Package ‘analogsea’

October 12, 2022

**Title** Interface to ‘Digital Ocean’

**Description** Provides a set of functions for interacting with the ‘Digital Ocean’ API [https://www.digitalocean.com/](https://www.digitalocean.com/), including creating images, destroying them, rebooting, getting details on regions, and available images.

**Version** 1.0.6

**License** Apache License (>= 2)

**URL** [https://github.com/pachadotdev/analogsea](https://github.com/pachadotdev/analogsea) (devel)
 [https://pacha.dev/analogsea/](https://pacha.dev/analogsea/) (docs)

**BugReports** [https://github.com/pachadotdev/analogsea/issues](https://github.com/pachadotdev/analogsea/issues)

**Encoding** UTF-8

**Language** en-US

**Imports** stats, utils, httr (>= 1.2.0), jsonlite (>= 1.1), magrittr, yaml

**Suggests** testthat, knitr, ssh (>= 0.6), aws.s3, arrow

**RoxygenNote** 7.1.2

**NeedsCompilation** no

**Author** Scott Chamberlain [aut] (<https://orcid.org/0000-0003-1444-9135>), Hadley Wickham [aut], Winston Chang [aut], Bob Rudis [ctb], Bryce Mecum [ctb] (<https://orcid.org/0000-0002-0381-3766>), Mauricio Vargas [aut, cre] (<https://orcid.org/0000-0003-1017-7574>), RStudio [cph], DigitalOcean [cph]

**Maintainer** Mauricio Vargas <mavargas11@uc.cl>

**Repository** CRAN

<tr>
<td>R client for Digital Ocean</td>
<td></td>
</tr>
</tbody>
</table>

**Description**

This package is an R client for Digital Ocean’s RESTful API, and a set of scripts that allow you to install R, RStudio server, RStudio Shiny server, or OpenCPU server, in addition to common packages used. The goal here is to spin up a cloud R environment without leaving R, and requiring no knowledge other than R. Of course if you are more experienced you can log in on the command line and modify anything you want, but for those that just want a quick cloud R environment, this should be one of the easiest options.
You need to authenticate to use this package. Get your auth token at https://cloud.digitalocean.com/settings/api/tokens
- See do_oauth for more on authentication.

**ssh keys**

**analoguea** allows you to interact with your droplet(s) from R via SSH. To do this you need to
setup SSH keys with Digital Ocean. Make sure you provide Digital Ocean your public key at
https://cloud.digitalocean.com/ssh_keys - GitHub has some good advice on creating a new public
key if you don’t already have one: https://help.github.com/articles/generating-ssh-keys

Note that when using ssh, you’ll likely get warnings like "The authenticity of host can’t be estab-
lished ...". This is normal, don’t be worried about this.

Note that if you want to connect over SSH to a droplet you have to create the droplet with an SSH
key with the ssh_keys parameter. If you don’t you can still interact with the droplet via the Digital
Ocean API, but you can’t access the droplet over SSH.

---

**account**

*Get account information*

**Description**

Get account information

**Usage**

```r
account(...)```

**Arguments**

```r
... Options passed down to GET```

**Examples**

```r
## Not run:
account()
## End(Not run)```
**action**

*Retrieve an existing action by action id*

**Description**

Retrieve an existing action by action id

**Usage**

```r
action(actionid, ...)
```

**Arguments**

- **actionid** (integer) Optional. An action id.
- **...** Additional arguments passed down to low-level API function (do_*)

**Examples**

```r
## Not run:
d <- droplet_create()
droplet_actions(d)[[1]]$id %>% action()
## End(Not run)
```

---

**actions**

*List actions across all droplets.*

**Description**

"Actions are records of events that have occurred on the resources in your account. These can be things like rebooting a Droplet, or transferring an image to a new region."

**Usage**

```r
actions(..., page = 1, per_page = 25)

action_wait(x)
```

**Arguments**

- **...** Additional arguments passed down to low-level API function (do_*)
- **page** Page to return. Default: 1.
- **per_page** Number of results per page. Default: 25.
- **x** Input object
Details

"An action object is created every time one of these actions is initiated. The action object contains information about the current status of the action, start and complete timestamps, and the associated resource type and ID."

"Every action that creates an action object is available through this endpoint. Completed actions are not removed from this list and are always available for querying."

Examples

```r
## Not run:
actions()

## End(Not run)
```

---

### adjectives

**Adjectives to use for seeding random word selection when name not given for a droplet**

---

Description

Adjectives to use for seeding random word selection when name not given for a droplet

Details

A vector of 999 adjectives. From the GitHub repo https://github.com/dariusk/corpora - the data is licensed CC0.

---

### analogsea-defunct

**Defunct functions in analogsea**

---

Description

These functions are gone, no longer available.

Details

- `tag_rename()`: DigitalOcean removed this functionality from their API. See https://developers.digitalocean.com/documentation/changelog/api-v2/deprecating-update-tag/ for details.
Deprecated functions in analogsea

Description

Debian functions, prefer the Ubuntu equivalents.

- debian_add_swap()
- debian_install_r()
- debian_install_rstudio()
- debian_install_shiny()
- debian_install_opencpu()
- debian_apt_get_update()
- debian_apt_get_install()

as.certificate

Get list of certificate and their metadata, or a single certificate

Description

Get list of certificate and their metadata, or a single certificate

Usage

as.certificate(x)

certificates(page = 1, per_page = 25, ...)

certificate(id, ...)

certificate_create(
  name,
  type,
  private_key = NULL,
  leaf_certificate = NULL,
  certificate_chain = NULL,
  dns_names = NULL,
  ...
)
Arguments

- x: Object to coerce to an certificate
- per_page: Number of results per page. Default: 25.
- ...: Additional arguments passed down to low-level API function (do_*)
- id: (numeric) certificate id
- name: (character) a certificate name
- type: (character) a string representing the type of certificate. The value should be "custom" for a user-uploaded certificate or "lets_encrypt" for one automatically generated with Let's Encrypt. If not provided, "custom" will be assumed by default.
- private_key: (character) the contents of a PEM-formatted private-key corresponding to the SSL certificate
- leaf_certificate: (character) the contents of a PEM-formatted public SSL certificate
- certificate_chain: (character) the full PEM-formatted trust chain between the certificate authority’s certificate and your domain’s SSL certificate
- dns_names: (character) a vector of fully qualified domain names (FQDNs) for which the certificate will be issued. The domains must be managed using DigitalOcean’s DNS

Examples

```r
## Not run:
# list certificates
certificates()

# create a certificate (create a fake domain first)
d <- domain_create("tablesandchairsbunnies.stuff", "107.170.220.59")
certificate_create("mycert", "lets_encrypt",
  dns_names = list("tablesandchairsbunnies.stuff"))

## End(Not run)
```

---

**Description**

List, create, update, and delete domain records.
Usage

as.domain_record(x, domain)

## S3 method for class 'list'
as.domain_record(x, domain)

## S3 method for class 'domain_record'
as.domain_record(x, domain)

## S3 method for class 'domain_record'
as.url(x, ...)

domain_records(domain, ...)

domain_record(domain, domain_record_id, ...)

domain_record_create(
    domain,
    type,
    name = NULL,
    data = NULL,
    priority = NULL,
    port = NULL,
    ttl = NULL,
    weight = NULL,
    flags = NULL,
    tag = NULL,
    ...
)

domain_record_update(
    domain_record,
    type = NULL,
    name = NULL,
    data = NULL,
    priority = NULL,
    port = NULL,
    ttl = NULL,
    weight = NULL,
    flags = NULL,
    tag = NULL,
    ...
)

domain_record_delete(domain_record, ...)

Arguments

- **x** Domain record.
- **domain** (domain) Required. Domain Name (e.g. domain.com), specifies the domain for which to create a record.
- **domain_record_id** (numeric/integer) A domain record ID
- **type** (character) Required. The type of record you would like to create. 'A', 'CNAME', 'NS', 'TXT', 'MX' or 'SRV'
- **name** (character) The host name, alias, or service being defined by the record. Required for 'A', 'CNAME', 'TXT' and 'SRV' records
- **data** (character) Variable data depending on record type. Required for 'A', 'AAAA', 'CNAME', 'MX', 'TXT', 'SRV', and 'NS' records
- **priority** (integer) Required for 'SRV' and 'MX' records
- **port** (integer) Required for 'SRV' records
- **ttl** (numeric/integer) Time to live for the record, in seconds. This defines the timeframe that clients can cache queried information before a refresh should be requested. If not set, default is 1800
- **weight** (integer) Required for 'SRV' records
- **flags** (integer) An unsigned integer between 0-255 used for CAA records
- **tag** (character) The parameter tag for CAA records. Valid values are "issue", "wild-issue", or "iodef"

Examples

```r
## Not run:
# list domains, then get domain records
(d <- domains()[[1]])
(rec <- domain_records(d))

# create a domain
dom <- domain_create("tablesandchairsbunnies.info", "107.170.220.59")
## list domain records
domain_records(dom)

# create a domain record
dr <- domain_record_create(dom, "CNAME", name = "helloworld", data = "@")
domain_record(dom, dr$id)

# update a domain record
dru <- domain_record_update(domain_record = dr, name = "blog")

# delete a domain record
domain_record_delete(dr)
```

## End(Not run)
as.firewall

Get list of firewalls and their metadata, or a single firewall

Description
Get list of firewalls and their metadata, or a single firewall

Usage
as.firewall(x)

firewalls(page = 1, per_page = 25, ...)

firewall(id, ...)

firewall_create(
  name,
  inbound_rules,
  outbound_rules,
  droplet_ids = NULL,
  tags = NULL,
  ...
)

firewall_update(
  name,
  inbound_rules,
  outbound_rules,
  droplet_ids = NULL,
  tags = NULL,
  ...
)

Arguments
  x Object to coerce to an firewall.
  per_page Number of results per page. Default: 25.
  ... Additional arguments passed down to low-level API function (do_*)
  id (numeric) firewall id.
  name (character) a firewall name
  inbound_rules (list) inbound rules
  outbound_rules (list) outbound rules
  droplet_ids (numeric/integer) droplet ids
  tags (character) tag strings
as.image

Get list of images and their metadata, or a single image

Description

Get list of images and their metadata, or a single image

Usage

as.image(x)

images(
  private = FALSE,
  type = NULL,
  page = 1,
  per_page = 25,
  public = TRUE,
  ...
)

image(id, ...)

Arguments

x Object to coerce to an image.

private Include public images? If FALSE, returns only the images that you’ve created (with snapshots).

type (character) One of distribution or application. Default: NULL (no type parameter passed)
as.project

*Description*

Get list of projects and their metadata, or a single project

*Usage*

