Package ‘babette’

August 12, 2022

Title  Control 'BEAST2'
Version  2.3.2
Maintainer  Richèl J.C. Bilderbeek <richel@richelbilderbeek.nl>
Description  'BEAST2' (<https://www.beast2.org>) is a widely used Bayesian phylogenetic tool, that uses DNA/RNA/protein data and many model priors to create a posterior of jointly estimated phylogenies and parameters. 'BEAST2' is commonly accompanied by 'BEAUti 2', 'Tracer' and 'DensiTree'. 'babette' provides for an alternative workflow of using all these tools separately. This allows doing complex Bayesian phylogenetics easily and reproducibly from 'R'.
License  GPL-3
RoxygenNote  7.2.1
VignetteBuilder  knitr

babette

Description

'babette' provides for an alternative workflow of using the popular phylogenetics tool 'BEAST2', including its peripheral tools. From an alignment and inference model, a posterior of jointly estimated phylogenies and parameter estimates is generated.

Note

the imports are created by script 'scripts/create_imports.R'

Author(s)

Richèl J.C. Bilderbeek
See Also

Use `bbt_self_test` to do verify `babette` is installed correctly.

These are packages associated with 'babette':

- 'beautier' creates 'BEAST2' input files.
- 'beastier' runs 'BEAST2'.
- 'mauricer' does 'BEAST2' package management.
- 'tracerer' parses 'BEAST2' output files.

Examples

```r
if (beautier::is_on_ci() && is_beast2_installed()) {
  beastier::remove_beaustier_folders()
  beastier::check_empty_beaustier_folders()

  inference_model <- create_test_inference_model()
  beast2_options <- create_beast2_options()

  bbt_run_from_model(
    fasta_filename = get_babette_path("anthus_aco.fas"),
    inference_model = inference_model,
    beast2_options = beast2_options
  )

  # Clean up temporary files created by babette
  bbt_delete_temp_files(
    inference_model = inference_model,
    beast2_options = beast2_options
  )
  beastier::remove_beaustier_folders()
  beastier::check_empty_beaustier_folders()
} beastier::remove_beaustier_folders()
```

---

**bbt_continue**  
*Continue a BEAST2 run*

Description

Do a full run: create a 'BEAST2' configuration file (like 'BEAUti 2'), run 'BEAST2', parse results (like 'Tracer')

Usage

`bbt_continue(fasta_filename, inference_model, beast2_options)`
Arguments

- `fasta_filename` a FASTA filename
- `inference_model` a Bayesian phylogenetic inference model, as returned by `create_inference_model`
- `beast2_options` 'BEAST2' options, as can be created by `create_beast2_options`

Value

a list with the following elements:

- `estimates` a data frame with 'BEAST2' parameter estimates
- `[alignment_id]_trees` a `multiPhylo` containing the phylogenies in the 'BEAST2' posterior. `[alignment_id]` is the ID of the alignment. For example, when running `bbt_run_from_model` with `anthus_aco.fas`, this element will have name `anthus_aco_trees`
- `operators` a data frame with the 'BEAST2' MCMC operator acceptances
- `output` a numeric vector with the output sent to standard output and error streams
- `ns` (optional) the results of a marginal likelihood estimation, will exist only when `create_ns_mcmc` was used for `mcmc`. This structure will contain the following elements:
  - `marg_log_lik` the marginal log likelihood estimate
  - `marg_log_lik_sd` the standard deviation around the estimate
  - `estimates` the parameter estimates created during the marginal likelihood estimation
  - `trees` the trees created during the marginal likelihood estimation

Author(s)

Richèl J.C. Bilderbeek

See Also

Use `remove_burn_ins` to remove the burn-ins from the posterior’s estimates (`posterior$estimates`)

Examples

```r
if (beautier::is_on_ci() && is_beast2_installed()) {
  beautier::remove_beautier_folders()
  beautier::check_empty_beautier_folders()

  # A simple FASTA file
  fasta_filename <- beautier::get_beautier_path("test_output_0.fas")

  # Simple short inference
  inference_model <- create_test_inference_model()

  # Default BEAST2 options
  beast2_options <- create_beast2_options()

  bbt_run_from_model(
```
**bbt_delete_temp_files**

