Title Tools to Retrieve Economic Policy Institute Data Library Extracts

Version 0.4.0

Date 2020-08-25

Maintainer Bob Rudis <bob@rud.is>

Encoding UTF-8

Description The Economic Policy Institute (<https://www.epi.org/>) provides researchers, media, and the public with easily accessible, up-to-date, and comprehensive historical data on the American labor force. It is compiled from Economic Policy Institute analysis of government data sources. Use it to research wages, inequality, and other economic indicators over time and among demographic groups. Data is usually updated monthly.

get_annual_wages_and_work_hours

Description

Annual, weekly, and hourly wages and work hours show the average wages and work hours of wage and salary workers using data from the CPS ASEC (also known as the March CPS). Note that this data is not directly comparable to the CPS ORG data in median/average hourly wage.

Usage

get_annual_wages_and_work_hours()

Value

tbl1_df
data frame

Note

CPS ASEC | Murphy and Welch (1989)
References

Economic Policy Institute Data Library

Examples

get_annual_wages_and_work_hours()

---

get_annual_wages_by_wage_group

Annual wages by wage group

Description

Return the average annual salaries for select wage groups, with particular focus on the highest wage earners. Note that this data is not directly comparable to wage deciles/percentiles.

Usage

get_annual_wages_by_wage_group()

Details

Wages are in 2017 dollars. Population sample: All workers.

The average annual wages by wage group are taken from a 2010 article by Wojciech Kopczuk, Emmanuel Saez, and Jae Song. To extend this series, data for 2006 through 2017 are extrapolated from 2004 data using changes in wage shares computed from Social Security Administration wage statistics. We employ the midpoint of the bracket to compute total wage income in each bracket and sum all brackets. We then use interpolation to derive percentile cutoffs building from the bottom up to obtain the 0–90th percentile bracket and then estimate the remaining categories. This allows us to estimate the wage shares for upper wage groups. We use these wage shares computed for 2004 and later years to extend the Kopczuk, Saez, and Song series by adding the changes in share between 2004 and the relevant year to their series. To obtain absolute wage trends we use the SSA data on the total wage pool and employment and compute the real wage per worker (based on their share of wages and employment) in the different groups in 2017 dollars. For a detailed explanation, see the methodology for annual wages and hours.

Value

tbl1_df with data filtered by the selected criteria.

data frame

Note

Data source: SSA | Kopczuk, Saez, and Song (2010)
get_black_white_wage_gap

References
Economic Policy Institute Data Library

Examples
if (not_dos()) get_annual_wages_by_wage_group()

get_black_white_wage_gap
Retreive the percent by which hourly wages of black workers are less than hourly wages of white workers

Description
The black-white wage gap is the percent by which hourly wages of black workers are less than hourly wages of white workers. It is also often expressed as a wage ratio (black workers’ share of white workers’ wages) by subtracting the gap from 100 percent.

Usage
get_black_white_wage_gap(by = NULL)

Arguments
by NULL or g for a parition by gender

Details
• A median black-white wage gap of 26.2 percent means that a typical black worker is paid 26.2 percent less per hour than a typical white worker.
• An average black-white wage gap of 26.6 percent means that on average black workers are paid 26.6 percent less per hour than white workers.
• A regression-based black-white wage gap of 15.2 percent means that on average black workers are paid 15.2 percent less per hour than white workers, all else held equal (controlling for gender, race and ethnicity, education, experience, and geographic location).

Value
tbl1_df with data filtered by the selected criteria.

References
Economic Policy Institute Data Library

Examples
if (not_dos()) get_black_white_wage_gap()
if (not_dos()) get_black_white_wage_gap("g")
get_college_wage_premium

Retreive the percent by which hourly wages of college graduates exceed those of otherwise equivalent high school graduates

Description
A regression-based college wage premium of 56.1 percent means that on average workers with a college degree are paid 56.1 percent more per hour than workers whose highest education credential is a high school diploma, all else held equal (controlling for gender, race and ethnicity, education, experience, and geographic location).