```r
as.project(x)
projects(page = NULL, per_page = NULL, ...)
project(id = "default", ...)
```

*Arguments*

- **x** Object to coerce to a project.
- **page** Page to return. Default: 1.
- **per_page** Number of results per page. Default: 25.
- **id** (character) project id, default: "default"
Examples

## Not run:
projects()
project("f9597f51-6fb0-492c-866d-bc67bff6d409")

## End(Not run)

---

as.snapshot  
Snapshot operations

Description

- **snapshot**: retrieve a snapshot
- **snapshots**: list snapshots, all, droplets, or volumes
- **snapshot_delete**: delete a snapshot

Usage

- `as.snapshot(x)`
- `snapshots(type = NULL, ...)`
- `snapshot(id, ...)`
- `snapshot_delete(snapshot, ...)`

Arguments

- **x**: Object to coerce to an snapshot
- **type**: (character) NULL (all snapshots), or one of droplet (droplet snapshots) or volume (volume snapshots)
- **...**: Additional options passed down to GET, POST, etc.
- **id**: A snapshot id (varies depending on droplet or volume ID)
- **snapshot**: A snapshot, or something that can be coerced to a snapshot by `as.snapshot`.

Examples

## Not run:
# list all snapshots
(res <- snapshots())

# list droplet snapshots
snapshots(type = "droplet")

# list volume snapshots
snapshots(type = "volume")
# get a single snapshot
snapshot(res[[1]]$id)

# delete a snapshot
## a whole snapshot class object
snapshot_delete(res[[2]])
## by id
snapshot_delete(res[[2]]$id)
## by name
snapshot_delete(res[[2]]$name)

# delete many snapshots
lapply(snapshots(), snapshot_delete)

## End(Not run)

---

**as.space**

*Coerce an object to a space*

---

**Description**

Coerce an object to a space

**Usage**

```r
as.space(x)
```

**Arguments**

- `x`: Object to coerce to a space

---

**as.volume**

*Block storage operations*

---

**Description**

- `volume`: get a single volume
- `volumes`: list volumes
- `volume_create`: create a volume
- `volume_snapshot_create`: create a snapshot of a volume
- `volume_snapshots`: list snapshots for a volume
- `volume_delete`: delete a volume
Usage

as.volume(x)

volumes(...)

volume(volume, ...)

volume_create(
    name,
    size,
    description = NULL,
    region = "nyc1",
    snapshot_id = NULL,
    filesystem_type = NULL,
    filesystem_label = NULL,
    tags = NULL,
    ...
)

volume_snapshot_create(volume, name, ...)

volume_snapshots(volume, ...)

volume_delete(volume, ...)

Arguments

x  Object to coerce to an volume
...	Additional options passed down to GET, POST, etc.
volume  A volume, or something that can be coerced to a volume by as.volume.
name  (character) Name of the new volume. required.
size  (integer) The size of the Block Storage volume in GiB
description  (character) An optional free-form text field to describe a Block Storage volume.
region  (character) The region where the Block Storage volume will be created. When setting a region, the value should be the slug identifier for the region. When you query a Block Storage volume, the entire region object will be returned. Should not be specified with a snapshot_id. Default: nyc1
snapshot_id  (integer) The unique identifier for the volume snapshot from which to create the volume. Should not be specified with a region_id.
filesystem_type  (character) The name of the filesystem type to be used on the volume. When provided, the volume will automatically be formatted to the specified filesystem type. Currently, the available options are "ext4" and "xfs". Pre-formatted volumes are automatically mounted when attached to Ubuntu, Debian, Fedora, Fedora Atomic, and CentOS Droplets created on or after April 26, 2018. Attaching pre-formatted volumes to other Droplets is not recommended.
as.volume

filesystem_label
(character) The label to be applied to the filesystem. Labels for ext4 type filesystems may contain 16 characters while labels for xfs type filesystems are limited to 12 characters. May only be used in conjunction with filesystem_type.

tags
(character) tag names to apply to the Volume after it is created. Tag names can either be existing or new tags.

Details

note that if you delete a volume, and it has a snapshot, the snapshot still exists, so beware

Examples

## Not run:
# list volumes
volumes()

# create a volume
vol1 <- volume_create('testing', 5)
vol2 <- volume_create('foobars', 6, tags = c('stuff', 'things'))

# create snapshot of a volume
xx <- volume_snapshot_create(vol2, "howdy")

# list snapshots for a volume
volume_snapshots(xx)

# list volumes again
res <- volumes()

# get a single volume
## a whole volume class object
volume(res$testing)
## by id
volume(res[[1]]$id)
## by name
volume(res[[1]]$name)

# delete a volume
## a whole volume class object
volume_delete(res$testing)
## by id
volume_delete(res[[1]]$id)
## by name
volume_delete(res[[1]]$name)

# delete many volumes
lapply(volumes(), volume_delete)

## End(Not run)
### certificate_delete

*Delete a certificate*

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Delete a certificate</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>certificate_delete(id, ...)</code></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Arguments</th>
</tr>
</thead>
</table>
| `id`  
A certificate id (not the name) to delete  
`...`  
Options passed on to `httr::DELETE` |

### create_password

*Create a password with digits, letters and special characters*

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Create a password with digits, letters and special characters</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>create_password(n = 8)</code></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Arguments</th>
</tr>
</thead>
</table>
| `n`  
Password length (8-15 characters) |

<table>
<thead>
<tr>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>create_password(10)</code></td>
</tr>
</tbody>
</table>
**databases**

Get all the available databases that can be used to create a droplet.

**Description**

- **database** get a single database
- **databases** list databases
- **database_create** create a database
- **database_snapshot_create** create a snapshot of a database
- **database_snapshots** list snapshots for a database
- **database_delete** delete a database

**Usage**

```r
databases(...)  
as.database(x)  
databases(...)  
database(database, ...)  
database_create(  
    name,  
    size,  
    description = NULL,  
    region = "nyc1",  
    snapshot_id = NULL,  
    engine = NULL,  
    tags = NULL,  
    ...  
)  
database_snapshot_create(database, name, ...)  
database_snapshots(database, ...)  
database_delete(database, ...)  
```

**Arguments**

- `...` Additional options passed down to `GET`, `POST`, etc.
- `x` Object to coerce to an database
- `database` A database, or something that can be coerced to a database by `as.database`
- `name` (character) Name of the new database. required.
size (integer) The size of the Block Storage database in GiB

description (character) An optional free-form text field to describe a Block Storage database.

region (character) The region where the Block Storage database will be created. When setting a region, the value should be the slug identifier for the region. When you query a Block Storage database, the entire region object will be returned. Should not be specified with a snapshot_id. Default: nyc1

snapshot_id (integer) The unique identifier for the database snapshot from which to create the database. Should not be specified with a region_id.

engine (character) The name of the engine type to be used on the database. When provided, the database will be created with the specified backend type. Currently, the available options are "pg", "mysql", "redis" and "mongodb".

tags (character) tag names to apply to the database after it is created. Tag names can either be existing or new tags.

Details

note that if you delete a database, and it has a snapshot, the snapshot still exists, so beware

Value

A data.frame with available databases (RAM, disk, no. CPU’s) and their costs

Examples

```r
## Not run:
databases()
## End(Not run)
## Not run:
# list databases
databases()

# create a database
test <- database_create('testing', 5)
test <- database_create('foobar', 6, tags = c('stuff', 'things'))

# create snapshot of a database
xx <- database_snapshot_create(test, 'howdy')

# list snapshots for a database
database_snapshots(xx)

# list databases again
res <- databases()

# get a single database
## a whole database class object
database(res$testing)
## by id
database(res[[1]]$id)
```
## by name
```
database(res[[1]]$name)
```

# delete a database
## a whole database class object
```
database_delete(res$testing)
```
## by id
```
database_delete(res[[1]]$id)
```
## by name
```
database_delete(res[[1]]$name)
```

# delete many databases
```
lapply(databases(), database_delete)
```

## End(Not run)

---

**debian**  
*Helpers for managing a debian droplets.*

**Description**

Helpers for managing a debian droplets.

**Usage**

### debian_add_swap(
```
droplet,  
    user = "root",  
    keyfile = NULL,  
    ssh_passwd = NULL,  
    verbose = FALSE
)```

### debian_install_r(
```
droplet,  
    user = "root",  
    keyfile = NULL,  
    ssh_passwd = NULL,  
    verbose = FALSE,  
    rprofile = "options(repos=c('CRAN'= 'https://cloud.r-project.org/'))"
)```

### debian_install_rstudio(  
```
droplet,  
    user = "rstudio",  
    password = "server",  
    version = "0.99.484",  
    keyfile = NULL,```
Arguments

droplet A droplet, or object that can be coerced to a droplet by as.droplet.
user Default username for Rstudio.
keyfile Optional private key file.
ssh_passwd Optional passphrase or callback function for authentication. Refer to the ssh::ssh_connect documentation for more details.
verbose If TRUE, will print command before executing it.
rprofile A character string that will be added to the .Rprofile
password Default password for Rstudio.
version Version of rstudio to install.
... Arguments to apt-get install.

Examples

## Not run:
d <- droplet_create()
d %>% debian_add_swap()
d %>% debian_apt_get_update()

d %>% debian_install_r()

d %>% debian_apt_get_install("libcurl4-openssl-dev")
d %>% install_r_package("RCurl")
droplet_delete(d)

## End(Not run)

docklets_create

Docklets: docker on droplets - create many docklets

Description

Docklets: docker on droplets - create many docklets

Usage

docklets_create(
  names = NULL,
  size =getOption("do_size", "s-1vcpu-2gb"),
  region =getOption("do_region", "sfo3"),
  ssh_keys =getOption("do_ssh_keys", NULL),
  backups =getOption("do_backups", NULL),
  ipv6 =getOption("do_ipv6", NULL),
  private_networking =getOption("do_private_networking", NULL),
  tags = list(),
  wait = TRUE,
  image = "docker-18-04",
  ...  
)

Arguments

names (character) Names of the droplets. The human-readable string you wish to use when displaying the Droplet name. The name, if set to a domain name managed in the DigitalOcean DNS management system, will configure a PTR record for the Droplet. The name set during creation will also determine the hostname for the Droplet in its internal configuration. Default: picks a random name from words if none supplied.

size (character) Size slug identifier. See sizes() for a complete list. Default: s-1vcpu-1gb, the smallest
docklets_create

region (character) The unique slug identifier for the region that you wish to deploy in. See `regions()` for a complete list. Default: sfo3

ssh_keys (character) A character vector of key names, an integer vector of key ids, or NULL, to use all keys in your account. Accounts with the corresponding private key will be able to log in to the droplet. See `keys()` for a list of the keys that you’ve added. Default: NULL

backups (logical) Enable backups. A boolean indicating whether automated backups should be enabled for the droplet. Automated backups can only be enabled when the droplet is created, and cost extra. Default: FALSE

ipv6 (logical) A boolean indicating whether IPv6 is enabled on the droplet.

private_networking (logical) Use private networking. Private networking is currently only available in certain regions. Default: FALSE

tags (character) A vector of tag names to apply to the Droplet after it is created. Tag names can either be existing or new tags. Default: list()

wait If TRUE (default), wait until droplet has been initialised and is ready for use. If set to FALSE we return a droplet object right away after droplet creation request has been sent. Note that there won’t be an IP address in the object yet. Note that waiting means we ping the DigitalOcean API to check on the status of your droplet, which uses up your API requests. The option `do.wait_time` can be set to any positive integer to determine how many seconds between pings. The default is 1 sec. Note that if you are creating droplets in a loop, parallel or otherwise, set `do.wait_time` within the loop instead of outside of it.

image (character/numeric) The image ID of a public or private image, or the unique slug identifier for a public image. This image will be the base image for your droplet. See `images()` for a complete list. Use `rstudio-20-04` for a DigitalOcean Marketplace image with R and Tidyverse readily available. Default: ubuntu-18-04-x64

... Additional options passed down to `POST`

Value

Two or more droplet objects

Missing droplet ID

If you get a droplet object back without an IP address, the IP address was not assigned when the payload was returned by DigitalOcean. Simply run `d <- droplet(d$id)` to update your droplet object and the IP address will populate.