Delete all the temporary files created by *bbt_run_from_model*

**Description**

Delete all the temporary files created by *bbt_run_from_model*

**Usage**

`bbt_delete_temp_files(inference_model, beast2_options)`

**Arguments**

- **inference_model**
  - a Bayesian phylogenetic inference model, as returned by `create_inference_model`
- **beast2_options**
  - `BEAST2` options, as can be created by `create_beast2_options`

**Author(s)**

Richèl J.C. Bilderbeek

**Examples**

```r
if (beautier::is_on_ci() && is_beast2_installed()) {
  beastier::remove_beaustier_folders()
  beastier::check_empty_beaustier_folders()

  # Do a minimal run
  inference_model <- create_test_inference_model()
```
beast2_options <- create_beast2_options()

bbt_run_from_model(
  fasta_filename = get_fasta_filename(),
  inference_model = inference_model,
  beast2_options = beast2_options
)

# Cleanup
bbt_delete_temp_files(
  inference_model = inference_model,
  beast2_options = beast2_options
)

beastier::remove_beastier_folders()

beastier::check_empty_beastier_folders()
}

---

**bbt_run**  
**Run BEAST2**

**Description**

Do a full BEAST2 run: create a 'BEAST2' configuration file (like 'BEAUti 2'), run 'BEAST2', parse results (like 'Tracer')

**Usage**

```r
bbt_run(
  fasta_filename,
  tipdates_filename = NA,
  site_model = beautier::create_jc69_site_model(),
  clock_model = beautier::create_strict_clock_model(),
  tree_prior = beautier::create_yule_tree_prior(),
  mrca_prior = NA,
  mcmc = beautier::create_mcmc(),
  beast2_input_filename = beastier::create_temp_input_filename(),
  rng_seed = 1,
  beast2_output_state_filename = beastier::create_temp_state_filename(),
  beast2_path = beastier::get_default_beast2_path(),
  overwrite = TRUE,
  verbose = FALSE
)
```

**Arguments**

- `fasta_filename` a FASTA filename
- `tipdates_filename` name of the file containing tip dates
**site_model**  
one site model, see `create_site_models`

**clock_model**  
one clock model, see `create_clock_model`

**tree_prior**  
one tree priors, as created by `create_tree_prior`

**mrca_prior**  
one Most Recent Common Ancestor prior, as returned by `create_mrca_prior`

**mcmc**  
the MCMC options, see `create_mcmc`

**beast2_input_filename**  
path of the 'BEAST2' configuration file. By default, this file is put in a temporary folder with a random filename, as the user needs not read it: it is used as input of 'BEAST2'. Specifying a `beast2_input_filename` allows to store that file in a more permanently stored location.

**rng_seed**  
the random number generator seed. Must be either NA or a positive non-zero value. An RNG seed of NA results in 'BEAST2' picking a random seed.

**beast2_output_state_filename**  
name of the final state file created by 'BEAST2', containing the operator acceptances. By default, this file is put a temporary folder with a random filename, as the user needs not read it: its content is parsed and returned by this function. Specifying a `beast2_output_state_filename` allows to store that file in a more permanently stored location.

**beast2_path**  
name of either a 'BEAST2' binary file (usually simply beast) or a 'BEAST2' jar file (usually has a .jar extension). Use `get_default_beast2_bin_path` to get the default BEAST binary file’s path Use `get_default_beast2_jar_path` to get the default BEAST jar file’s path

**overwrite**  
will 'BEAST2' overwrite files? Like 'BEAST2', this is set to TRUE by default. If TRUE, 'BEAST2' will overwrite the `beast2_options$output_state_filename` if its present. If FALSE, 'BEAST2' will not overwrite the `beast2_options$output_state_filename` if its present and `babette` will give an error message. Note that if overwrite is set to FALSE when a tracelog (see `create_tracelog`), screenlog (see `create_screenlog`) or treelog (see `create_treelog`) file already exists, 'BEAST2' (and thus `babette`) will freeze.

**verbose**  
set to TRUE for more output

**Details**

Prefer using `bbt_run_from_model`, as it has a cleaner interface.

