## Package ‘gtrendsR’

August 29, 2019

**Type** Package  
**Title** Perform and Display Google Trends Queries  
**Version** 1.4.4  
**Description** An interface for retrieving and displaying the information returned online by Google Trends is provided. Trends (number of hits) over the time as well as geographic representation of the results can be displayed.  
**License** GPL (>= 2)  
**BugReports** [https://github.com/PMassicotte/gtrendsR/issues](https://github.com/PMassicotte/gtrendsR/issues)  
**URL** [https://github.com/PMassicotte/gtrendsR](https://github.com/PMassicotte/gtrendsR)  
**Depends** R (>= 3.2.0)  
**LazyData** yes  
**Imports** ggplot2, jsonlite, anytime, curl  
**RoxygenNote** 6.1.1  
**Suggests** knitr, rmarkdown  
**Encoding** UTF-8  
**NeedsCompilation** no  
**Author** Philippe Massicotte [aut, cre], Dirk Eddelbuettel [aut]  
**Maintainer** Philippe Massicotte <pmassicotte@hotmail.com>  
**Repository** CRAN  
**Date/Publication** 2019-08-29 17:50:02 UTC

### R topics documented:

</tbody>
</table>

**Index** 7
categories

Google Trends categories.

Description

- name Names of the categories
- id IDs of the categories

Usage

data("categories")

Format

A data frame with 1426 rows and 2 variables

countries

Word countries ISO code.

Description

- country_code Two-digits country codes
- description Description of the location
- sub_code ISO3166-2 country codes

Usage

data("countries")

Format

A data frame with 122845 rows and 3 variables

References

http://www.unece.org/cefact/codesfortrade/codes_index.html
gtrends

Description

The gtrends default method performs a Google Trends query for the ‘query’ argument and session ‘session’. Optional arguments for geolocation and category can also be supplied.

Usage

gtrends(keyword = NA, geo = "", time = "today+5-y",
gprop = c("web", "news", "images", "froogle", "youtube"),
category = 0, hl = "en-US", low_search_volume = FALSE,
cookie_url = "http://trends.google.com/Cookies/NID", tz = 0,
onlyInterest = FALSE)

Arguments

- **keyword**: A character vector with the actual Google Trends query keywords. Multiple keywords are possible using `gtrends(c("NHL", "NBA", "MLB", "MLS"))`.
- **geo**: A character vector denoting geographic regions for the query, default to "all" for global queries. Multiple regions are possible using `gtrends("NHL", c("CA", "US"))`.
- **time**: A string specifying the time span of the query. Possible values are:
  - "now 1-H"  Last hour
  - "now 4-H"  Last four hours
  - "now 1-d"  Last day
  - "now 7-d"  Last seven days
  - "today 1-m"  Past 30 days
  - "today 3-m"  Past 90 days
  - "today 12-m"  Past 12 months
  - "today+5-y"  Last five years (default)
  - "all"  Since the beginning of Google Trends (2004)
  - "Y-m-d Y-m-d"  Time span between two dates (ex.: "2010-01-01 2010-04-03")
- **gprop**: A character string defining the Google product for which the trend query is performed. Valid options are:
  - "web" (default)
  - "news"
  - "images"
  - "froogle"
  - "youtube"
- **category**: A character denoting the category, defaults to "0".
- **hl**: A string specifying the ISO language code (ex.: “en-US” or “fr”). Default is “en-US”. Note that this is only influencing the data returned by related topics.
low_search_volume

Logical. Should include low search volume regions?

cookie_url

A string specifying the URL from which to obtain cookies. Default should work in general; should only be changed by advanced users.

tz

A number specifying the minutes the returned dates should be offset to UTC. Note the parameter 'time' above is specified in UTC. E.g. choosing "time=2018-01-01T01 2018-01-01T03" and "tz=-120" will yield data between 2018-01-01T03 and 2018-01-01T05, i.e. data specified to be in UTC+2.

onlyInterest

If you only want the interest over time set it to TRUE.

Value

An object of class ‘gtrends’ (basically a list of data frames).

Categories

The package includes a complete list of categories that can be used to narrow requests. These can be accessed using data("categories").

Related topics

Note that *related topics* are not retrieved when more than one keyword is provided due to Google restriction.

Examples

## Not run:

head(gtrends("NHL")$interest_over_time)
head(gtrends("NHL")$related_topics)
head(gtrends("NHL")$related_queries)

head(gtrends(c("NHL", "NFL"))$interest_over_time)
head(gtrends(c("NHL", "NFL"), geo = c("CA", "US"))$interest_over_time)

## Interest by city
gtrends(keyword="obama",geo="US-AL-630")

## Sport category (20)
data(categories)
categories[grepl("Sport", categories$name),]
gtrends(c("NHL", "NFL"), geo = c("CA", "US"), category = 20)
gtrends(geo = c("CA"), category = 20)

## Playing with time format
gtrends(c("NHL", "NFL"), time = "now 1-H") # last hour
gtrends(c("NHL", "NFL"), time = "now 4-H") # last four hours
Plot Google Trends interest over time

Description

Plot Google Trends interest over time

Usage

## S3 method for class 'gtrends'
plot(x, ...)

Arguments

x
A `gtrends` object.

... Additional parameters passed on in method dispatch. Currently not used.

Value

A ggplot2 object is returned silently.
setHandleParameters

**Examples**

```r
## Not run:
res <- gtrends("nhl", geo = c("CA", "US"))
plot(res)

## End(Not run)
```

---

**setHandleParameters**

If `gtrends` should be used behind a proxy, especially with NTLM authentication mode, you need to set the proxy parameters and credentials using "setHandleParameters" function.

**Description**

If `gtrends` should be used behind a proxy, especially with NTLM authentication mode, you need to set the proxy parameters and credentials using "setHandleParameters" function.

**Usage**

```r
setHandleParameters(user = NULL, password = NULL, domain = NULL, 
                    proxyhost = NULL, proxyport = 8080, proxyauth = 15)
```

**Arguments**

- `user`: A string specifying your username.
- `password`: A string specifying your password.
- `domain`: A string specifying the authentication domain.
- `proxyhost`: A string specifying the Proxy host DNS or IP address.
- `proxyport`: A numeric specifying the Proxy Port: 8080 (default).
- `proxyauth`: A numeric specifying the Proxy Authentication Method: 0 for NONE 1 for BASIC 2 for DIGEST 4 for NEGOTIATE 8 for NTLM 15 for ANY (default).

**Examples**

```r
## Not run:
library(gtrendsR)
setHandleParameters(user="xxxx",password="******",domain="mydomain",proxyhost = "10.111.124.113")
res <- gtrends(c("nhl", "nba"), geo = c("CA", "US"))

## End(Not run)
```