Examples

```r
## Not run:
# if no names given, creates two droplets with random names
docklets_create()

# give names
```
docklet_create

docklets_create(names = c('drop1', 'drop2'))
docklets_create(names = c('drop3', 'drop4'))

## End(Not run)

docklet_create  Docklets: docker on droplets.

Description

Docklets: docker on droplets.

Usage

docklet_create(
  name = random_name(),
  size = getOption("do_size", "s-1vcpu-2gb"),
  region = getOption("do_region", "sfo3"),
  ssh_keys = getOption("do_ssh_keys", NULL),
  backups = getOption("do_backups", NULL),
  ipv6 = getOption("do_ipv6", NULL),
  private_networking = getOption("do_private_networking", NULL),
  tags = list(),
  wait = TRUE,
  image = "docker-20-04",
  keyfile = NULL,
  ...
)

docklet_ps(droplet, all = TRUE, ssh_user = "root")

docklet_images(droplet, all = TRUE, ssh_user = "root")

docklet_pull(
  droplet,
  repo,
  ssh_user = "root",
  keyfile = NULL,
  ssh_passwd = NULL,
  verbose = FALSE
)

docklet_run(
  droplet,
  ..., 
  rm = FALSE,
  name = NULL,
  ...,
docklet_create

    ssh_user = "root",
    keyfile = NULL,
    ssh_passwd = NULL,
    verbose = FALSE
)

docklet_stop(droplet, container, ssh_user = "root")

docklet_rm(droplet, container, ssh_user = "root")

docklet_docker(
    droplet,
    cmd,
    args = NULL,
    docker_args = NULL,
    ssh_user = "root",
    keyfile = NULL,
    ssh_passwd = NULL,
    verbose = FALSE
)

docklet_rstudio(
    droplet,
    user,
    password,
    email = "rstudio@example.com",
    img = "rocker/rstudio",
    port = "8787",
    volume = "",
    dir = "",
    browse = TRUE,
    add_users = FALSE,
    ssh_user = "root",
    keyfile = NULL,
    ssh_passwd = NULL,
    verbose = FALSE
)

docklet_rstudio_addusers(
    droplet,
    user,
    password,
    img = "rocker/rstudio",
    port = "8787",
    ssh_user = "root",
    keyfile = NULL,
    ssh_passwd = NULL,
    verbose = FALSE
docklet_create

)

docklet_shinyserver(
  droplet,
  img = "rocker/shiny",
  port = "3838",
  volume = "",
  dir = "",
  browse = TRUE,
  ssh_user = "root",
  keyfile = NULL
)

docklet_shinyapp(
  droplet,
  path,
  img = "rocker/shiny",
  port = "80",
  dir = "",
  browse = TRUE,
  ssh_user = "root",
  keyfile = NULL
)

Arguments

name (character) Name of the droplet. The human-readable string you wish to use when displaying the Droplet name. The name, if set to a domain name managed in the DigitalOcean DNS management system, will configure a PTR record for the Droplet. The name set during creation will also determine the hostname for the Droplet in its internal configuration. Default: picks a random name from words if none supplied.

size (character) Size slug identifier. See sizes() for a complete list. Default: s-1vcpu-2gb

region (character) The unique slug identifier for the region that you wish to deploy in. See regions() for a complete list. Default: sfo3

ssh_keys (character) A character vector of key names, an integer vector of key ids, or NULL, to use all keys in your account. Accounts with the corresponding private key will be able to log in to the droplet. See keys() for a list of the keys that you’ve added. Default: NULL

backups (logical) Enable backups. A boolean indicating whether automated backups should be enabled for the droplet. Automated backups can only be enabled when the droplet is created, and cost extra. Default: FALSE

ipv6 (logical) A boolean indicating whether IPv6 is enabled on the droplet.

private_networking (logical) Use private networking. Private networking is currently only available in certain regions. Default: FALSE
tags (character) A vector of tag names to apply to the Droplet after it is created. Tag names can either be existing or new tags. Default: list()

wait If TRUE (default), wait until droplet has been initialised and is ready for use. If set to FALSE we return a droplet object right away after droplet creation request has been sent. Note that there won’t be an IP address in the object yet. Note that waiting means we ping the DigitalOcean API to check on the status of your droplet, which uses up your API requests. The option do.wait_time can be set to any positive integer to determine how many seconds between pings. The default is 1 sec. Note that if you are creating droplets in a loop, parallel or otherwise, set do.wait_time within the loop instead of outside of it.

image (character/numeric) The image ID of a public or private image, or the unique slug identifier for a public image. This image will be the base image for your droplet. See images() for a complete list. Use rstudio-20-04 for a DigitalOcean Marketplace image with R and Tidyverse readily available. Default: ubuntu-18-04-x64

keyfile Optional private key file.

... For docklet_create, additional options passed down to POST. For docklet_run, additional arguments combined and applied to docker statement.

droplet A droplet, or something that can be coerced to a droplet by as.droplet.

all (logical) List all containers or images. Default: TRUE

ssh_user (character) User account for ssh commands against droplet. Default: root

repo (character) Docker name, can be local to the Droplet or remote, e.g., rocker/rstudio

ssh_passwd Optional passphrase or callback function for authentication. Refer to the ssh::ssh_connect documentation for more details.

verbose If TRUE, will print command before executing it.

rm (logical) Automatically remove the container when it exits. Default: FALSE

container (character) Container name, can be partial (though has to be unique)

cmd (character) A docker command (e.g., "run")

args (character) Docker args

docker_args (character) Docker args

user (character) User name. required.

password (character) Password. required. can not be 'rstudio'

email (character) E-mail address. Default: "rstudio@example.com"

img (character) Docker image (not a DigitalOcean image). Default: ' rocker/rstudio'

port (character) Port. Default: 8787

volume (character) Volume. Can use to bind a volume.

dir (character) Working directory inside the container.

browse (logical) If TRUE, open RStudio instance in your default browser.

add_users (logical) Add users or not when installing RStudio server. Default: FALSE

path (character) Path to a directory with Shiny app files
Value

all functions return a droplet

URLs

If you need to figure out the URL for your RStudio or Shiny server instance, you can construct like http://<ip address>:<port> where IP address can most likely be found like `$networks$v4[[1]]$ip_address` and the port is the port you set in the function call.

Managing Docker containers from R

There’s a few things to be note about managing Docker containers from analogsea:

- To see running containers run `docklet_ps(d)`
- To get get logs run `droplet_ssh(d, "docker logs <container ID>")`
- To get a continuous feed of the logs run `droplet_ssh(d, "docker logs -f <container ID>")`
- Do not use `docker exec -ti` as you do not want an interactive session - it will not work from within R. If you log into your DigitalOcean droplet you can do `docker exec -ti`
- To install R package dependencies for a Shiny app, or similar, run `droplet_ssh(d, "docker exec <ID> R -e "install.packages("pkg-name")"")`

Where `d` is your droplet object and `<ID>` is the docker container ID

Missing droplet ID

If you get a droplet object back without an IP address, the IP address was not assigned when the payload was returned by DigitalOcean. Simply run `d <- droplet(d$id)` to update your droplet object and the IP address will populate.

See Also

docklets_create

Examples

```r
## Not run:
d <- docklet_create()
d <- droplet(d$id)
d %>% docklet_pull("dockerpinata/sqlite")
d %>% docklet_images()

# sqlite
d %>% docklet_run("dockerpinata/sqlite", "sqlite3 --version", rm = TRUE)
d %>% docklet_ps()

# cowsay
d %>% docklet_run("chuanwen/cowsay")
d %>% docklet_run("chuanwen/cowsay", rm = TRUE)

# docker images
d %>% docklet_images()
```
domains

Get information on a single domain or all your domains.

Description

Get information on a single domain or all your domains.

Usage

domains(...)

as.domain(x)

domain(x, ...)
domain_create

Arguments

... Further args passed on the curl call to the web.
x (character) Required. Domain name

Examples

## Not run:
domains()

## End(Not run)

---

domain_create Create/delete domains.

Description

Create/delete domains.

Usage

domain_create(name, ip_address, ...)
domain_delete(domain, ...)

Arguments

name (character) Required. The domain name to add to the DigitalOcean DNS management interface. The name must be unique in DigitalOcean’s DNS system. The request will fail if the name has already been taken.
ip_address (character) Required. An IP address for the domain’s initial A record.
... Further args passed on the curl call to the web.
domain A domain to modify

Examples

## Not run:
d <- domain_create('tablesandchairsbunnies.info', '107.170.220.59')
domain_delete(d)

## End(Not run)
do_oauth

Authorize with Digital Ocean.

Description

This function is run automatically to allow analogsea to access your digital ocean account.

Usage

do_oauth(app = do_app, reauth = FALSE)

Arguments

app An oauth_app for DO. The default uses the standard ROpenSci application.
reauth (logical) Force re-authorization?

Details

There are two ways to authorise analogsea to work with your digital ocean account:

- Generate a personal access token at https://cloud.digitalocean.com/settings/api/tokens and record in the DO_PAT envvar.
- Interatively login into your DO account and authorise with OAuth.

Using DO_PAT is recommended.

do_options

Set Digital Ocean options including ssh keys, etc.

Description

This function sets options and prints them so you know what options are set.