Usage
get_college_wage_premium(by = NULL)

Arguments
by NULL or g for a partition by gender

Value
tbl_df with data filtered by the selected criteria.

References
Economic Policy Institute Data Library

Examples
if (not_dos()) get_college_wage_premium()
if (not_dos()) get_college_wage_premium("g")

get_compensation_wages_and_benefits

Compensation, wages, and benefits

Description
Return the nonwage payments, referred to as fringe benefits, and wages. Compensation includes employer payments for health insurance, pensions, and payroll taxes (primarily payments toward Social Security and unemployment insurance).

Usage
get_compensation_wages_and_benefits()
get_employment_to_population_ratio

Details

Wages are in 2016 dollars. Wage and salary workers (NIPA) | Private-sector workers (ECEC)

Value

.tbl_df with data filtered by the selected criteria.
data frame

Note

Data source: NIPA | ECEC

References

Economic Policy Institute Data Library

Examples

if (not_dos()) get_compensation_wages_and_benefits()

get_employment_to_population_ratio

Retreive the share of the civilian noninstitutional population that is employed

Description

Retreive the share of the civilian noninstitutional population that is employed

Usage

get_employment_to_population_ratio(by = NULL)

Arguments

by NULL or character string with any combination of g (Gender), r (Race), a (Age), e (Education). i.e. if you want to retrieve unemployment data by gender, race and education, you would set this parameter to "gre".

Value

.tbl_df with data filtered by the selected criteria.
data frame

References

Economic Policy Institute Data Library
get_gender_wage_gap

Examples

if (not_dos()) get_employment_to_population_ratio()

if (not_dos()) get_employment_to_population_ratio("r")

if (not_dos()) get_employment_to_population_ratio("grae")

gender_wage_gap  Retreive the percent by which hourly wages of female workers are less than hourly wages of male workers

Description

The gender wage gap is the percent by which hourly wages of female workers are less than hourly wages of male workers. It is also often expressed as a wage ratio (women’s share of men’s wages) by subtracting the gap from 100 percent.

Usage

get_gender_wage_gap(by = NULL)

Arguments

by NULL or r for a parition by race

Details

- A median gender wage gap of 17.3 percent means that a typical woman is paid 17.3 percent less per hour than a typical man.
- An average gender wage gap of 19.7 percent means that on average women are paid 19.7 percent less per hour than men.
- A regression-based gender wage gap of 21.7 percent means that on average women are paid 21.7 percent less per hour than men, all else held equal (controlling for gender, race and ethnicity, education, experience, and geographic location).

Value

tbl_df with data filtered by the selected criteria.

References

Economic Policy Institute Data Library

Examples

if (not_dos()) get_gender_wage_gap()

if (not_dos())
  get_gender_wage_gap("r")
get_health_insurance_coverage

Retrieve Health Insurance Coverage

Description
Employer-sponsored health insurance (ESI) coverage shows the share of workers who received health insurance from their own job for which their employer paid for at least some of their health insurance coverage.

Usage
get_health_insurance_coverage(by = NULL)

Arguments
by NULL or character string with any combination of g (Gender), r (Race), e (Education), d (Percentile), l (Entry-level) i.e. if you want to retrieve unemployment data by gender and race, you would set this parameter to "gr".

Details
Population sample: Private-sector workers age 18–64 & at least 20 hours/week and 26 weeks/year

Value
tbl1_df with data filtered by the selected criteria.
data frame

Note
Data source: CPS ASEC

References
Economic Policy Institute Data Library

Examples
if (not_dos()) get_health_insurance_coverage()
if (not_dos()) get_health_insurance_coverage("r")
if (not_dos()) get_health_insurance_coverage("gr")
get_hispanic_white_wage_gap

Retrieve the percent by which hourly wages of Hispanic workers are less than hourly wages of white workers

Description

The Hispanic-white wage gap is the percent by which hourly wages of Hispanic workers are less than hourly wages of white workers. It is also often expressed as a wage ratio (Hispanic workers’ share of white workers’ wages) by subtracting the gap from 100 percent.

