Package ‘VertexSimilarity’

October 12, 2022

Version 0.1
Title Creates Vertex Similarity Matrix for an Undirected Graph
Imports igraph
License GPL-2
LazyData true
Author Rishabh Singh
Maintainer Rishabh Singh <rishabhsinghrsg@gmail.com>
NeedsCompilation no
Repository CRAN
Date/Publication 2016-01-24 21:37:10

R topics documented:

VertexSimilarity . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 1

Index

VertexSimilarity  Vertex Similarity

Description

Usage

VertexSimilarity(m, alpha=0.97)
VertexSimilarity

Arguments

m  Adjacency matrix of the graph
alpha  It tells the contribution of long paths relative to short ones. For, 0 < alpha < 1, similarity measure considers vertices to be more similar if they have a greater than expected number of short paths between them, than if they have a greater than expected number of long ones.

Details

This method is based on the idea that a pair of vertices i,j are similar to each other if any pair u,v of their neighbours is similar. Using this method we can even find similarity values for the vertices that are not directly connected.

Examples

m <- matrix(c(1,0,0,0,0,1,1,1,1),ncol=3,nrow=3,byrow=TRUE)
SimilarityMatrix <- VertexSimilarity(m,alpha=0.85)