Usage

do_options(
  size = NULL,
  image = NULL,
  region = NULL,
  ssh_keys = NULL,
  private_networking = NULL,
  backups = NULL,
  ipv6 = NULL,
  unset = FALSE
)

}
do_options

Arguments

size (optional) A Digital Ocean size slug name, e.g. '1gb'. Saved in options as 'do_size'
image (optional) A Digital Ocean image name, e.g., 'ubuntu-14-04-x64'. Saved in options as 'do_image'
region (optional) A Digital Ocean region name, e.g., 'nyc1'. Saved in options as 'do_region'
ssh_keys (optional) One or more ssh key id numbers or fingerprints. Put many in a list or vector. Saved in options as 'do_ssh_keys'
private_networking (optional) A logical, whether to use private networking or not. Saved in options as 'do_private_networking'
backups (optional) A logical, whether to enable backups. Automated backups can only be enabled when the Droplet is created. Saved in options as 'do_backups'
ipv6 (optional) A boolean indicating whether IPv6 is enabled on the Droplet. Saved in options as 'do_ipv6'
unset (optional) A boolean. If TRUE, unsets options so as to use defaults in droplet_create. If FALSE (default) your options are used in droplet_create.

Details

These options are read and used by droplet_create.

You can only set one value for each of size, image, and region, but multiple values for ssh_keys as you can use multiple ssh keys on one DO droplet.

Keep in mind that there are defaults set for size, image, and region in droplet_create.

Examples

## Not run:
do_options()
do_options(ssh_keys=89103)
getOption('do_ssh_keys')
do_options(size="8gb")
do_options(size="1gb", image='ubuntu-14-04-x64', region='nyc1')
getOption('do_size')
getOption('do_image')
getOption('do_region')

## End(Not run)
**droplet**

*Retrieve a single droplet.*

**Description**

Retrieve a single droplet.

**Usage**

droplet(id, ...)

as.droplet(x)

```r
## S3 method for class 'droplet'
summary(object, ...)
```

**Arguments**

- `id` (integer) Droplet id.
- `...` Additional arguments passed down to low-level API function (do_*)
- `x` Object to coerce. Can be an integer (droplet id), string (droplet name), a droplet (duh), or an action (which waits until complete then returns the droplet)
- `object` Droplet object to pass to summary

**Examples**

```r
## Not run:
droplet(1234)

as.droplet("my-favourite-droplet")
as.droplet(10)
as.droplet(droplets()[[1]])

droplet(1234) %>% summary

## End(Not run)
```

**droplets**

*List all available droplets.*

**Description**

List all available droplets.
Usage

```
droplets(..., page = 1, per_page = 25, tag = NULL)
```

Arguments

- \(\ldots\) Additional arguments passed down to low-level API function (do_*)
- `per_page` Number of results per page. Default: 25.
- `tag` (character) Name of a tag. optional

Examples

```r
## Not run:
droplets()
droplets(per_page = 2)
droplets(per_page = 2, page = 2)

# list droplets by tag
tag_create(name = "stuffthings")
d <- droplet_create()
tag_resource(name = "stuffthings", resource_id = d$id,
  resource_type = "droplet")
droplets(tag = "stuffthings")

## End(Not run)
```

droplets_cost  

**Calculate cost across droplets**

Description

Calculate cost across droplets

Usage

```
droplets_cost(x)
```

Arguments

- `x` Object to coerce. Can be an integer (droplet id), string (droplet name), a droplet (duh)
droplets_create

Create many new droplets.

Description

There are defaults for each of size, image, and region so that a quick one-liner with one parameter is possible: simply specify the name of the droplet and you’re up and running.

Usage

droplets_create(
  names = NULL,
  size =getOption("do_size", "s-1vcpu-1gb"),
  image =getOption("do_image", "ubuntu-18-04-x64"),
  region =getOption("do_region", "sfo3"),
  ssh_keys =getOption("do_ssh_keys", NULL),
  backups =getOption("do_backups", NULL),
  ipv6 =getOption("do_ipv6", NULL),
  private_networking =getOption("do_private_networking", NULL),
  tags =list(),
  user_data = NULL,
  cloud_config = NULL,
  wait = TRUE,
  ...
)

Arguments

names (character) Names of the droplets. The human-readable string you wish to use when displaying the Droplet name. The name, if set to a domain name managed in the DigitalOcean DNS management system, will configure a PTR record for the Droplet. The name set during creation will also determine the hostname for the Droplet in its internal configuration. Default: picks a random name from words if none supplied.

size (character) Size slug identifier. See sizes() for a complete list. Default: s-1vcpu-1gb, the smallest
image (character/numeric) The image ID of a public or private image, or the unique slug identifier for a public image. This image will be the base image for your droplet. See `images()` for a complete list. Use `rstudio-20-04` for a DigitalOcean Marketplace image with R and Tidyverse readily available. Default: `ubuntu-18-04-x64`

region (character) The unique slug identifier for the region that you wish to deploy in. See `regions()` for a complete list. Default: `sfo3`

ssh_keys (character) A character vector of key names, an integer vector of key ids, or NULL, to use all keys in your account. Accounts with the corresponding private key will be able to log in to the droplet. See `keys()` for a list of the keys that you’ve added. Default: NULL

backups (logical) Enable backups. A boolean indicating whether automated backups should be enabled for the droplet. Automated backups can only be enabled when the droplet is created, and cost extra. Default: FALSE

ipv6 (logical) A boolean indicating whether IPv6 is enabled on the droplet.

private_networking (logical) Use private networking. Private networking is currently only available in certain regions. Default: FALSE

tags (character) A vector of tag names to apply to the Droplet after it is created. Tag names can either be existing or new tags. Default: list()

user_data (character) Gets passed to the droplet at boot time. Not all regions have this enabled, and is not used by all images.

cloud_config (character) Specify the name of a cloud config template to automatically generate and submit in user metadata. Setting this is best practice: the built-in templates use security best practices (disabling root log-in, security autoupdates) to make it harder to hack your droplet.

wait If TRUE (default), wait until droplet has been initialised and is ready for use. If set to FALSE we return a droplet object right away after droplet creation request has been sent. Note that there won’t be an IP address in the object yet. Note that waiting means we ping the DigitalOcean API to check on the status of your droplet, which uses up your API requests. The option `do.wait_time` can be set to any positive integer to determine how many seconds between pings. The default is 1 sec. Note that if you are creating droplets in a loop, parallel or otherwise, set `do.wait_time` within the loop instead of outside of it.

... Additional options passed down to `POST`

Details

Note that if you exit the R session or kill the function call after it’s in waiting process (the string of ...), the droplet creation will continue.

Value

Two or more droplet objects
Missing droplet ID

If you get a droplet object back without an IP address, the IP address was not assigned when the payload was returned by DigitalOcean. Simply run `d <- droplet(d$id)` to update your droplet object and the IP address will populate.

Examples

```r
## Not run:
# if no names given, creates two droplets with random names
droplets_create()

# give names
droplets_create(names = c('drop1', 'drop2'))
droplets_create(names = c('drop3', 'drop4'))

# add tags
(d <- droplets_create(tags = 'mystuff'))
invisible(lapply(d, summary))

## End(Not run)
```

droplet_action  Perform various actions on a droplet.

Description

These droplet actions have no further arguments.

Usage

```r
droplet_reboot(droplet, ...)
droplet_power_cycle(droplet, ...)
droplet_shutdown(droplet, ...)
droplet_power_off(droplet, ...)
droplet_power_on(droplet, ...)
droplet_reset_password(droplet, ...)
droplet_enable_ipv6(droplet, ...)
droplet_enable_private_networking(droplet, ...)
droplet_enable_backups(droplet, ...)
```
droplet_disable_backups(droplet, ...)

droplet_upgrade(droplet, ...)

Arguments

droplet  A droplet, or something that can be coerced to a droplet by as.droplet.
...

Additional options passed down to low-level API method.

Details

reboot  This method allows you to reboot a droplet. This is the preferred method to use if a server is not responding

powercycle  This method allows you to power cycle a droplet. This will turn off the droplet and then turn it back on.

shutdown  Shutdown a running droplet. The droplet will remain in your account and you will continue to be charged for it.

power_off  Shutdown a running droplet. The droplet will remain in your account and you will continue to be charged for it.

reset_password  This method will reset the root password for a droplet. Please be aware that this will reboot the droplet to allow resetting the password.

enable_ipv6  Enable IPv6 networking on an existing droplet (within a region that has IPv6 available).

enable_private_networking  Enable private networking on an existing droplet (within a region that has private networking available)

disable_backups  Disables backups for a droplet.

enable_backups  Enables backups for a droplet.

power_on  Turn on a droplet that’s turned off.

Examples

```r
## Not run:
d <- droplets()
d[[1]] %>% droplet_reboot()
d[[2]] %>% droplet_power_cycle()

d <- droplet_create()
d %>% summary
d %>% droplet_enable_backups()
d %>% summary

## End(Not run)
```
**droplet_actions**  
**Retrieve a droplet action or list all actions associated with a droplet.**

**Description**
Retrieve a droplet action or list all actions associated with a droplet.

**Usage**
```r
droplet_actions(droplet, actionid = NULL, ...)
```

**Arguments**
- `droplet`: A droplet, or something that can be coerced to a droplet by `as.droplet`.
- `actionid`: (integer) Optional. An action id.
- `...`: Additional options passed down to low-level API method.

**Examples**
```r
## Not run:
droplet_actions(2428384)
droplet_actions(2428384, actionid=31223385)
## End(Not run)
```

---

**droplet_create**  
**Create a new droplet.**

**Description**
There are defaults for each of size, image, and region so that a quick one-liner with one parameter is possible: simply specify the name of the droplet and you’re up and running.

