Index 13
longCallCondor

Calculates per share Profit and Loss (PnL) at expiration for long Call Condor Option Strategy and draws its Bar Plot displaying PnL in the Plots tab.

Description

This strategy consists of a long position in an ITM call option with a strike price $X_{1L}$, a short position in an ITM call option with a higher strike price $X_{2Ml}$, a short position in an OTM call option with a strike price $X_{3Mu}$, and a long position in an OTM call option with a higher strike price $X_{4H}$. All strikes are equidistant: $X_{4H} - X_{3Mu}$ equals to $X_{3Mu} - X_{2Ml}$; equals to $X_{2Mu} - X_{1L}$ (Kakushadze & Serur, 2018).

Usage

```r
longCallCondor(
  ST,
  X1L,
  X2Ml,
  X3Mu,
  X4H,
  C1L,
  C2Ml,
  C3Mu,
  C4H,
  hl = 0,
  hu = 2,
  spot = spot,
  pl = pl,
  myData = myData,
  myTibble = myTibble,
  PnL = PnL
)
```

Arguments

- **ST**: Spot Price at time T.
- **X1L**: Lower Strike Price or eXercise price for an ITM long call.
- **X2Ml**: Middle-low Strike Price or eXercise price for sold call.
- **X3Mu**: Middle-upper Strike Price or eXercise price for sold Calls.
- **X4H**: Higher Strike Price or eXercise price for one OTM bought call.
- **C1L**: Call Premium or Call Price paid for the one ITM bought Call.
- **C2Ml**: Call Premium or Call Price received from the middle-low sold Call.
- **C3Mu**: Call Premium or Call Price received from the middle-upper sold Call.
- **C4H**: Call Premium or Call Price paid for the one OTM bought call.
longIronCondor

hl lower bound value for setting lower-limit of x-axis displaying spot price.
hu upper bound value for setting upper-limit of x-axis displaying spot price.
spot Spot Price
pl Profit and Loss
myData Data frame
myTibble tibble
PnL Profit and Loss

Details
According to conceptual details given by Cohen (2015), and a closed form solution provided by Kakushadze and Serur (2018), this method is developed, and the given examples are created, to compute per share Profit and Loss at expiration for Long Call Condor Option Strategy and draw its graph in the Plots tab.

Value
graph of the strategy

Examples
longCallCondor(415,400,420,440,460,50,35,22,16,hl=0.95,hu=1.125)

longIronCondor
Calculates per share Profit and Loss (PnL) at expiration for Long Iron Condor Option Strategy and draws its Bar Plot displaying PnL in the Plots tab.

Description
This strategy consists of a long position in an OTM put option with a strike price X1L, a short position in put option with higher Strike X2 price and a short position OTM (out of the money) call option with a strike price X3, and a long position in call option with a higher strike price X4H. The strikes are equidistant: X2 minus X1L equals to X4H minus X3 (Kakushadze & Serur, 2018).
Usage

```r
longIronCondor(
  ST,
  X1L,
  X2,
  X3,
  X4H,
  P1L,
  P2,
  C3,
  C4H,
  hl = 0,
  hu = 2,
  spot = spot,
  pl = pl,
  myData = myData,
  myTibble = myTibble,
  PnL = PnL
)
```

Arguments

- **ST**: Spot Price at time T.
- **X1L**: Lower Strike Price or exercise price for one OTM bought Put.
- **X2**: Strike Price or exercise price for one short Put.
- **X3**: Strike Price or exercise price for one short Call.
- **X4H**: Higher Strike Price or exercise price for one OTM bought Call.
- **P1L**: Put Premium or Put Price paid for the first OTM bought Put.
- **P2**: Put Premium or Put Price received from the sold Put.
- **C3**: Put Premium or Put Price received from the sold Call.
- **C4H**: Call Premium or Put Price paid for the one OTM bought Call.
- **hl**: lower bound value for setting lower-limit of x-axis displaying spot price.
- **hu**: upper bound value for setting upper-limit of x-axis displaying spot price.
- **spot**: Spot Price
- **pl**: Profit and Loss
- **myData**: Data frame
- **myTibble**: tibble
- **PnL**: Profit and Loss

longPutCondor

Calculates per share Profit and Loss (PnL) at expiration for Long Put
Condor Option Strategy and draws its Bar Plot displaying PnL in the
Plots tab.