Usage

get_hispanic_white_wage_gap(by = NULL)

Arguments

by

NULL or g for a partition by gender

Details

- A median Hispanic-white wage gap of 29.6 percent means that a typical Hispanic worker is paid 29.6 percent less per hour than a typical white worker.
- An average Hispanic-white wage gap of 30.1 percent means that on average Hispanic workers are paid 30.1 percent less per hour than white workers.
- A regression-based Hispanic-white wage gap of 11.1 percent means that on average Hispanic workers are paid 11.1 percent less per hour than white workers, all else held equal (controlling for gender, race and ethnicity, education, experience, and geographic location).

Value

tbl_df with data filtered by the selected criteria.

References

Economic Policy Institute Data Library

Examples

if (not_dos()) get_hispanic_white_wage_gap()

if (not_dos()) get_hispanic_white_wage_gap("g")
get_labor_force_participation_rate

Retreive the share of the civilian noninstitutional population that is in the labor force

Description
(i.e., working or looking for work)

Usage
get_labor_force_participation_rate(by = NULL)

Arguments
by NULL or character string with any combination of g (Gender), r (Race), a (Age), e (Education). i.e. if you want to retrieve unemployment data by gender, race and education, you would set this parameter to "gre".

Value
tbl_df with data filtered by the selected criteria.

References
Economic Policy Institute Data Library

Examples
get_labor_force_participation_rate()
get_labor_force_participation_rate("r")
get_labor_force_participation_rate("grae")

get_long_term_unemployment

Retreive the share of the labor force that has been unemployed for six months or longer

Description
Retreive the share of the labor force that has been unemployed for six months or longer

Usage
get_long_term_unemployment(by = NULL)
get_median_and_mean_wages

Arguments

by  NULL or character string with any combination of g (Gender), r (Race), a (Age), e (Education). i.e. if you want to retrieve unemployment data by gender, race and education, you would set this parameter to "gre".

Value

tbl_df with data filtered by the selected criteria.

References

Economic Policy Institute Data Library

Examples

get_long_term_unemployment()
get_long_term_unemployment("r")
get_long_term_unemployment("grae")

get_median_and_mean_wages

Retrive the hourly wage in the middle of the wage distribution

Description

The median wage is the hourly wage in the middle of the wage distribution; 50 percent of wage earners earn less and 50 percent earn more. The average wage is the arithmetic mean of hourly wages; or, the sum of all workers’ hourly wages divided by the number of workers.

Usage

get_median_and_mean_wages(by = NULL)

Arguments

by  NULL or character string with any combination of g (Gender), r (Race), e (Education), d (Percentile), l (Entry-level) i.e. if you want to wage data by gender and race, you would set this parameter to "gr".

Value

tbl_df with data filtered by the selected criteria.

References

Economic Policy Institute Data Library
**Examples**

```
get_median_and_mean_wages()
get_median_and_mean_wages("r")
get_median_and_mean_wages("gr")
```

---

**Description**

Return the hourly minimum wage set by federal law. The real minimum wage is the federal hourly minimum wage adjusted for inflation.

**Usage**

```
get_minimum_wage()
```

**Details**

Wages are in 2016 dollars, excluding the nominal federal minimum wage. Share of average wages based on the average wages of production and nonsupervisory workers. For state minimum wages, see EPI's minimum wage tracker.

Population sample: Production and nonsupervisory workers (average wages)

**Value**

```
tbl_df with data filtered by the selected criteria.
data frame
```

**Note**

Data source: U.S. Department of Labor Wage and Hour Division | CES

**References**

[Economic Policy Institute Data Library](#)

**Examples**

```
if (not_dos()) get_minimum_wage()
```
get_non_high_school_wage_penalty

Retrieve the percent by which hourly wages of workers without a high school diploma (or equivalent) are less than wages of otherwise equivalent workers who have graduated from high school.

