VignetteBuilder knitr
NeedsCompilation no
Author Remi Bacha [aut, cre]
Maintainer Remi Bacha <hello@remibacha.com>
Repository CRAN
Date/Publication 2019-01-07 16:40:33 UTC

R topics documented:

   majestic_all ........................................................................ 2
   majestic_domain .................................................................. 2
   majestic_url ..................................................................... 3

Index 4
majestic_all  

Description

This function provides both all backlink data of and URL and its roots domain, including its CitationFlow, TrustFlow, and Root domain.

Usage

majestic_all(url, api_key)

Arguments

url  
An URL you’d like to investigate.

api_key  
An identification key assigned to a user after subscribing to Majestic that is available via Profile page.

Value

majestic_all provides all backlink data of an UR

Examples

```r
## Not run:
url <- "https://dataseolabs.com/fr/
api_key <- "xxxxxxxxxxxxxxxxxxx"
majestic_all(url, api_key)

## End(Not run)
```

majestic_domain  

Description

This function first extract the root domain from an URL, then provides all backlink data of the domain, including its CitationFlow, TrustFlow, and Root domain.

Usage