**Value**

a list with the following elements:

- **estimates**: a data frame with 'BEAST2' parameter estimates
- **[alignment_id]_trees**: a multiPhylo containing the phylogenies in the 'BEAST2' posterior. [alignment_id] is the ID of the alignment. For example, when running `bbt_run` with `anthus_aco.fas`, this element will have name `anthus_aco_trees`
- **operators**: a data frame with the 'BEAST2' MCMC operator acceptances
- **output**: a numeric vector with the output sent to standard output and error streams
• ns: (optional) the results of a marginal likelihood estimation, will exist only when `create_ns_mcmc` was used for the MCMC. This structure will contain the following elements:
  – marg_log_lik the marginal log likelihood estimate
  – marg_log_lik_sd the standard deviation around the estimate
  – estimates the parameter estimates created during the marginal likelihood estimation
  – trees the trees created during the marginal likelihood estimation

See Also
Use `remove_burn_ins` to remove the burn-ins from the posterior’s estimates (`posterior$estimates`)

Examples
```r
if (beautier::is_on_ci() && is_beast2_installed()) {
  beastier::remove_beastier_folders()
  beastier::check_empty_beastier_folders()

  # Setup for a short run
  mcmc <- create_test_mcmc()

  # Store filenames for cleanup.
  # Note that `bbt_run_from_model` allows for easier cleanup
  mcmc$tracelog$filename <- tempfile()
  mcmc$treelog$filename <- tempfile()
  mcmc$screenlog$filename <- tempfile()
  beast2_input_filename <- tempfile()
  beast2_output_state_filename <- tempfile()

  bbt_run(
    fasta_filename = get_babette_path("anthus_aco.fas"),
    beast2_input_filename = beast2_input_filename,
    beast2_output_state_filename = beast2_output_state_filename,
    mcmc = mcmc
  )

  # Cleanup
  # Again, note that `bbt_run_from_model` allows for easier cleanup
  file.remove(mcmc$tracelog$filename)
  file.remove(mcmc$treelog$filename)
  file.remove(mcmc$screenlog$filename)
  file.remove(beast2_input_filename)
  file.remove(beast2_output_state_filename)
  beastier::remove_beastier_folders()
  beastier::check_empty_beastier_folders()
}
```
**bbt_run_from_model**  
*Run BEAST2*

**Description**
Do a full run: create a 'BEAST2' configuration file (like 'BEAUti 2'), run 'BEAST2', parse results (like 'Tracer')

**Usage**

```
bbt_run_from_model(  
  fasta_filename,  
  inference_model = beautier::create_inference_model(),  
  beast2_options = beastier::create_beast2_options()  
)
```

**Arguments**

- `fasta_filename`: a FASTA filename
- `inference_model`: a Bayesian phylogenetic inference model, as returned by `create_inference_model`
- `beast2_options`: 'BEAST2' options, as can be created by `create_beast2_options`

**Value**

A list with the following elements:

- `estimates`: a data frame with 'BEAST2' parameter estimates
- `[alignment_id]_trees`: a multiPhylo containing the phylogenies in the 'BEAST2' posterior. `[alignment_id]` is the ID of the alignment. For example, when running `bbt_run_from_model` with `anthus_aco.fas`, this element will have name `anthus_aco_trees`
- `operators`: a data frame with the 'BEAST2' MCMC operator acceptances
- `output`: a numeric vector with the output sent to standard output and error streams
- `ns` (optional) the results of a marginal likelihood estimation, will exist only when `create_ns_mcmc` was used for mcmc. This structure will contain the following elements:
  - `marg_log_lik` the marginal log likelihood estimate
  - `marg_log_lik_sd` the standard deviation around the estimate
  - `estimates` the parameter estimates created during the marginal likelihood estimation
  - `trees` the trees created during the marginal likelihood estimation

See Also

Use `remove_burn_ins` to remove the burn-ins from the posterior’s estimates (`posterior$estimates`).