**Usage**
```r
droplet_create(
  name = random_name(),
  size =getOption("do_size", "s-1vcpu-1gb"),
  image =getOption("do_image", "ubuntu-18-04-x64"),
  region =getOption("do_region", "sfo3"),
  ssh_keys =getOption("do_ssh_keys", NULL),
  backups =getOption("do_backups", NULL),
  ipv6 =getOption("do_ipv6", NULL),
  private_networking =getOption("do_private_networking", NULL),
  tags = list(),
)```
user_data = NULL,
cloud_config = NULL,
wait = TRUE,
...
)

Arguments

name (character) Name of the droplet. The human-readable string you wish to use when displaying the Droplet name. The name, if set to a domain name managed in the DigitalOcean DNS management system, will configure a PTR record for the Droplet. The name set during creation will also determine the hostname for the Droplet in its internal configuration. Default: picks a random name from words if none supplied.

size (character) Size slug identifier. See sizes() for a complete list. Default: s-1vcpu-1gb, the smallest

image (character/numeric) The image ID of a public or private image, or the unique slug identifier for a public image. This image will be the base image for your droplet. See images() for a complete list. Use rstudio-20-04 for a DigitalOcean Marketplace image with R and Tidyverse readily available. Default: ubuntu-18-04-x64

region (character) The unique slug identifier for the region that you wish to deploy in. See regions() for a complete list. Default: sfo3

ssh_keys (character) A character vector of key names, an integer vector of key ids, or NULL, to use all keys in your account. Accounts with the corresponding private key will be able to log in to the droplet. See keys() for a list of the keys that you’ve added. Default: NULL

backups (logical) Enable backups. A boolean indicating whether automated backups should be enabled for the droplet. Automated backups can only be enabled when the droplet is created, and cost extra. Default: FALSE

ipv6 (logical) A boolean indicating whether IPv6 is enabled on the droplet.

private_networking (logical) Use private networking. Private networking is currently only available in certain regions. Default: FALSE

tags (character) A vector of tag names to apply to the Droplet after it is created. Tag names can either be existing or new tags. Default: list()

user_data (character) Gets passed to the droplet at boot time. Not all regions have this enabled, and is not used by all images.

cloud_config (character) Specify the name of a cloud config template to automatically generate cloud_config and submit in user metadata. Setting this is best practice: the built-in templates use security best practices (disabling root log-in, security autoupdates) to make it harder to hack your droplet.

wait If TRUE (default), wait until droplet has been initialised and is ready for use. If set to FALSE we return a droplet object right away after droplet creation request has been sent. Note that there won’t be an IP address in the object yet. Note
that waiting means we ping the DigitalOcean API to check on the status of your droplet, which uses up your API requests. The option do.wait_time can be set to any positive integer to determine how many seconds between pings. The default is 1 sec. Note that if you are creating droplets in a loop, parallel or otherwise, set do.wait_time within the loop instead of outside of it.

Additional options passed down to POST

Details

Note that if you exit the R session or kill the function call after it’s in waiting process (the string of ...), the droplet creation will continue.

Value

A droplet object

Missing droplet ID

If you get a droplet object back without an IP address, the IP address was not assigned when the payload was returned by DigitalOcean. Simply run d <- droplet(d$id) to update your droplet object and the IP address will populate.

Examples

```r
## Not run:
# by default we give your droplet a name
droplet_create()

# you can set your own droplet name
droplet_create('droppinit')

# set name, size, image, and region
droplet_create(name="newdrop", size = '512mb', image = 'ubuntu-14-04-x64', region = 'sfo3')

# use an ssh key
droplet_create(ssh_keys=89103)

# add tags
d <- droplet_create(tags = c('venus', 'mars'))
summary(d)

## End(Not run)
```
droplet_delete  

Delete a droplet.

Description
This method deletes one of your droplets - this is irreversible.

Usage

droplet_delete(droplet = NULL, tag = NULL, ...)

Arguments

droplet  A droplet, or something that can be coerced to a droplet by as.droplet.
tag  (character) Name of a tag. optional
...

Additional options passed down to low-level API method.

Examples

## Not run:
drops <- droplets()
drops[[1]] %>% droplet_delete()
drops[[2]] %>% droplet_delete()
droplet_create() %>% droplet_delete()
droplet_delete("lombard")
droplet_delete(12345)

# Delete all droplets
lapply(droplets(), droplet_delete)

# delete droplets by tag
## first, create a tag, then a droplet, then tag it
tag_create(name = "foobar")
e <- droplet_create()
tag_resource(name = "foobar", resource_id = e$id)
droplets(tag = "foobar")
## then delete the droplet by tag name
droplet_delete(tag = "foobar")

## End(Not run)
droplet_do_actions  

Perform actions on one or more droplets associated with a tag

Description

Perform actions on one or more droplets associated with a tag

Usage

droplet_do_actions(name, type, ...)

Arguments

name  (character) Name of the tag. Required.
type  (character) action type, one of 'power_cycle', 'power_on', 'power_off', 'shutdown', 'enable_private_networking', 'enable_ipv6', 'enable_backups', 'disable_backups', or 'snapshot'. Required.
...  Additional options passed down to POST

Examples

## Not run:
tag_create(name = "pluto")
d <- droplet_create()
tag_resource(name = "pluto", resource_id = d$id)
(x <- droplet_do_actions(name = "pluto", type = "power_off"))
# wait until completed, check with action(xx$actions[[1]]$id)
droplet_do_actions(name = "pluto", type = "power_on")

## End(Not run)

---

droplet_execute  

Execute R code on a droplet.

Description

Execute R code on a droplet.

Usage

droplet_execute(droplet, code, verbose = TRUE)

Arguments

droplet  A droplet, or object that can be coerced to a droplet by `as.droplet`.
code  Code to execute on a droplet.
verbose  (logical) Print messages. Default: TRUE
**Details**

Assumes that the droplet has R installed.

**Examples**

```r
## Not run:
d <- droplet_create() %>%
    ubuntu_add_swap() %>%
    droplet_ssh("apt-get update") %>%
    ubuntu_install_r()

results <- d %>% droplet_execute({
  x <- letters
  numbers <- runif(1000)
})
results$x
results$numbers

droplet_delete(d)

## End(Not run)
```

---

**Description**

Freeze powers off the droplet, snapshots to create an image, and deletes the droplet. Thaw performs the inverse: it takes an image and turns it into a running droplet.

**Usage**

droplet_freeze(droplet, name = droplet$name, ...)

droplet_thaw(image, ...)

**Arguments**

- **droplet**: A droplet, or something that can be coerced to a droplet by `as.droplet`.
- **name**: Name for the image to be created, or to be used to create a new droplet. Defaults to name of the droplet.
- **...**: For freeze, further args passed on to `droplet_snapshot`; thaw, args passed on to `droplet_create`.
- **image**: Image to thaw into a droplet.

**Value**

droplet_freeze accepts a droplet as first argument, and returns an image; droplet_thaw does the opposite: it accepts an image as first argument, and returns a droplet.
Examples

```r
## Not run:
# freeze
droplet_create(region = 'nyc3') %>% droplet_freeze()

# thaw
droplet_thaw(image='chiromantical-1412718795', region='nyc3')
## End(Not run)
```

---

droplet_functions  Functions for DigitalOcean (DO) droplets

Description

There’s a lot of functions for working with droplets. Here’s a breakdown of what they all do.

Documentation

- DigitalOcean docs overview: https://developers.digitalocean.com/documentation/
- DigitalOcean API docs: https://developers.digitalocean.com/documentation/v2/

Functions

The main functions for creating/deleting droplets:

- `droplet()`: get a droplet object from a droplet ID
- `droplet_create()`: create a droplet
- `droplets_create()`: create two or more droplets
- `droplet_delete()`: delete a droplet
- `droplets()`: get your droplets
- `as.droplet()`: coerce various things to droplet objects

Modify a droplet:

- `droplet_resize()`: resize a droplet to a different size
- `droplet_rebuild()`: reinstall a droplet with a different image
- `droplet_rename()`: rename a droplet
- `droplet_change_kernel()`: change droplet to a new kernel

Take and restore snapshots:

- `droplet_snapshot()`: make a snapshot of a droplet
- `droplet_snapshots_list()`: list snapshots on a droplet
- `droplet_backups_list()`: list droplet backups
• `droplet_restore()`: Restore a droplet with a previous image or snapshot

SSH interactions with droplets:

• `droplet_ssh()`: Remotely execute code on your droplet via ssh
• `droplet_upload()`: Upload files to your droplet via ssh
• `droplet_download()`: Download files from your droplet via ssh

Perform various actions on droplets:

• `droplet_actions()`: retrieve a droplet action or list all actions associated with a droplet
• `droplet_disable_backups()`: Disables backups for a droplet
• `droplet_do_actions()`: Perform actions on one or more droplets associated with a tag
• `droplet_enable_backups()`: Enables backups for a droplet
• `droplet_enable_ipv6()`: Enable IPv6 networking on an existing droplet (within a region that has IPv6 available)
• `droplet_enable_private_networking()`: Enable private networking on an existing droplet (within a region that has private networking available)
• `droplet_execute()`: Execute R code on a droplet
• `droplet_kernels_list()`: List all available kernels for a droplet
• `droplet_neighbors()`: List a droplet’s neighbors on the same physical server
• `droplet_power_cycle()`: power cycle a droplet. will turn off the droplet and then turn it back on
• `droplet_power_off()`: Shutdown a running droplet. The droplet will remain in your account and you will continue to be charged for it
• `droplet_power_on()`: Turn on a droplet that’s turned off
• `droplet_reboot()`: reboot a droplet. This is the preferred method to use if a server is not responding
• `droplet_reset_password()`: reset the root password for a droplet
• `droplet_reuse()`: Reuse a droplet or image by name, creating a new droplet
• `droplet_shutdown()`: Shutdown a running droplet. The droplet will remain in your account and you will continue to be charged for it.
• `droplet_upgrade()`: Migrate a droplet - NOT SURE IF THIS STILL WORKS OR NOT
• `droplet_upgrades_list()`: List all droplets that are scheduled to be upgraded
• `droplet_wait()`: Wait for a droplet to be ready. mostly used internally
• `droplets_cost()`: Calculate cost across droplets

Freeze/thaw droplets:

• `droplet_freeze()`: power off a droplet, snapshots to create an image, and deletes the droplet
• `droplet_thaw()`: takes an image and turns it into a running droplet
Working with Docker

We named a DO droplet with the Docker application installed a "docklet" for convenience.

The main two functions for creating docklets:

- `docklet_create()`: create a docklet (a droplet using the docker image)
- `docklets_create()`: create many docklets

Running docker commands on your docklet:

- `docklet_images()`: list docker images on your docklet
- `docklet_ps()`: list running docker containers
- `docklet_pull()`: pull a docker image to your docklet
- `docklet_rm()`: remove a docker image from your docklet
- `docklet_run()`: run a docker command on your docklet
- `docklet_stop()`: stop a running docker container
- `docklet_docker()`: low level fxn for running docker commands on your, not realy intended for public use

Install RStudio things:

- `docklet_rstudio()`: install RStudio on your docklet using Rocker images (https://hub.docker.com/u/rocker)
- `docklet_rstudio_addusers()`: add users to an RStudio docker image
- `docklet_shinyserver()`: install Shiny server on your docklet using Rocker images (https://hub.docker.com/u/rocker)
- `docklet_shinyapp()`: install a Shiny app on your Shiny server docker container

---

**droplet_ip**

*Get droplet’s IP address*

**Description**

Get droplet’s IP address

**Usage**

droplet_ip(droplet)

**Arguments**

droplet A droplet, or something that can be coerced to a droplet by `as.droplet`.

**Examples**

```r
## Not run:
# Obtain the droplet's IP as a string
my_droplet <- droplet_create("demo", region = "sfo3")
droplet_ip(my_droplet)

