Package ‘conmet’

August 21, 2021

Title Construct Measurement Evaluation Tool

Version 0.1.0

Description With this package you can run 'ConMET' locally in R. 'ConMET' is an R-shiny application that facilitates performing and evaluating confirmatory factor analyses (CFAs) and is useful for running and reporting typical measurement models in applied psychology and management journals. 'ConMET' automatically creates, compares and summarizes CFA models. Most common fit indices (e.g., CFI and SRMR) are put in an overview table. ConMET also allows to test for common method variance. The application is particularly useful for teaching and instruction of measurement issues in survey research. The application uses the 'lavaan' package (Rosseel, 2012) to run CFAs.

Depends R (>= 3.5.0), shiny, shinydashboard

Imports foreign, waiter, shinyWidgets, purrr, lavaan, summarytools, stringr, dplyr, Hmisc, semTools, openxlsx, DT

License GPL-3

Encoding UTF-8

RoxygenNote 7.1.1

NeedsCompilation no

**Description**

'ConMET' is an R-shiny application that facilitates performing and evaluating confirmatory factor analyses (CFAs) and is useful for running and reporting typical measurement models in applied psychology and management journals. 'ConMET' automatically creates, compares and summarizes CFA models. Most common fit indices (e.g., CFI and SRMR) are put in an overview table. 'ConMET' also allows to test for common method variance. The application is particularly useful for teaching and instruction of measurement issues in survey research. The application uses the `cfa` function from the 'lavaan' package (Rosseel, 2012) to run CFAs.

**Usage**

```r
run_conmet()
```

**Value**

Runs the 'ConMET' shiny application.

**Examples**

```r
if(interactive()){
  library(conmet)
  run_conmet()
}
```