Description

A regression-based non-high school wage penalty of 21.8 percent means that on average workers without a high school diploma are paid 21.8 percent less per hour than workers with a high school diploma, all else held equal (controlling for gender, race and ethnicity, education, experience, and geographic location).

Usage

generate_non_high_school_wage_penalty(by = NULL)

Arguments

by NULL or g for a partition by gender

Value

tbl_df with data filtered by the selected criteria.

References

Economic Policy Institute Data Library

Examples

```r
# Not run:
if (not_dos()) get_non_high_school_wage_penalty()

if (not_dos()) get_non_high_school_wage_penalty("g")

# End(Not run)
```
Description

Employer-provided pension coverage shows the share of workers included in an employer-provided plan for which the employer paid for at least some of their pension coverage.

Usage

get_pension_coverage(by = NULL)

Arguments

by NULL or character string with any combination of g (Gender), r (Race), e (Education), d (Percentile), l (Entry-level) i.e. if you want to retrieve pension data by gender and race, you would set this parameter to "gr".

Details

Population sample: Private-sector workers age 18–64 & at least 20 hours/week and 26 weeks/year

Value

tbl_df with data filtered by the selected criteria.

data frame

Note

Data source: CPS ASEC

References

Economic Policy Institute Data Library

Examples

if (not_dos()) get_healthInsurance_coverage()

if (not_dos()) get_healthInsurance_coverage("r")

if (not_dos()) get_healthInsurance_coverage("gr")
**get_poverty_level_wages**

*Poverty-level wages*

**Description**

Return the share of workers earning equal to or less than the poverty-level wage, or the hourly wage that a full-time, year-round worker must earn to sustain a family of four with two children at the official poverty threshold.

**Usage**

```r
get_poverty_level_wages(by = NULL)
```

**Arguments**

- `by` NULL or character string with any combination of `g` (Gender) or `r` (Race), i.e. if you want to retrieve unemployment data by gender and race, you would set this parameter to "gr".

**Details**

Population sample: Wage and salary workers age 18–64. Data source: CPS ORG | Census Bureau (poverty threshold)

**Value**

`tbl_df` with data filtered by the selected criteria.

data frame

**References**

Economic Policy Institute Data Library

**Examples**

```r
if (not_dos()) get_poverty_level_wages()
if (not_dos()) get_poverty_level_wages("r")
if (not_dos()) get_poverty_level_wages("gr")
```
get_productivity_and_hourly_compensation

Description

Productivity is how much workers produce per hour, or the growth of output of goods and services minus depreciation per hour worked. Compensation is made up of both nonwage payments and wages.

Usage

get_productivity_and_hourly_compensation(by = NULL)

Arguments

by NULL or character string of g (Gender)

Details

Wages are in 2015 dollars. Median compensation is calculated using hourly wage medians from the CPS ORG and compensation from NIPA.

Population sample: All workers & Production and nonsupervisory workers

Value

tbl_df with data filtered by the selected criteria.
data frame

Note

Data source: NIPA (compensation) | BLS Productivity Data

References

Economic Policy Institute Data Library

Examples

if (not_dos()) get_productivity_and_hourly_compensation()

if (not_dos()) get_productivity_and_hourly_compensation("g")
get_underemployment  Retreive the share of the labor force that is "underemployed"

Description
Underemployment is the share of the labor force that either 1) is unemployed, 2) is working part time but wants and is available to work full time (an "involuntary" part timer), or 3) wants and is available to work and has looked for work in the last year but has given up actively seeking work in the last four weeks ("marginally attached" worker).

Usage
get_underemployment(by = NULL)

Arguments
by NULL or character string with any combination of g (Gender), r (Race), a (Age), e (Education). i.e. if you want to retrieve unemployment data by gender, race and education, you would set this parameter to "gre".

Value
tbl.df with data filtered by the selected criteria.