Description
This strategy consists of a long position in an OTM Put option with a strike price X1L, a short
position in an OTM Put option with a higher strike price X2Ml, a short position in an ITM Put
option with a strike price X3Mu, and a long position in an ITM Put option with a higher strike price
X4H. All strikes are equidistant: X4H minus X3Mu equals to X3Mu minus X2Ml; equals to X2Mu
minus X1L(Kakushadze & Serur, 2018).

Usage
longPutCondor(
    ST,
    X1L,
    X2Ml,
    X3Mu,
    X4H,
    P1L,
    P2Ml,
    P3Mu,

longPutCondor(425,400,420,440,460,16,22.50,35.50,50,hl=0.9,hu=1.125)

shortCallCondor

Calculates per share Profit and Loss (PnL) at expiration for Short Call Condor Option Strategy and draws its Bar Plot displaying PnL in the Plots tab.

Description

This is a volatility strategy consisting of a short position in an ITM call option with a strike price X1L, a long position in an ITM call option with a higher strike price X2Ml, a long position in an OTM call option with a strike price X3Mu, and a short position in an OTM call option with a higher strike price X4H. All strikes are equidistant: X4H minus X3Mu equals to X3Mu minus X2Ml; equals to X2Mu minus X1L. This is a relatively low net credit trade. The trader or investor has a neutral outlook (Kakushadze & Serur, 2018).

Usage

shortCallCondor(
    ST,
    X1L,
    X2Ml,
    X3Mu,
    X4H,
    C1L,

Examples

shortCallCondor(415,400,420,440,460,50,35,22,16,hl=0.95,hu=1.125)
**Description**

This volatility strategy is a combination of a bear put spread and a bull call spread and consists of a short position in an OTM put option (out of the money put: Strike price is lower than spot price $X_{1L}$) with a strike price $X_{1L}$, a long position in put option with higher Strike $X_2$ price and a long position OTM (out of the money) call option with a strike price $X_3$, and a short position in call option with a higher strike price $X_{4H}$. The strikes are equidistant: $X_2$ minus $X_{1L}$ equals to $X_{4H}$ minus $X_3$. This is a net debit trade. The trader or investor has an outlook that is neutral (Kakushadze & Serur, 2018).

**Usage**

```r
shortIronCondor(ST, X1L, X2, X3, X4H, P1L, P2, C3, C4H, hl = 0, hu = 2, spot = spot, pl = pl, myData = myData, myTibble = myTibble, PnL = PnL)
```

**Arguments**

- **ST** Spot Price at time T.
- **X1L** Lower Strike Price or Exercise price for one OTM shorted Put.
- **X2** Strike Price or Exercise price for one bought Put.
- **X3** Strike Price or Exercise price for one bought Call.
- **X4H** Higher Strike Price or Exercise price for one OTM shorted Call.
- **P1L** Put Premium or Put Price received for the first OTM shorted Put.
- **P2** Put Premium or Put Price paid for the bought Put.
shortIronCondor

C3  Put Premium or Put Price paid for the bought Call.
C4H Call Premium or Put Price received for the one OTM shorted Call.

References

Examples
shortIronCondor(405,400,410,420,430,8,11,13,9,hl=0.95,hu=1.1)
shortPutCondor

Calculates per share Profit and Loss (PnL) at expiration for Short Put Condor Option Strategy and draws its Bar Plot displaying PnL in the Plots tab.

Description

This is a volatility strategy consisting of a short position in an OTM Put option with a strike price X1L, a long position in an OTM Put option with a higher strike price X2Ml, a long position in an ITM Put option with a strike price X3Mu, and a short position in an ITM Put option with a higher strike price X4H. All strikes are equidistant: X4H minus X3Mu equals to X3Mu minus X2Ml; equals to X2Mu minus X1L. This is a relatively low net credit trade. As with a short put butterfly, the potential reward is sizably smaller than with a short straddle or a short strangle (albeit with a lower risk). So, this is a capital gain (rather than an income) strategy. The trader or investor has neutral outlook (Kakushadze & Serur, 2018).

Usage

shortPutCondor(
  ST,
  X1L,
  X2Ml,
  X3Mu,
  X4H,
  P1L,
