in seconds or a POSIXt date

Value
- a character of the epoch in milliseconds

Examples
Date2EpochMilli(as.numeric(Sys.time()))

---

EpochMilli2Date

Convert an epoch in milliseconds into a date

Description
Convert an epoch in milliseconds into a date

Usage
EpochMilli2Date(x, timezone = "GMT")
Arguments

- `x` A character or a numeric representing an epoch in milliseconds
- `timezone` A character with the time zone used for the conversion

Value

A POSIXct, the date corresponding to the epoch

Examples

```r
epoch <- Date2EpochMilli(as.numeric(Sys.time()))
EpochMilli2Date(epoch)
```

---

**ThingsboardApi-class  
Thingboard API Class**

**Description**

Thingboard API Class

**Fields**

- `url` character URL of the 'ThingsBoard' IoT platform.
- `publicId` character the public ID of the device
- `token` character the current token
- `tokenTimeOut` A numeric contains the time out of a token in seconds (default 300)
- `tokenExpiration` A numeric with the Epoch of the expiration date time of current token

**See Also**

The `ThingsboardApi` class methods:

- `ThingsboardApi_checkToken` for checking and refreshing the token
- `ThingsboardApi_getToken` for getting authorisation token from Thingsboard server for a specific device
- `ThingsboardApi_getKeys` for fetching data keys of an entity
- `ThingsboardApi_getValues` and `ThingsboardApi_getTelemetry` for fetching telemetry of an entity
Examples

```r
thinksboard_api = tryCatch(
  {
    ThingsboardApi(url="http://scada.g-eau.fr",
                  publicId="299cedc0-f3e9-11e8-9dbf-cbc1e37c11e3")
  },
  error = function(e) {
    message("An error occured:\n", e)
    return(FALSE)
  }
)
```

**ThingsboardApi_checkToken**

*Check if the token is timeouted and refresh it if necessary*

**Description**

This method is automatically call by each other methods of the class `ThingsboardApi`. So, except for debugging purpose, it’s not useful to call directly.

**Value**

`NULL`

---

**ThingsboardApi_getKeys**

*Fetch data keys for an entity*

**Description**

Fetch data keys for an entity

**Arguments**

- `entityId` character entity ID
- `entityType` character (default "DEVICE")

**Details**

The description of this operation in API documentation is here: [https://thingsboard.io/docs/user-guide/telemetry/#get-telemetry-keys](https://thingsboard.io/docs/user-guide/telemetry/#get-telemetry-keys)

**Value**

A vector of character with the keys available for the requested device.
**ThingsboardApi_getTelemetry**

*Fetch telemetry*

**Description**

Fetch telemetry data of an entity.

It uses the following API: [https://thingsboard.io/docs/user-guide/telemetry/#get-telemetry-values](https://thingsboard.io/docs/user-guide/telemetry/#get-telemetry-values)

The method `getValues` has a strong limitation as the 'ThingsBoard' API only send the 100 last values of each key. The method `getTelemetry` overcomes this limitation by automatically by calling `getValues` in a loop.

**Arguments**

- **entityId**
  A character with the entity ID given (See [https://thingsboard.io/docs/user-guide/entity-views/](https://thingsboard.io/docs/user-guide/entity-views/))

- **keys**
  Vector of character with the list of keys from which getting the telemetry values

- **entityType**
  A character (default "DEVICE")

- **startTs**
  A numeric or a POSIXct representing respectively the epoch or the date of the start of data extraction period

- **endTs**
  A numeric or a POSIXct representing respectively the epoch or the date of the end of data extraction period

**Value**

A data.frame with one row per data and 3 columns:

- **key**: a character with the key
- **ts**: a POSIXct with the timestamp of the data
- **value**: a numeric with the value of the data

**ThingsboardApi_getToken**

*Get authorisation token from thingsboard server for a specific device*

**Description**

This method is automatically called by `ThingsboardApi_checkToken`, and so by any other methods of the class `ThingsboardApi` as needed. Except for debugging purpose, it’s not useful to call directly.

**Arguments**

- **timeOut**
  numeric number of second before token timeout (default field tokenTimeOut)
Value

A list with keys 'token' and 'refresh_token'

Description

See ThingsboardApi_getTelemetry.
