requests  .................................................. 2

Index  4
requests

Queries the requests made through the Brazilian Right to Information Law

Description
Downloads data for the selected years, apply a filter and return it in the form of a dataframe.

Usage
requests(year = "all", agency = "all", search = "all", answer = F)

Arguments
- year: selects the years which data will be downloaded. integer.
- agency: selects the public agency to be searched. see the available agencies in agencies_initials. character.
- search: selects the keyword to be searched. character.
- answer: if true, fetches the content of the search argument in the requests responses. boolean.

Value
a dataframe with requests containing the keyword

Examples

## Not run: requests(search = 'PAC')

appeals

Queries the appeals made through the Brazilian Right to Information Law

Description
Downloads data for the selected years, apply a filter and return it in the form of a dataframe.

Usage
appeals(year = "all", agency = "all", search = "all", answer = F)

Arguments
- year: selects the years which data will be downloaded. integer.
- agency: selects the public agency to be searched. see the available agencies in agencies_initials. character.
- search: selects the keyword to be searched. character.
- answer: if true, fetches the content of the search argument in the appeals responses. boolean.

Value
a dataframe with appeals containing the keyword

Examples

## Not run: appeals(search = 'PAC')
requests

Arguments

  year         selects the years which data will be downloaded. integer.
  agency      selects the public agency to be searched. see the available agencies in agencies_initials. character.
  search      selects the keyword to be searched. character.
  answer      if true, fetches the content of the search argument in the request responses. boolean.

Value

  a dataframe with requests containing the keyword

Examples

  ## Not run: requests(search = 'PAC')