Examples

```r
if (beautier::is_on_ci() && is_beast2_installed()) {
  beastier::remove_beaustier_folders()
  beastier::check_empty_beaustier_folders()

  # Simple short inference
  inference_model <- create_test_inference_model()

  # Default BEAST2 options
  beast2_options <- create_beast2_options()

  bbt_run_from_model(
    fasta_filename = get_babette_path("anthus_aco.fas"),
    inference_model = inference_model,
    beast2_options = beast2_options
  )

  # Cleanup
  bbt_delete_temp_files(
    inference_model = inference_model,
    beast2_options = beast2_options
  )
  beastier::remove_beaustier_folders()
  beastier::check_empty_beaustier_folders()
}
```

---

**bbt_self_test**

*Do a self test to verify `babette` that works correctly.*

**Description**

Do a self test to verify `babette` that works correctly.

**Usage**

```r
bbt_self_test(beast2_options = beastier::create_beast2_options())
```

**Arguments**

- `beast2_options` 'BEAST2’ options, as can be created by `create_beast2_options`

**Author(s)**

Richèl J.C. Bilderbeek
check_beast2_pkgs

Examples

```r
if (beautier::is_on_ci() && is_beast2_installed()) {
    beastier::remove_beaustier_folders()
    beastier::check_empty_beaustier_folders()

    bbt_self_test()

    beastier::remove_beaustier_folders()
    beastier::check_empty_beaustier_folders()
}
```

check_beast2_pkgs Checks if `bbt_run` has the 'BEAST2' packages needed to process its arguments. Will stop if not.

Description

For example, to use a Nested Sampling MCMC, the 'BEAST2' 'NS' package needs to be installed.

Usage

```r
check_beast2_pkgs(mcmc, beast2_path = get_default_beast2_bin_path())
```

Arguments

- **mcmc**: the MCMC options, see `create_mcmc`
- **beast2_path**: name of either a 'BEAST2' binary file (usually simply `beast`) or a 'BEAST2' jar file (usually has a `.jar` extension). Use `get_default_beast2_bin_path` to get the default BEAST binary file’s path Use `get_default_beast2_jar_path` to get the default BEAST jar file’s path

Examples

```r
if (beautier::is_on_ci() && is_beast2_installed()) {
    beastier::remove_beaustier_folders()
    beastier::check_empty_beaustier_folders()

    # Minimal BEAST2 setup
    check_beast2_pkgs(mcmc = create_mcmc())

    # BEAST2 with NS package installed
    if (is_beast2_ns_pkg_installed()) {
        check_beast2_pkgs(mcmc = create_ns_mcmc())
    }
}
```

beastier::remove_beaustier_folders()
beastier::check_empty_beaustier_folders()
create_test_bbt_run_output

Get an example output of `bbt_run` or `bbt_run_from_model`.

Description
This output is used in testing.

Usage
create_test_bbt_run_output()

Value
the same results as `bbt_run` or `bbt_run_from_model`

Author(s)
Richèl J.C. Bilderbeek

Examples
beastier::remove_beaustier_folders()
beastier::check_empty_beaustier_folders()
create_test_bbt_run_output()

create_test_bbt_run_output

create_test_ns_output

Description
Create NS testing output

Usage
create_test_ns_output()

Author(s)
Richèl J.C. Bilderbeek
See Also

Use `parse_beast2_output_to_ns` to parse this output to a Nested Sampling result. See `create_ns_mcmc` to see how to do a marginal likelihood estimation using Nested Sampling.

Examples

```R
beastier::remove_beaustier_folders()
beastier::check_empty_beaustier_folders()

create_test_ns_output()

beastier::remove_beaustier_folders()
beastier::check_empty_beaustier_folders()
```

Description

This function does nothing. It is intended to inherit is parameters’ documentation.