## End(Not run)
```
droplet_kernels_list  List all available kernels for a droplet.

Description
List all available kernels for a droplet.

Usage
droplet_kernels_list(droplet, ...)

Arguments
droplet  A droplet, or something that can be coerced to a droplet by as.droplet.
...  Additional options passed down to low-level API method.

Examples
## Not run:
droplets()[[1]] %>% droplet_kernels_list
## End(Not run)

droplet_modify  Modify a droplet.

Description
These methods allow you to modify existing droplets.

Usage
droplet_resize(droplet, size, ...)
droplet_rebuild(droplet, image, ...)
droplet_rename(droplet, name, ...)
droplet_change_kernel(droplet, kernel, ...)
Arguments

- **droplet** A droplet, or something that can be coerced to a droplet by `as.droplet`.
- **size** (character) Size slug (name) of the image size. See `sizes`... Additional options passed down to low-level API method.
- **image** (optional) The image ID of the backup image that you would like to restore.
- **name** (character) The new name for the droplet
- **kernel** (numeric) The ID of the new kernel.

Details

- **resize** Resize a specific droplet to a different size. This will affect the number of processors and memory allocated to the droplet.
- **rebuild** Reinstall a droplet with a default image. This is useful if you want to start again but retain the same IP address for your droplet.
- **rename** Change the droplet name
- **change_kernel** Change kernel ID.

Beware: `droplet_resize()` does not seem to work, see `resize()`

Examples

```r
## Not run:
droplets()[[1]] %>% droplet_rename(name='newname')

## End(Not run)
```

---

**droplet_reuse**

*Reuse a droplet or image by name*

Description

Reuse a droplet or image by name

Usage

```r
droplet_reuse(name, ...)
```

Arguments

- **name** A name that could be a droplet or image name
- **...** Named options passed on to `droplet_create`.

Details

Internally, we call the `droplets` and `images` (with `private = TRUE`) to get list of your droplets and images - and we check against those.
**droplet_snapshot**

**Value**

A droplet

**Examples**

```r
## Not run:
# matches droplet that exists
droplet_reuse(name = 'BeguiledAmmonia')

# matching image that exists
droplet_reuse(name = 'hadleyverse1', size = "1gb")

# no matching droplet or image
droplet_reuse(name = 'tablesandchairs')

## End(Not run)
```

---

**droplet_snapshot**  
*Take and restore snapshots.*

**Description**

- **snapshot**  Take a snapshot of the droplet once it has been powered off, which can later be restored or used to create a new droplet from the same image.
- **snapshots_list** List available snapshots
- **backups_list** List available snapshots
- **restore**  Restore a droplet with a previous image or snapshot. This will be a mirror copy of the image or snapshot to your droplet. Be sure you have backed up any necessary information prior to restore.

**Usage**

```r
droplet_snapshot(droplet, name = NULL, wait = TRUE, ...)
droplet_snapshots_list(droplet, ...)
droplet_restore(droplet, image, ...)
droplet_backups_list(droplet, ...)
```

**Arguments**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>droplet</td>
<td>A droplet number or the result from a call to droplets()</td>
</tr>
<tr>
<td>name</td>
<td>(character) Optional. Name of the new snapshot you want to create. If not set, the snapshot name will default to the current date/time</td>
</tr>
</tbody>
</table>
If TRUE (default), wait until the snapshot has been completed and is ready for use. If set to FALSE we return a droplet object right away after droplet snapshot request has been sent.

Additional options passed down to POST

(optional) The image ID of the backup image that you would like to restore.

Examples

```r
## Not run:
d <- droplet_create()
d %>% droplet_snapshots_list()
d %>% droplet_backups_list()

d %>%
  droplet_snapshot() %>%
  droplet_power_on() %>%
  droplet_snapshots_list()

# To delete safely

d %>%
  droplet_snapshot() %>%
  droplet_delete() %>%
  action_wait()

## End(Not run)
```

## droplet_ssh

Remotely execute ssh code, upload & download files.

**Description**

Assumes that you have ssh & scp installed, and password-less login set up on the droplet.

**Usage**

```r
droplet_ssh(
  droplet,
  ...,
  user = "root",
  keyfile = NULL,
  ssh_passwd = NULL,
  verbose = FALSE
)

droplet_upload(
  droplet,
  local,
  remote,
```
droplet_ssh

user = "root",
keyfile = NULL,
ssh_passwd = NULL,
verbose = FALSE
)

droplet_download(
    droplet,
    remote,
    local,
    user = "root",
    keyfile = NULL,
    ssh_passwd = NULL,
    verbose = FALSE,
    overwrite = FALSE
)

Arguments

droplet A droplet, or something that can be coerced to a droplet by as.droplet.
...
user User name. Defaults to "root".
keyfile Optional private key file.
ssh_passwd Optional passphrase or callback function for authentication. Refer to the ssh::ssh_connect documentation for more details.
verbose If TRUE, will print command before executing it.
local, remote Local and remote paths.
overwrite If TRUE, then overwrite destination files if they already exist.

Details

Uploads and downloads are recursive, so if you specify a directory, everything inside the directory will also be downloaded.

With the change to package ssh, we create ssh session objects (C pointers) internally, and cache them, then look them up in the cache based on combination of user and IP address. That is, there’s separate sessions for each user for the same IP address.

ssh sessions are cleaned up at the end of your R session.

Value

On success, the droplet (invisibly). On failure, throws an error.
Examples

```r
## Not run:

d <- droplet_create() %>% droplet_wait()

# Upgrade system packages

d %>%
  droplet_ssh("apt-get update") %>%
  droplet_ssh("sudo apt-get upgrade -y --force-yes") %>%
  droplet_ssh("apt-get autoremove -y")

# Install R

d %>%
  droplet_ssh("apt-get install r-base-core r-base-dev --yes --force-yes")

# Upload and download files

tmp <- tempfile()
saveRDS(mtcars, tmp)
d %>%
  droplet_upload(tmp, ".")
d %>%
  droplet_ssh("ls")

tmp2 <- tempdir()
d %>%
  droplet_download(basename(tmp), tmp2)
mtcars2 <- readRDS(file.path(tmp2, basename(tmp)))
stopifnot(all.equal(mtcars, mtcars2))

## another upload/download example

tmp <- tempfile(fileext = ".txt")
writelines("foo bar", tmp)
readLines(tmp)
d %>%
  droplet_upload(tmp, ".")
d %>%
  droplet_ssh("ls")

tmp2 <- tempdir()
unlink(tmp)
d %>%
  droplet_download(basename(tmp), tmp2)
readLines(file.path(tmp2, basename(tmp)))

## End(Not run)
```

droplet_upgrades_list  List all droplets that are scheduled to be upgraded.

Description

List all droplets that are scheduled to be upgraded.
droplet_wait

Usage

droplet_upgrades_list(...)

Arguments

... Additional options passed down to low-level API method.

Examples

## Not run:

droplet_upgrades_list()

## End(Not run)

droplet_wait

Wait for a droplet to be ready.

Description

Wait for a droplet to be ready.

Usage

droplet_wait(droplet)

Arguments

droplet A droplet, or something that can be coerced to a droplet by as.droplet.

Examples

## Not run:

droplet_create() %>% droplet_wait()

## End(Not run)
firewall_add_droplets  Add/remove droplets to a firewall

Description

Add/remove droplets to a firewall

Usage

firewall_add_droplets(id, droplet_ids, ...)

firewall_remove_droplets(id, droplet_ids, ...)

Arguments

id     (character) A firewall id (not the name) to delete
droplet_ids  (integer/numeric) a vector of droplet ids
...     Options passed on to http::POST or http::DELETE

Examples

## Not run:
drops <- droplets_create()
drop_ids <- vapply(drops, "[[", numeric(1), "id")
inbound <- list(list(protocol = "tcp", ports = "80", sources = list(addresses = "18.0.0.0/8")))
outbound <- list(list(protocol = "tcp", ports = "80", destinations = list(addresses = "0.0.0.0/0")))
res <- firewall_create("myfirewall", inbound, outbound)
firewall_add_droplets(id = res$id, droplet_ids = drop_ids)
firewalls()$droplet_ids
firewall_remove_droplets(id = res$id, droplet_ids = drop_ids)

## End(Not run)

firewall_add_tags  Add/remove tags to a firewall

Description

Add/remove tags to a firewall

Usage

firewall_add_tags(id, tags, ...)

firewall_remove_tags(id, tags, ...)

## Not run:
drops <- droplets_create()
drop_ids <- vapply(drops, "[[", numeric(1), "id")
inbound <- list(list(protocol = "tcp", ports = "80", sources = list(addresses = "18.0.0.0/8")))
outbound <- list(list(protocol = "tcp", ports = "80", destinations = list(addresses = "0.0.0.0/0")))
res <- firewall_create("myfirewall", inbound, outbound)
firewall_add_tags(id = res$id, tags = drop_ids)
firewall_remove_tags(id = res$id, tags = drop_ids)

## End(Not run)
**firewall_delete**

Delete a firewall

**Description**
Delete a firewall

**Usage**

```
firewall_delete(id, ...)  
```

**Arguments**

- **id**
  A firewall id (not the name) to delete
- **tags**
  (character) tag strings
- **...**
  Options passed on to `httr::POST` or `httr::DELETE`  

**Examples**

```r
## Not run:
firewall_delete(id="d19b900b-b03e-4e5d-aa85-2ff8d2786f28")
## End(Not run)
```
### image_actions

*Retrieve an action associated with a particular image id.*

**Description**

Retrieve an action associated with a particular image id.

**Usage**

```r
describe(image_actions(image, action_id, ...))
```

**Arguments**

- `image`: An image to modify.
- `action_id`: An action id associated with an image.
- `...`: Options passed on to `httr::GET`. Must be named, see examples.

**Examples**

```r
## Not run:
describe(image_actions(5710271, 31221438))
## End(Not run)
```

### image_convert

*Convert an backup image to a snapshot.*

**Description**

Convert an backup image to a snapshot.

**Usage**

```r
describe(image_convert(image, ...))
```

**Arguments**

- `image`: An image to modify.
- `...`: Options passed on to `httr::GET`. Must be named, see examples.
image_delete

Examples

```r
## Not run:
# get a backup image
img <- images(TRUE)[[1]]
# then convert to a snapshot
# image_convert(img)

## End(Not run)
```

---

image_delete Rename/delete an image

Description

There is no way to restore a deleted image so be careful and ensure your data is properly backed up before deleting it.

Usage

```r
image_delete(image, ...)

image_rename(image, name, ...)
```

Arguments

- `image` An image to modify.
- `...` Options passed on to `httr::GET`. Must be named, see examples.
- `name` (character) New name for image.

Examples

```r
## Not run:
image_delete(5620385)

