Package ‘gglm’

March 21, 2023

Type Package
Title Grammar of Graphics for Linear Model Diagnostic Plots
Version 1.0.2
Description Allows for easy creation of diagnostic plots for a variety of model objects using the Grammar of Graphics.
Provides functionality for both individual diagnostic plots and an array of four standard diagnostic plots.
License CC0
Encoding UTF-8
Depends ggplot2
Imports broom, broom.mixed, dplyr, metafor, nlme, patchwork, purrr, tibble, tidyr, utils, rlang, vctrs
Suggests lme4
URL https://github.com/graysonwhite/gglm
BugReports https://github.com/graysonwhite/gglm/issues
RoxygenNote 7.2.3
NeedsCompilation no
Author Grayson White [aut, cre] (<https://orcid.org/0000-0003-4993-2792>)

stat_cooks_leverage ........................... 3
stat_cooks_obs ................................. 4
stat_fitted_resid ............................... 4
stat_normal_qq ................................ 5
Description

Provides four standard visual model diagnostic plots with `ggplot2`.

Usage

\[
gglm(data, theme = ggplot2::theme_gray(), \ldots)
\]

Arguments

- `data`: A model object of type `lm` or `glm`.
- `theme`: The theme of the `ggplot` to be produced.
- `\ldots`: Currently ignored. For extendability.

Value

A a `ggplot2` object for visual diagnostic of model validity.

Examples

```r
data(mtcars)
m1 <- lm(mpg ~ cyl + disp + hp, data = mtcars)
gglm(m1)
```

Description

Returns the possible model classes that `gglm` works with.

Usage

```r
list_model_classes(\ldots)
```

Arguments

- `\ldots`: Currently ignored. For extendability.
Value

A character vector containing the possible model classes that 'gglm' works with.

Note

Note that these are not always the exact name of the class that can be used. This is due to how some methods are written in the packages 'gglm' imports. For example, the model class "merMod" refers to a variety of model outputs from 'lme4', even when the outputted class is not called 'merMod'.

Examples

```r
list_model_classes()
```

---

stat_cooks_leverage  
stat_cooks_leverage

Description

Cook’s Distance vs. Leverage

Usage

```r
stat_cooks_leverage(
  alpha = 0.5,
  method = "loess",
  color = "steelblue",
  se = FALSE,
  ...)
```

Arguments

- `alpha`: Adjust transparency of points.
- `method`: Method for fitting the line to the points.
- `color`: Color of the line.
- `se`: Keep standard error bands around line?
- `...`: Currently ignored. For extendability.

Value

A `ggplot2` layer for plotting Cook’s Distance vs. Leverage.

Examples

```r
data(mtcars)
model <- lm(mpg ~ cyl + disp + hp, data = mtcars)
ggplot2::ggplot(data = model) + stat_cooks_leverage()
```
Description
‘ggplot2’ layer for plotting cook’s distance by observation number.

Usage
stat_cooks_obs(...)

Arguments
...
Currently ignored. For extendability.

Value
A ‘ggplot2’ layer for plotting cook’s distance by observation number.

Examples
data(mtcars)
model <- lm(mpg ~ cyl + disp + hp, data = mtcars)
ggplot2::ggplot(data = model) + stat_cooks_obs()

Description
‘ggplot2’ layer for plotting a fitted vs. residual scatter plot.

Usage
stat_fitted_resid(alpha = 0.5, ...)

Arguments
alpha
Adjust transparency of points.
...
Currently ignored. For extendability.

Value
A ‘ggplot2’ layer for plotting a fitted vs. residual scatter plot.
**stat_normal_qq**

### Examples

```r
data(mtcars)
model <- lm(mpg ~ cyl + disp + hp, data = mtcars)
ggplot2::ggplot(data = model) + stat_fitted_resid()
```

### Description

Normal QQ plot.

### Usage

```r
stat_normal_qq(alpha = 0.5, ...)
```

### Arguments

- `alpha` Adjust transparency of points.
- `...` Currently ignored. For extendability.

### Value

A `ggplot2` layer for plotting a Normal Q-Q plot.

### Examples

```r
data(mtcars)
model <- lm(mpg ~ cyl + disp + hp, data = mtcars)
ggplot2::ggplot(data = model) + stat_normal_qq()
```

---

**stat_resid_hist**

### Description

Visualize the distribution of the residuals of a model.

### Usage

```r
stat_resid_hist(bins = 30, ...)
```

### Arguments

- `bins` Adjust the number of bins.
- `...` Currently ignored. For extendability.
Value

A `ggplot2` layer for plotting a histogram of residuals.

Examples

data(mtcars)
model <- lm(mpg ~ cyl + disp + hp, data = mtcars)
ggplot2::ggplot(data = model) + stat_resid_hist()

stat_resid_leverage

Description

Residual vs. leverage plot.

Usage

```r
stat_resid_leverage(
  alpha = 0.5,
  method = "loess",
  se = FALSE,
  color = "steelblue",
  ...  
)
```

Arguments

- **alpha**: Adjust transparency of points.
- **method**: Method for fitting the line to the points.
- **se**: Keep standard error bands around line?
- **color**: Color of the line.
- **...**: Currently ignored. For extendability.

Value

A `ggplot2` layer for plotting a fitted vs. residual scatter plot.

Examples

data(mtcars)
model <- lm(mpg ~ cyl + disp + hp, data = mtcars)
ggplot2::ggplot(data = model) + stat_resid_leverage()
**Description**

Scale location diagnostic plot.

**Usage**

```r
stat_scale_location(
  alpha = 0.5,
  na.rm = TRUE,
  se = FALSE,
  method = "loess",
  color = "steelblue",
  ...  
)
```

**Arguments**

- `alpha` Adjust the transparency of points.
- `na.rm` Remove points with value NA?
- `se` Keep standard error bands around line?
- `method` Method for fitting the line to the points.
- `color` Color of the line.
- `...` Currently ignored. For extendability.

**Value**

A `ggplot2` layer for plotting the scale location diagnostic plot.

**Examples**

```r
data(mtcars)
model <- lm(mpg ~ cyl + disp + hp, data = mtcars)
ggplot2::ggplot(data = model) + stat_scale_location()
```