Usage

```R
default_params_doc(
  beast2_input_filename,
  beast2_options,
  beast2_output_log_filename,
  beast2_output_state_filename,
  beast2_output_trees_filenames,
  beast2_path,
  beast2_working_dir,
  cleanup,
  clock_model,
  clock_models,
  fasta_filename,
  fasta_filenames,
  inference_model,
  mcmc,
  mrca_prior,
  mrca_priors,
  overwrite,
  rng_seed,
  site_model,
  site_models,
  tipdates_filename,
  tree_prior,
)```

tree_priors,
verbose
)

Arguments

beast2_input_filename

path of the 'BEAST2' configuration file. By default, this file is put in a temporary folder with a random filename, as the user needs not read it: it is used as input of 'BEAST2'. Specifying a beast2_input_filename allows to store that file in a more permanently stored location.

beast2_options 'BEAST2' options, as can be created by create_beast2_options

beast2_output_log_filename

name of the log file created by 'BEAST2', containing the parameter estimates in time. By default, this file is put a temporary folder with a random filename, as the user needs not read it: its content is parsed and returned by this function. Specifying a beast2_output_log_filename allows to store that file in a more permanently stored location.

beast2_output_state_filename

name of the final state file created by 'BEAST2', containing the operator acceptances. By default, this file is put a temporary folder with a random filename, as the user needs not read it: its content is parsed and returned by this function. Specifying a beast2_output_state_filename allows to store that file in a more permanently stored location.

beast2_output_trees_filenames

name of the one or more trees files created by 'BEAST2', one per alignment. By default, these files are put a temporary folder with a random filename, as the user needs not read it: their content is parsed and returned by this function. Specifying beast2_output_trees_filenames allows to store these one or more files in a more permanently stored location.

beast2_path name of either a 'BEAST2' binary file (usually simply beast) or a 'BEAST2' jar file (usually has a .jar extension). Use get_default_beast2_bin_path to get the default BEAST binary file's path Use get_default_beast2_jar_path to get the default BEAST jar file's path

beast2_working_dir

the folder 'BEAST2' will work in. This is an (empty) temporary folder by default. This allows to call 'BEAST2' in multiple parallel processes, as each process can have its own working directory

cleanup

set to FALSE to keep all temporary files

clock_model one clock model, see create_clock_model

clock_models one or more clock models, see create_clock_models

fasta_filename

a FASTA filename

fasta_filenames

one or more FASTA filename, each with one alignment

inference_model

a Bayesian phylogenetic inference model, as returned by create_inference_model
get_alignment_ids_from_xml

Get the alignment IDs from one or more `BEAST2` XML input files.

**Description**

Get the alignment IDs from one or more `BEAST2` XML input files.

**Usage**

```
get_alignment_ids_from_xml(xml_filename)
```

**Arguments**

- `xml_filename` name of a `BEAST2` XML input file.
Value

a character vector with one or more alignment IDs.

Author(s)

Richèl J.C. Bilderbeek

Examples

beastier::remove_beastier_folders()
beastier::check_empty_beastier_folders()

alignment_ids <- get_alignment_ids_from_xml(
  get_babette_path("anthus_2_4.xml")
)

beastier::remove_beastier_folders()
beastier::check_empty_beastier_folders()

get_babette_path

Get the full path of a file in the inst/extdata folder

Description

Get the full path of a file in the inst/extdata folder

Usage

get_babette_path(filename)

Arguments

filename the file’s name, without the path

Value

the full path of the filename, if and only if the file is present. Will stop otherwise.

Author(s)

Richèl J.C. Bilderbeek

See Also

for more files, use get_babette_paths
get_babette_paths

Examples

beastier::remove_beaustier_folders()
beastier::check_empty_beaustier_folders()

get_babette_path("anthus_aco.fas")

beastier::remove_beaustier_folders()
beastier::check_empty_beaustier_folders()

---

get_babette_paths  Get the full paths of files in the inst/extdata folder

Description

Get the full paths of files in the inst/extdata folder

Usage

get_babette_paths(filenames)

Arguments

filenames  the files’ names, without the path

Value

the filenames’ full paths, if and only if all files are present. Will stop otherwise.

Author(s)

Richèl J.C. Bilderbeek

See Also

for one file, use get_babette_path

Examples

beastier::remove_beaustier_folders()
beastier::check_empty_beaustier_folders()

get_babette_paths(c("anthus_aco.fas", "anthus_nd2.fas"))

beastier::remove_beaustier_folders()
beastier::check_empty_beaustier_folders()
parse_beast2_output

Process the 'BEAST2' output dependent on 'BEAST2' package specifics

Description

Process the 'BEAST2' output dependent on 'BEAST2' package specifics

Usage

parse_beast2_output(out, inference_model)

Arguments

out a list with the complete babette output, with elements:
  • output textual output of a 'BEAST2' run
inference_model a Bayesian phylogenetic inference model, as returned by create_inference_model

Value

complete babette output with added attributes, which depends on the 'BEAST2' package.
  • marg_log_lik the marginal log likelihood estimate
  • marg_log_lik_sd the standard deviation around the estimate
  • estimates the parameter estimates created during the marginal likelihood estimation
  • trees the trees created during the marginal likelihood estimation

Author(s)

Richèl J.C. Bilderbeek

parse_beast2_output_to_ns

Parse BEAST2 NS output

Description

Parse the BEAST2 output when run with the BEAST2 NS ('Nested Sampling') package.

Usage

parse_beast2_output_to_ns(output)
**plot_densitree**

**Arguments**

output screen output

**Value**

a list with the following elements:

- marg_log_lik the marginal log likelihood estimate
- marg_log_lik_sd the standard deviation around the estimate

**Author(s)**

Richèl J.C. Bilderbeek

**See Also**

use `create_test_ns_output` to obtain a test screen output.

**Examples**