# Delete all of your snapshots
## BE CAREFUL WITH THIS ONE
# lapply(images(TRUE), image_delete)

## End(Not run)
```
image_transfer  Transfer an image to a specified region.

Description
Transfer an image to a specified region.

Usage
image_transfer(image, region, ...)

Arguments
image  An image to modify.
region (numeric) Required. The region slug that represents the region target.
... Options passed on to httr::GET. Must be named, see examples.

Examples
## Not run:
image_transfer(image=images(TRUE)[[1]], region='nyc2')
image_transfer(image=images(TRUE)[[1]], region='ams2')

## End(Not run)

key-crud  Create, update, and delete ssh keys.

Description
Create, update, and delete ssh keys.

Usage
key_create(name, public_key, ...)
key_rename(key, name, ...)
key_delete(key, ...)

Arguments
name (character) The name to give the new SSH key in your account.
public_key (character) A string containing the entire public key.
... Other options passed on to low-level API methods.
key (key) Key to modify.
keys

List your ssh keys, or get a single key

Description

List your ssh keys, or get a single key

Usage

keys(..., page = 1, per_page = 25)

key(x, ...)

as.sshkey(x)

Arguments

... Additional arguments passed down to low-level API function (do_*)
per_page Number of results per page. Default: 25.
x For key the numeric id. For as.sshkey, a number (the id), a string (the name), or a key.

Examples

## Not run:
keys()
as.sshkey(328037)
as.sshkey("hadley")

## End(Not run)
neighbors

List neighbors

Description
List neighbors

Usage
neighbors(…)
droplet_neighbors(droplet, …)

Arguments
… Additional options passed down to low-level API method.
droplet A droplet, or something that can be coerced to a droplet by as.droplet.

Examples
## Not run:
# List a droplet's neighbors on the same physical server
droplets()[[3]] %>% droplet_neighbors()  
# List all neighbors on the same physical server
neighbors()  
## End(Not run)

nouns

Nouns to use for seeding random word selection when name not given for a droplet

Description
Nouns to use for seeding random word selection when name not given for a droplet

Details
A vector of 1000 nouns From the GitHub repo https://github.com/dariusk/corpora - the data is licensed CC0.
**project_create**

Create a project

**Description**

Create a project

**Usage**

```
project_create(name, purpose, description = NULL, environment = NULL, ...)
```

**Arguments**

- **name** (character) Name of the project. required
- **purpose** (character) The purpose of the project. The maximum length is 255 characters. For examples of valid purposes, see the "Purposes" section. required
- **description** (character) The description of the project. The maximum length is 255 characters. optional
- **environment** (character) The environment of the project’s resources. optional
- **...** Additional options passed down to POST

**Value**

A project object

**Purposes**

The purpose attribute can have one of the following values:

- Just trying out DigitalOcean
- Class project / Educational purposes
- Website or blog
- Web Application
- Service or API
- Mobile Application
- Machine learning / AI / Data processing
- IoT
- Operational / Developer tooling

If specify another value for purpose, for example "your custom purpose", your purpose will be stored as Other: your custom purpose
Environments

The environment attribute must have one of the following values:

- Development
- Staging
- Production

If another value is specified, a 400 Bad Request is returned.

Examples

```r
## Not run:
project_create(name = "venus", purpose = "Web Application")

## End(Not run)
```

---

`project_delete`  
Delete a project

Description

Delete a project

Usage

`project_delete(project, ...)`

Arguments

- `project`  
  A project to modify.
- `...`  
  Options passed on to `httr::GET`. Must be named, see examples.

Examples

```r
## Not run:
project_delete(5620385)

## End(Not run)
```
project_patch  

Update certain aspects of a project

Description

Update certain aspects of a project

Usage

```r
def project_patch(
    id,  
    name = NULL,  
    purpose = NULL,  
    description = NULL,  
    is_default = FALSE,  
    environment = NULL,  
    ...
)
```

Arguments

- **id**: project id. to update the default project use "default". required
- **name**: (character) Name of the project. required
- **purpose**: (character) The purpose of the project. The maximum length is 255 characters. For examples of valid purposes, see the "Purposes" section. required
- **description**: (character) The description of the project. The maximum length is 255 characters. optional
- **is_default**: (logical) If TRUE, all resources will be added to this project if no project is specified. default: FALSE
- **environment**: (character) The environment of the project’s resources. optional
- **...**: Additional options passed down to `POST`

project_update  

Update all aspects of a project

Description

Update all aspects of a project
Usage

project_update(
  id,
  name,
  purpose,
  description,
  is_default = FALSE,
  environment = NULL,
  ...
)

Arguments

id          project id. to update the default project use "default". required
name        (character) Name of the project. required
purpose     (character) The purpose of the project. The maximum length is 255 characters. For examples of valid purposes, see the "Purposes" section. required
description (character) The description of the project. The maximum length is 255 characters. optional
is_default  (logical) If TRUE, all resources will be added to this project if no project is specified. default: FALSE
environment (character) The environment of the project’s resources. optional
...         Additional options passed down to POST

regions      Get list of regions and their metadata

Description

Get list of regions and their metadata

Usage

regions(page = 1, per_page = 25, ...)

Arguments

per_page      Number of results per page. Default: 25.
...           Named options passed on to GET.

Examples

## Not run:
regions()

## End(Not run)
**Description**

Resize a droplet by power off, snapshot, and create new droplet

**Usage**

```resize(droplet, delete_original = TRUE, ...)
```

**Arguments**

- `droplet`: A droplet, or something that can be coerced to a droplet by `as.droplet`.
- `delete_original`: (logical) Delete original droplet. Default: `TRUE`
- `...`: Named options passed on to `droplet_create`.

**Details**

Note that you can not resize a droplet while it is powered on. Thus, this function powers off your droplet, makes a snapshot, then creates a new droplet from that snapshot. We use `droplet_wait` in between these steps to wait for each to finish. You can optionally delete the original droplet.

**Value**

A droplet

**Examples**

```r
## Not run:
d <- droplet_create()
d # current size is 512mb
d %>% resize(size = "2gb")
## End(Not run)
```
sizes

Get all the available sizes that can be used to create a droplet.

Description
Get all the available sizes that can be used to create a droplet.

Usage
sizes(page = 1, per_page = 25, ...)

Arguments
per_page Number of results per page. Default: 25.
... Named options passed on to GET.

Value
A data.frame with available sizes (RAM, disk, no. CPU’s) and their costs

Examples
## Not run:
sizes()
## End(Not run)

spaces

List all Spaces.

Description
List all Spaces.

Usage
spaces(spaces_region = NULL, spaces_key = NULL, spaces_secret = NULL, ...)

Arguments
spaces_region (character) String containing a spaces region. If missing, defaults to value stored in an environment variable DO_SPACES_REGION.
spaces_key (character) String containing a spaces access key. If missing, defaults to value stored in an environment variable DO_SPACES_ACCESS_KEY.
spaces_secret (character) String containing the secret associated with the spaces key. If missing, defaults to value stored in an environment variable DO_SPACES_SECRET_KEY.
... Additional arguments to spaces_GET
spaces_GET

Value

(list) A list of Spaces. Can be empty.

References

https://developers.digitalocean.com/documentation/spaces/#get-object

Examples

## Not run:

```r
# List all of your Spaces
spaces()
```

## End(Not run)

spaces_GET

*Internal helper method to get information about a Space*

Description

Internal helper method to get information about a Space

Usage

spaces_GET(spaces_region = NULL, spaces_key = NULL, spaces_secret = NULL, ...)

Arguments

- `spaces_region` (character) String containing a spaces region. If missing, defaults to value stored in an environment variable `DO_SPACES_REGION`.
- `spaces_key` (character) String containing a spaces access key. If missing, defaults to value stored in an environment variable `DO_SPACES_ACCESS_KEY`.
- `spaces_secret` (character) String containing the secret associated with the spaces key. If missing, defaults to value stored in an environment variable `DO_SPACES_SECRET_KEY`.
- `...` Additional arguments to `aws.s3::s3HTTP`

Value

The raw S3 response, or throws an error
### Description

DigitalOcean provides support for storing files (Objects) in Spaces. This is useful for storing related files for fast access, sharing, etc. See https://developers.digitalocean.com/documentation/spaces/ for more information. The `aws.s3` package is required to use analogsea’s Spaces functionality so be sure to install it with `install.packages("aws.s3")` prior to continuing.

### Arguments

- **space**
  - A Space, or the name of the Space as a string.
- **object**
  - (character) The name of the Object

### Details

In order to get started using the Spaces API, you’ll need to generate a new "Spaces access key" in the API section of your DigitalOcean control panel and set the key and its secret as environmental variables via `Sys.setenv`. Set the access key to `DO_SPACES_ACCESS_KEY` and its secret to `DO_SPACES_SECRET_KEY`. After that, set your region to `DO_SPACES_REGION` (e.g., nyc3). Alternatively, you can pass this information as arguments to whichever Spaces API functions you’re using.

### Examples

```r
## Not run:
# List Spaces
spaces()

# Obtain Spaces as a list of Space objects
res <- spaces()

# Print Space summary using a Space object
summary(res[["my_space_name"]])

# Create a new space
space_create("new_space_name")

## End(Not run)
```
space_create

Create a new Space

Description

Create a new Space

Usage

```r
space_create(
  name,
  spaces_region = NULL,
  spaces_key = NULL,
  spaces_secret = NULL,
  ...,
)
```

Arguments

- `name` (character) The name of the new Space
- `spaces_region` (character) String containing a spaces region. If missing, defaults to value stored in an environment variable `DO_SPACES_REGION`.
- `spaces_key` (character) String containing a spaces access key. If missing, defaults to value stored in an environment variable `DO_SPACES_ACCESS_KEY`.
- `spaces_secret` (character) String containing the secret associated with the spaces key. If missing, defaults to value stored in an environment variable `DO_SPACES_SECRET_KEY`.
- `...` Additional arguments to `aws.s3::put_bucket`

Value

(character) The name of the created Space.

Examples

```r
## Not run:
# Create a new Space
# (Names must be unique within region)
space_create("new_space_name")

## End(Not run)
```
Delete an existing Space

Description
Delete an existing Space

Usage
```r
space_delete(
  name,
  spaces_region = NULL,
  spaces_key = NULL,
  spaces_secret = NULL,
  ...
)
```

Arguments
- **name** (character) The name of the existing Space
- **spaces_region** (character) String containing a spaces region. If missing, defaults to value stored in an environment variable `DO_SPACES_REGION`.
- **spaces_key** (character) String containing a spaces access key. If missing, defaults to value stored in an environment variable `DO_SPACES_ACCESS_KEY`.
- **spaces_secret** (character) String containing the secret associated with the spaces key. If missing, defaults to value stored in an environment variable `DO_SPACES_SECRET_KEY`.
- **...** Additional arguments to `aws.s3::delete_bucket`

Value
(character) The name of the deleted Space.

Examples
```r
## Not run:
# Delete an existing Space
# (Check names within region)
space_delete("new_space_name")

