bincorr2commonprob  

Convert Binary Correlation Matrix to Matrix of Joint Probabilities

Description

Compute a matrix of common probabilities for a binary random vector from given marginal probabilities and correlations.

Usage

bincorr2commonprob(margprob, bincorr)

Arguments

margprob  
vector of marginal probabilities.

bincorr  
matrix of binary correlations.

Value

The matrix of common probabilities. This has the probabilities that variable $i$ equals 1 in element $(i, i)$, and the joint probability that variables $i$ and $j$ both equal 1 in element $(i, j)$ (if $i \neq j$).

Author(s)

Friedrich Leisch

References

See Also

commonprob2sigma, simul.commonprob.
Description

The main diagonal elements commonprob[i, i] are interpreted as probabilities \( p_{A_i} \) that a binary variable \( A_i \) equals 1. The off-diagonal elements commonprob[i, j] are the probabilities \( p_{A_i, A_j} \) that both \( A_i \) and \( A_j \) are 1.

This program checks some necessary conditions on these probabilities which must be fulfilled in order that a joint distribution of the \( A_i \) with the given probabilities can exist.

The conditions checked are

\[
0 \leq p_{A_i} \leq 1 \\
\max(0, p_{A_i} + p_{A_j} - 1) \leq p_{A_i, A_j} \leq \min(p_{A_i}, p_{A_j}), i \neq j \\
p_{A_i} + p_{A_j} + p_{A_k} - p_{A_i, A_j} - p_{A_i, A_k} - p_{A_j, A_k} \leq 1, i \neq j, i \neq k, j \neq k
\]

Usage

\[
\text{check\_commonprob(commonprob)}
\]

Arguments

commonprob Matrix of pairwise probabilities.

Value

check.commonprob returns TRUE, if all conditions are fulfilled. The attribute "message" of the return value contains some information on the errors that were found.

Examples

check.commonprob(cbind(c(0.5, 0.4), c(0.4, 0.8)))
check.commonprob(cbind(c(0.5, 0.25), c(0.25, 0.8)))
check.commonprob(cbind(c(0.5, 0, 0), c(0, 0.5, 0), c(0, 0, 0.5)))

commonprob2sigma  Calculate a Covariance Matrix for the Normal Distribution from a Matrix of Joint Probabilities

Description

Computes a covariance matrix for a normal distribution which corresponds to a binary distribution with marginal probabilities given by diag(commonprob) and pairwise probabilities given by commonprob.

For the simulations the values of simulvals are used.

If a non-valid covariance matrix is the result, the program stops with an error in the case of NA arguments and yields are warning message if the matrix is not positive definite.

Usage

commonprob2sigma(commonprob, simulvals)

Arguments

commonprob  matrix of pairwise probabilities.
simulvals   array received by simul.commonprob.

Value

A covariance matrix is returned with the same dimensions as commonprob.

### Examples

```r
m <- cbind(c(1/2,1/5,1/6),c(1/5,1/2,1/6),c(1/6,1/6,1/2))
sigma <- commonprob2sigma(m)
```

---

**condprob**

*Conditional Probabilities of Binary Data*

### Description

Returns a matrix containing the conditional probabilities $P(x_i = 1|x_j = 1)$ where $x_i$ corresponds to the $i$-th column of $x$.

### Usage

```r
condprob(x)
```

### Arguments

- **x**: matrix of binary data with rows corresponding to cases and columns corresponding to variables.

### Author(s)

Friedrich Leisch

---

**ra2ba**

*Convert Real Valued Array to Binary Array*

### Description

Converts all values of the real valued array $x$ to binary values by thresholding at 0.

### Usage

```r
ra2ba(x)
```

### Arguments

- **x**: array of arbitrary dimension

### Author(s)

Friedrich Leisch

### Examples

```r
x <- array(rnorm(10), dim=c(2,5))
ra2ba(x)
```
Description

Creates correlated multivariate binary random variables by thresholding a normal distribution. The correlations of the components can be specified either as common probabilities, correlation matrix of the binary distribution, or covariance matrix of the normal distribution.

Usage

```r
rmvbin(n, margprob, commonprob=diag(margprob),
       bincorr=diag(length(margprob)),
       sigma=diag(length(margprob)),
       colnames=NULL, simulvals=NULL)
```

Arguments

- `n`: number of observations.
- `margprob`: margin probabilities that the components are 1.
- `commonprob`: matrix of probabilities that components i and j are simultaneously 1.
- `bincorr`: matrix of binary correlations.
- `sigma`: covariance matrix for the normal distribution.
- `colnames`: vector of column names for the resulting observation matrix.
- `simulvals`: result from `simul.commonprob`, a default data array is automatically loaded if this argument is omitted.

Details

Only one of the arguments `commonprob`, `bincorr` and `sigma` may be specified. Default are uncorrelated components.

`n` samples from a multivariate normal distribution with mean and variance chosen in order to get the desired margin and common probabilities are sampled. Negative values are converted to 0, positive values to 1.

Simulate Joint Binary Probabilities

**Description**

Compute common probabilities of binary random variates generated by thresholding normal variates at 0.

**Usage**

```r
simul.commonprob(margprob, corr=0, method="integrate", n1=10^5, n2=10)
```

**Arguments**

- `margprob`: vector of marginal probabilities.
- `corr`: vector of correlation values for normal distribution.
- `method`: either "integrate" or "monte carlo".
- `n1`: number of normal variates if method is "monte carlo".
- `n2`: number of repetitions if method is "monte carlo".

**Details**

The output of this function is used by `rmvbin`. For all combinations of `marginprob[i], marginprob[j]` and `corr[k]`, the probability that both components of a normal random variable with mean `qnorm(marginprob[c(i,j)])` and correlation `corr[k]` are larger than zero is computed.

The probabilities are either computed by numerical integration of the multivariate normal density, or by Monte Carlo simulation.

For normal usage of `rmvbin` it is not necessary to use this function, one simulation result is provided as variable `SimulVals` in this package and loaded by default.
SimulVals

Value

simul.commonprob returns an array of dimension \( c(\text{length(margprob)}, \text{length(margprob)}, \text{length(corr)}) \).

---

SimulVals  Pre-simulated Joint Binary Probabilities

Description

This variable provides a pre-fabricated result from simul.commonprob such that it is normally not necessary to use this (time consuming) function, and is used by rmvbin.

Usage

SimulVals