```r
beastier::remove_beaustier_folders()
beastier::check_empty_beaustier_folders()

parse_beast2_output_to_ns(
  output = create_test_ns_output()
)

beastier::remove_beaustier_folders()
beastier::check_empty_beaustier_folders()
```

---

**plot_densitree**  Draw multiple trees on top of one another.

**Description**

Draw multiple trees on top of one another.

**Usage**

```r
plot_densitree(phylos, ...)
```

**Arguments**

- `phylos` one or more phylogenies, must be of class `multiPhylo`
- `...` options to be passed to phangorn’s `densiTree` function

**Value**

nothing. Will produce a plot.
prepare_file_creation

Author(s)
Richèl J.C. Bilderbeek

Examples

```r
if (beautier::is_on_ci() && is_beast2_installed()) {
    beastier::remove_beastier_folders()
    beastier::check_empty_beastier_folders()

    inference_model <- create_test_inference_model()
    beast2_options <- create_beast2_options()

    out <- bbt_run_from_model(
        get_babette_path("anthus_aco.fas"),
        inference_model = inference_model,
        beast2_options = beast2_options
    )
    bbt_delete_temp_files(
        inference_model = inference_model,
        beast2_options = beast2_options
    )

    plot_densitree(out$anthus_aco_trees)

    # Clean up temporary files created by babette
    bbt_delete_temp_files(
        inference_model = inference_model,
        beast2_options = beast2_options
    )
    beastier::remove_beastier_folders()
    beastier::check_empty_beastier_folders()
}
```

Description

The inference model and 'BEAST2' options contain paths that may point to sub-sub-sub folders. Create those folders and test if these folders can be written to

Usage

```r
prepare_file_creation(inference_model, beast2_options)
```

Arguments

- `inference_model`:
  a Bayesian phylogenetic inference model, as returned by `create_inference_model`
- `beast2_options`:
  'BEAST2' options, as can be created by `create_beast2_options`
update_babette

Examples

# This example will fail on the CRAN
# r-oldrel-macos-x86_64 platform
if (rappdirs::app_dir()$os != "mac") {
  beastier::remove_beaustier_folders()
  beastier::check_empty_beaustier_folders()

  # For a test inference model, the files can be prepared

update_babette

Update all babette dependencies, by installing their latest versions

Description

Update all babette dependencies, by installing their latest versions

Usage

update_babette(upgrade = "default")

Arguments

upgrade Should package dependencies be upgraded? One of "default", "ask", "always", or "never". "default" respects the value of the R_REMOTES_UPGRADE environment variable if set, and falls back to "ask" if unset. "ask" prompts the user for which out of date packages to upgrade. For non-interactive sessions "ask" is equivalent to "always". TRUE and FALSE are also accepted and correspond to "always" and "never" respectively.

Author(s)

Giovanni Laudanno, Richèl J.C. Bilderbeek

Examples

## Not run:
# Updates the babette dependencies without asking

## End(Not run)
beastier::remove_beaustier_folders()