## End(Not run)
```
Description

Upload a directory to an existing Space

Usage

space_download(
  name, 
  local = NULL, 
  remote = NULL, 
  spaces_region = NULL, 
  spaces_key = NULL, 
  spaces_secret = NULL, 
  ...
)

Arguments

name (character) The name of the existing Space
local (character) The name of the local directory
remote (character) The name of the remote directory
spaces_region (character) String containing a spaces region. If missing, defaults to value stored in an environment variable DO_SPACES_REGION.
spaces_key (character) String containing a spaces access key. If missing, defaults to value stored in an environment variable DO_SPACES_ACCESS_KEY.
spaces_secret (character) String containing the secret associated with the spaces key. If missing, defaults to value stored in an environment variable DO_SPACES_SECRET_KEY.
...
... Additional arguments to arrow::copy_files

Value

(character) Success/error message.

Examples

## Not run:
# Upload to an existing Space
# (Check names within region)
space_download("my_space", "my_subdir", "my_subdir", "nyc3",
spaces_key = Sys.getenv("SPACES_KEY"),
spaces_secret = Sys.getenv("SPACES_SECRET"))

## End(Not run)
space_upload  

Upload a directory to an existing Space

Description

Upload a directory to an existing Space

Usage

```r
space_upload(
  name,
  local = NULL,
  remote = NULL,
  spaces_region = NULL,
  spaces_key = NULL,
  spaces_secret = NULL,
  ...
)
```

Arguments

- **name**  
  (character) The name of the existing Space
- **local**  
  (character) The name of the local directory
- **remote**  
  (character) The name of the remote directory
- **spaces_region**  
  (character) String containing a spaces region. If missing, defaults to value stored in an environment variable DO_SPACES_REGION.
- **spaces_key**  
  (character) String containing a spaces access key. If missing, defaults to value stored in an environment variable DO_SPACES_ACCESS_KEY.
- **spaces_secret**  
  (character) String containing the secret associated with the spaces key. If missing, defaults to value stored in an environment variable DO_SPACES_SECRET_KEY.
- **...**  
  Additional arguments to `arrow::copy_files`

Value

(character) Success/error message.

Examples

```r
## Not run:
# Upload to an existing Space
# (Check names within region)
space_upload("my_space", "my_subdir", "my_subdir", "nyc3",
  spaces_key = Sys.getenv("SPACES_KEY"),
  spaces_secret = Sys.getenv("SPACES_SECRET"))

## End(Not run)
```
standardise_keys

Description

Standardise specification of ssh keys.

Usage

standardise_keys(ssh_keys = NULL)

Arguments

  ssh_keys An integer vector of given key ids, a character vector of key ids, or NULL, to use all ssh keys in account.

Value

  A integer vector of key ids.

Examples

  ## Not run:
  standardise_keys(123)
  standardise_keys(123L)
  standardise_keys()
  standardise_keys("hadley")

  ## End(Not run)

__tags__

Description

List tags

Usage

tags(...)

tag(name, ...)

as.tag(x)
Arguments

Additional options passed down to `GET`

- **name**: (character) Name of the tag
- **x**: Object to coerce to a tag.

Details

tags gets all your tag, tag gets a tag by name

Value

Many tag objects in a list

Examples

```r
## Not run:
# get all your tags
tags()

# get a tag by name
tag("stuffthings")
tag("helloworld")

## End(Not run)
## Not run:
tag_create("pluto")
as.tag("pluto")
as.tag(tag_create("howdyhoneybeyor"))

## End(Not run)
```

---

tag_create

Create a tag

Description

Create a tag

Usage

```r
tag_create(name, ...)
```

Arguments

- **name**: (character) Name of the tag
- **...**: Additional options passed down to `POST`
**tag_delete**

**Value**

A tag object

**Examples**

```r
## Not run:
tag_create(name = "venus")
## End(Not run)
```

**Description**

Delete a tag

**Usage**

```r
tag_delete(name, ...)
```

**Arguments**

- **name** (character) Name of the tag
- **...** Additional options passed down to DELETE

**Value**

nothing, if successful

**Examples**

```r
## Not run:
tag_delete(name = "helloworld")
## End(Not run)
```
tag_resource

Tag a resource

Description
Tag a resource

Usage

tag_resource(
  name,
  resource_id = NULL,
  resource_type = "droplet",
  resources = NULL,
  ...
)

Arguments

name (character) Name of the tag
resource_id (integer) a droplet id
resource_type (character) only "droplet" for now. Default: "droplet"
resources (list) instead of resource_id and resource_type you can pass in a list to this parameter. see examples
...

Value

logical, TRUE if successful

Examples

## Not run:
d <- droplet_create()
tag_resource(name = "stuffthings", resource_id = d$id,
  resource_type = "droplet")
tag_resource("stuffthings", resources = list(list(resource_id = d$id,
  resource_type = "droplet")))

## End(Not run)
tag_resource_delete  Untag a resource

Description

Untag a resource

Usage

tag_resource_delete(
  name,
  resource_id = NULL,
  resource_type = "droplet",
  resources = NULL,
  ...
)

Arguments

name  (character) Name of the tag
resource_id  (integer) a droplet id
resource_type  (character) only "droplet" for now. Default: "droplet"
resources  (list) instead of resource_id and resource_type you can pass in a list to this parameter. see examples
  ...  Additional options passed down to DELETE

Value

logical, TRUE if successful

Examples

## Not run:
d <- droplet_create()
tag_resource(name = "stuffthings", resource_id = d$id,
  resource_type = "droplet")
## same as this because only allowed resource type right now is "droplet"
# tag_resource(name = "stuffthings", resource_id = d$id)
tag_resource_delete(name = "stuffthings", resource_id = d$id,
  resource_type = "droplet")

## End(Not run)
Helpers for managing a ubuntu droplets.

**Description**

Helpers for managing a ubuntu droplets.

**Usage**

```r
ubuntu_add_swap(
  droplet,
  user = "root",
  keyfile = NULL,
  ssh_passwd = NULL,
  verbose = FALSE
)
```

```r
ubuntu_install_r(
  droplet,
  user = "root",
  keyfile = NULL,
  ssh_passwd = NULL,
  verbose = FALSE,
  rprofile = "options(repos=c('CRAN'='https://cloud.r-project.org/'))"
)
```

```r
ubuntu_install_rstudio(
  droplet,
  user = "rstudio",
  password = "server",
  version = "0.99.484",
  keyfile = NULL,
  ssh_passwd = NULL,
  verbose = FALSE
)
```

```r
ubuntu_install_shiny(
  droplet,
  version = "1.4.0.756",
  user = "root",
  keyfile = NULL,
  ssh_passwd = NULL,
  verbose = FALSE,
  rprofile = "options(repos=c('CRAN'='https://cloud.r-project.org/'))"
)
```

```r
ubuntu_apt_get_cran(
```

```r
```
droplet,
user = "root",
keyfile = NULL,
ssh_passwd = NULL,
verbose = FALSE
)

ubuntu_apt_get_update(
    droplet,
    user = "root",
    keyfile = NULL,
    ssh_passwd = NULL,
    verbose = FALSE
)

ubuntu_apt_get_install(
    droplet,
    ...
    user = "root",
    keyfile = NULL,
    ssh_passwd = NULL,
    verbose = FALSE
)

install_r_package(
    droplet,
    package,
    repo = "https://cloud.r-project.org/",
    user = "root",
    keyfile = NULL,
    ssh_passwd = NULL,
    verbose = FALSE
)

install_github_r_package(
    droplet,
    package,
    repo = "https://cloud.r-project.org/",
    user = "root",
    keyfile = NULL,
    ssh_passwd = NULL,
    verbose = FALSE
)

ubuntu_create_user(
    droplet,
    user,
    password,
ssh_user = "root",
keyfile = NULL,
ssh_passwd = NULL,
verbose = FALSE
}

Arguments

droplet        A droplet, or object that can be coerced to a droplet by as.droplet.
user          Username for non-root account.
keyfile       Optional private key file.
ssh_passwd    Optional passphrase or callback function for authentication. Refer to the ssh::ssh_connect documentation for more details.
verbose       If TRUE, will print command before executing it.
rprofile      A character string that will be added to the .Rprofile
password      Password for non-root account.
version       Version of rstudio to install.
...           Arguments to apt-get install.
package       Name of R package to install.
repo          CRAN mirror to use.
ssh_user      (character) User account for ssh commands against droplet.

Examples

## Not run:
d <- droplet_create()
d %>% ubuntu_add_swap()
d %>% ubuntu_apt_get_update()

d %>% ubuntu_install_r()
d %>% ubuntu_install_rstudio()

# Install libcurl, then build RCurl from source
d %>% ubuntu_apt_get_install("libcurl4-openssl-dev")
d %>% install_r_package("RCurl")
droplet_delete(d)

## End(Not run)
volume_attach

---

**volume_attach** | Attach a volume to a droplet

---

**Description**

Attach a volume to a droplet

**Usage**

```r
volume_attach(volume, droplet, region = "nyc1", ...)
```

```r
volume_detach(volume, droplet, region = "nyc1", ...)
```

```r
volume_resize(volume, size, region = "nyc1", ...)
```

```r
volume_action(volume, actionid, ...)
```

```r
volume_actions(volume, page = 1, per_page = 25, ...)
```

**Arguments**

- **volume** | A volume, or something that can be coerced to a volume by `as.volume`.
- **droplet** | A droplet, or something that can be coerced to a droplet by `as.droplet`.
- **region** | (character) The region where the Block Storage volume will be created. When setting a region, the value should be the slug identifier for the region. When you query a Block Storage volume, the entire region object will be returned. Should not be specified with a snapshot_id. Default: nyc1
- **...** | Additional options passed down to `GET`, `POST`, etc.
- **size** | (integer) The size of the Block Storage volume in GiB
- **actionid** | (integer) Optional. An action id.
- **page** | Page to return. Default: 1.
- **per_page** | Number of results per page. Default: 25.

**Details**

Note that there is a way to attach a volume to or remove from a droplet by name, but we only support doing this by ID. However, as the user, all you need to do is make a volume class object via `as.volume` and pass it to `volume_attach` or `volume_detach`, which is pretty darn easy.

**Examples**

```
## Not run:
# resize a volume
## create a volume
(vol1 <- volume_create('foobar', 5))
## resize it
```
volume_resize(vol1, 6)
volume(vol1)

# attach a volume to a droplet
## create a droplet
(d <- droplet_create(region = "nyc1"))
## attach volume to droplet
volume_attach(vol1, d)
## refresh droplet info, see volumes slot
droplet(d$id)

# detach a volume from a droplet
(act <- volume_detach(vol1, d))
## refresh droplet info, see volumes slot
droplet(d$id)

# list an action
volume_action(vol1, 154689758)

# list all volume actions
volume_actions(volumes()[[1]])

## End(Not run)
