

Package ‘ggfun’

September 17, 2021

Title Miscellaneous Functions for 'ggplot2'

Version 0.0.4

Description Useful functions to edit 'ggplot' object (e.g., setting fonts for theme and layers, adding rounded rectangle as background for each of the legends).

Imports ggplot2, grid, rlang, utils

Suggests ggplotify, knitr, rmarkdown, prettydoc

VignetteBuilder knitr

ByteCompile true

License Artistic-2.0

Encoding UTF-8

RoxygenNote 7.1.1

element_roundrect *round rectangle borders and backgrounds*

Description

round rectangle borders and backgrounds

Usage

```
element_roundrect(
  fill = NULL,
  colour = NULL,
  size = NULL,
  linetype = NULL,
  color = NULL,
  r = grid::unit(0.1, "snpc"),
  inherit.blank = FALSE
)
```

Arguments

fill	Fill colour.
colour	Line/border colour. Color is an alias for colour.
size	Line/border size in mm; text size in pts.
linetype	Line type. An integer (0:8), a name (blank, solid, dashed, dotted, dottedash, longdash, twodash), or a string with an even number (up to eight) of hexadecimal digits which give the lengths in consecutive positions in the string.
color	Line/border colour. Color is an alias for colour.
r	the radius of the rounded corners, a unit object, default is unit(0.1, 'snpc').
inherit.blank	Should this element inherit the existence of an element_blank among its parents? If TRUE the existence of a blank element among its parents will cause this element to be blank as well. If FALSE any blank parent element will be ignored when calculating final element state.

Examples

```
library(ggplot2)
p <- ggplot(mpg, aes(displ, cty)) + geom_point()
p <- p + facet_grid(cols = vars(cyl))
p <- p + theme(strip.background=element_roundrect(fill="grey40", color=NA, r=0.15))
p
p2 <- ggplot(mtcars, aes(mpg, disp, color=factor(cyl), size=cyl)) +
  geom_point()
p2 + theme(legend.background=element_roundrect(color="#808080", linetype=2))
```

facet_set	<i>facet_set</i>
-----------	------------------

Description

add a facet label to a ggplot or change facet label of a ggplot

Usage

```
facet_set(label, side = "t", angle = NULL)
```

Arguments

label	a character or a named vector to label the plot
side	to label the plot at which side, either 't' (top) or 'r' (right)
angle	angle of the facet label. Default is 0 for side='t' and -90 for side='r'.

Value

a ggplot with facet label

get_aes_var	<i>get_aes_var</i>
-------------	--------------------

Description

extract aes mapping, compatible with ggplot2 < 2.3.0 & > 2.3.0

Usage

```
get_aes_var(mapping, var)
```

Arguments

mapping	aes mapping
var	variable

Value

mapped var

Author(s)

guangchuang yu

ggbreak2ggplot *ggbreak2ggplot*

Description

convert a ggbreak object to a ggplot object

Usage

```
ggbreak2ggplot(plot)
```

Arguments

plot a ggbreak object

Value

a ggplot object

Author(s)

Guangchuang Yu

gglegend *gglegend*

Description

add manual setting legend

Usage

```
gglegend(mapping, data, geom, p = NULL)
```

Arguments

mapping aes mapping for the 'geom'. The first mapping should be the one for the legend, while others maybe needed for the 'geom' (e.g., label for geom_text).

data input data frame. If users want to mapping 'VALUE' to 'colour', the input data should contains 'VALUE' and 'colour' (actual value, e.g., 'red' and 'blue') variable.

geom a geom to plot the data for generating the legend and the geom will be plotted invisible.

p a ggplot object. If NULL, the 'last_plot()' will be used.

Details

add additional legend to a ggplot

Value

a ggplot object

Author(s)

Guangchuang Yu

Examples

```
library(ggplot2)
p <- ggplot(mtcars, aes(mpg, disp)) + geom_point()
data <- data.frame(colour = c("red", "blue"), VALUE = c("A", "B"))
gglegend(aes(colour = VALUE, label=VALUE), data, geom_text, p)
```

is.ggbreak

is.ggbreak

Description

check whether a plot is a ggbreak object (including 'ggbreak', 'ggwrap' and 'ggcut' that defined in the 'ggbreak' package)

Usage

```
is.ggbreak(plot)
```

Arguments

plot a plot object

Value

logical value

Author(s)

Guangchuang Yu

*is.ggtree**is.ggtree*

Description

test whether input object is produced by ggtree function

Usage

```
is.ggtree(x)
```

Arguments

x object

Value

TRUE or FALSE

Author(s)

Guangchuang Yu

*keybox**keybox*

Description

draw border for each of the ggplot legends

Usage

```
keybox(p, grob = "roundrect", gp = NULL)
```

Arguments

p a ggplot object
grob one of 'rect' or 'roundrect'
gp graphic parameter

Value

grob object

Author(s)

Guangchuang Yu

Examples

```
library(ggplot2)
p <- ggplot(mtcars, aes(mpg, disp, color=factor(cyl), size=cyl)) + geom_point()
keybox(p, 'roundrect', gp = gpar(col = '#808080', lty = "dashed"))
```

*set_font**set_font*

Description

setting font for ggplot (axis text, label, title, etc.)

Usage

```
set_font(p, family = "sans", fontface = NULL, size = NULL, color = NULL)
```

Arguments

p	ggplot object
family	font family
fontface	font face
size	font size
color	font color

Value

TableGrob object

Author(s)

Guangchuang Yu

Examples

```
library(grid)
library(ggplot2)
d <- data.frame(x=rnorm(10), y=rnorm(10), lab=LETTERS[1:10])
p <- ggplot(d, aes(x, y)) + geom_text(aes(label=lab), size=5)
set_font(p, family="Times", fontface="italic", color='firebrick')
```