References
Economic Policy Institute Data Library

Examples
get_underemployment()

get_underemployment("r")

get_underemployment("grae")

get_unemployment  Retreive the share of the labor force without a job

Description
Retreive the share of the labor force without a job

Usage
get_unemployment(by = NULL)
get_unemployment_by_state

Arguments

by  NULL or character string with any combination of g (Gender), r (Race), a (Age), e (Education). i.e. if you want to retrieve unemployment data by gender, race and education, you would set this parameter to "gre".

Value

tbl_df with data filtered by the selected criteria.

Note

See get_unemployment_by_state() for information on retrieving unemployment by state+race.

References

Economic Policy Institute Data Library

Examples

got_unemployment()

got_unemployment("r")

got_unemployment("grae")

got_unemployment_by_state

Retreive the share of the labor force without a job (by state)

Description

Retreive the share of the labor force without a job (by state)

Usage

got_unemployment_by_state(by = NULL)

Arguments

by  NULL or r for a partition by race.

Value

tbl_df with data filtered by the selected criteria.

Note

See got_unemployment() for other unemployment extracts.
**get_union_coverage**

**References**

Economic Policy Institute Data Library

**Examples**

get_unemployment_by_state()

get_unemployment_by_state("r")

---

**get_union_coverage  Retreive Union Coverage**

**Description**

The union coverage rate shows the percentage of the workforce covered by a collective bargaining agreement.

**Usage**

get_union_coverage()

**Value**

| tbl.df |
| data frame |

**Note**

Data source: CPS ORG | Hirsch and Macpherson (2003)

**References**

Economic Policy Institute Data Library

**Examples**

if (interactive()) get_union_coverage()
get_wages_by_education

Retreive the average hourly wages of workers disaggregated by the highest level of education attained

Description

Wages by education are the average hourly wages of workers disaggregated by the highest level of education attained. Employment shares provide the distribution of educational attainment for workers of each gender, racial, and ethnic group as a share of total employed for each group.

Usage

get_wages_by_education(by = NULL)

Arguments

by

NULL or character string with any combination of g (Gender) or r (Race), i.e. if you want to retrieve unemployment data by gender and race, you would set this parameter to "gr".

Value

tbl1_df with data filtered by the selected criteria.

References

Economic Policy Institute Data Library

Examples

get_wages_by_education()

get_wages_by_education("r")

get_wages_by_education("gr")

get_wages_by_percentile

Retreive wages at ten distinct points in the wage distribution

Description

Wage percentiles are wages at ten distinct points in the wage distribution: deciles and the 95th percentile. The 95–50 and 50–10 wage ratios show how much greater wages are at the top than the middle, and at the middle than the bottom, respectively.
get_wage_decomposition

Usage

get_wages_by_percentile(by = NULL)

Arguments

by NULL or character string with any combination of g (Gender) or r (Race), i.e. if you want to retrieve unemployment data by gender and race, you would set this parameter to "gr".

Value

tbl_df with data filtered by the selected criteria.

data frame

References

Economic Policy Institute Data Library

Examples

get_wages_by_percentile()
get_wages_by_percentile("r")
get_wages_by_percentile("gr")

get_wage_decomposition

Retreive Wage Decomposition

Description

Wage inequality data shows the overall wage inequality and the within-group and between-group wage inequality over time. These measures allow an examination of how much of the change in overall wage inequality in particular periods was due to changes in within-group and between-group wage inequality.

Usage

get_wage_decomposition(by = NULL)

Arguments

by NULL or character string of g (Gender)

Details

Population sample: Wage and salary workers age 18–64
Value

* tbl_df with data filtered by the selected criteria.
  data frame

Note

Data source: CPS ORG

References

Economic Policy Institute Data Library

Examples

```r
get_wages_by_percentile()
get_wages_by_percentile("g")
```

---

**not_dos**

*Not DoS’ing EPI/Cloudflare*

Description

The EPI site/API is protected by Cloudflare. CF thinks CRAN is DoS’ing it when it runs examples and tests. This function is being used to prevent tests and examples from failing on CRAN.

Usage

```r
not_dos()
```

Value

* logical
