Package ‘mapSpain’

August 13, 2022

Type Package

Title Administrative Boundaries of Spain

Version 0.6.2

Description Administrative Boundaries of Spain at several levels ( Autonomous Communities, Provinces, Municipalities) based on the 'GISCO' Eurostat' database <https://ec.europa.eu/eurostat/web/gisco> and 'CartoBase SIANE' from 'Instituto Geografico Nacional' <https://www.ign.es/>. It also provides a 'leaflet' plugin and the ability of downloading and processing static tiles.

License GPL-3

addProviderEspTiles

Description

Include base tiles of Spanish public administrations on a leaflet map.

Usage

addProviderEspTiles(
  map,
  provider,
  layerId = NULL,
  group = NULL,
  options = providerEspTileOptions()
)

providerEspTileOptions(...)

Arguments

map A map widget created from leaflet::leaflet().
provider Name of the provider, see leaflet.providersESP.df for values available.
layerId the layer id
group The name of the group the newly created layers should belong to Human-friendly group names are permitted—they need not be short, identifier-style names. Any number of layers and even different types of layers (e.g. markers and polygons) can share the same group name. See leaflet::addTiles().
options a list of extra options for tile layers, popups, paths (circles, rectangles, polygons, ...), or other map elements
...

Details

providerEspTileOptions() is a wrapper of leaflet::providerTileOptions().

Value

A map object generated with leaflet::leaflet().

Source

esp_check_access

See Also

leaflet::leaflet(), leaflet::addTiles()
leaflet::providerTileOptions(), leaflet::tileOptions()

Other imagery utilities: esp_getTiles(), leaflet.providersESP.df

Examples

library(leaflet)
PuertadelSol <-
  leaflet() %>%
  setView(
    lat = 40.4166,
    lng = -3.7038400,
    zoom = 18
  ) %>%
  addProviderEspTiles(provider = "IGNBase.Gris") %>%
  addProviderEspTiles(provider = "RedTransporte.Carreteras")

PuertadelSol

---

esp_check_access | Check access to SIANE data

Description

Check if R has access to resources at https://github.com/rOpenSpain/mapSpain/tree/sianedata.

Usage

esp_check_access()

Value

a logical.

See Also

giscoR::gisco_check_access()

Examples

esp_check_access()
esp_clear_cache

Clear your mapSpain cache dir

Description

Use this function with caution. This function would clear your cached data and configuration, specifically:

- Deletes the mapSpain config directory (rappdirs::user_config_dir("mapSpain", "R").
- Deletes the cache_dir directory.
- Deletes the values on stored on Sys.getenv("MAPSPAIN_CACHE_DIR") and options(mapSpain_cache_dir).

Usage

esp_clear_cache(config = FALSE, cached_data = TRUE, verbose = FALSE)

Arguments

- config: if TRUE, will delete the configuration folder of mapSpain.
- cached_data: If this is set to TRUE, it will delete your cache_dir and all its content.
- verbose: Logical, displays information. Useful for debugging, default is FALSE.

Details

This is an overkill function that is intended to reset your status as if you would never have installed and/or used mapSpain.

Value

Invisible. This function is called for its side effects.

See Also

Other cache utilities: esp_set_cache_dir()

Examples

# Don't run this! It would modify your current state
## Not run:
esp_clear_cache(VERBOSE = TRUE)

## End(Not run)
Sys.getenv("MAPSPAIN_CACHE_DIR")
Description
A data frame used internally for translating codes and names of the different subdivisions of Spain. The data frame provides the hierarchy of the subdivisions including NUTS1 level, Autonomous Communities (equivalent to NUTS2), Provinces and NUTS3 level. See Note.

Format
A data frame with 59 rows codes as columns

- **nuts+.code**: NUTS code of each subdivision.
- **nuts+.code**: NUTS name of each subdivision.
- **codauto**: INE code of each autonomous community.
- **iso2+.code**: ISO2 code of each autonomous community and province.
- **ine+.name**: INE name of each autonomous community and province.
- **iso2+.name.(lang)**: ISO2 name of each autonomous community and province. Several languages available.
- **cldr+.name.(lang)**: CLDR name of each autonomous community and province. Several languages available.
- **ccaa.short.+**: Short (common) name of each autonomous community. Several languages available.
- **cpro**: INE code of each province.
- **prov.shortname.+**: Short (common) name of each province. Several languages available.

Note
Languages available are:

- "en": English
- "es": Spanish
- "ca": Catalan
- "ga": Galician
- "eu": Basque

Although NUTS2 matches the first subdivision level of Spain (CCAA - Autonomous Communities), it should be noted that NUTS3 does not match the second subdivision level of Spain (Provinces). NUTS3 provides a dedicated code for major islands whereas the Provinces doesn’t.

Ceuta and Melilla has an specific status (Autonomous Cities) but are considered as communities with a single province (as Madrid, Asturias or Murcia) on this dataset.
esp_dict_region_code

Source

- INE: Instituto Nacional de Estadística: https://www.ine.es/
- ISO: https://www.iso.org/home.html

See Also

Other datasets: esp_munic.sf, esp_nuts.sf, leaflet.providersESP.df, pobmun19
Other political: esp_get_can_box(), esp_get_capimun(), esp_get_ccaa(), esp_get_comarca(), esp_get_country(), esp_get_gridmap, esp_get_munic(), esp_get_nuts(), esp_get_prov(), esp_get_simpl_prov()
Other dictionary: esp_dict_region_code()

Examples

data("esp_codelist")

desc

Description

Converts long subdivision names into different coding schemes and languages.

Usage

esp_dict_region_code(sourcevar, origin = "text", destination = "text")

esp_dict_translate(sourcevar, lang = "en", all = FALSE)

Arguments

- sourcevar: Vector which contains the subdivision names to be converted.
- origin, destination: One of "text", "nuts", "iso2", "codauto" and "cpro".
- lang: Language of translation. Available languages are:
  - "es": Spanish
  - "en": English
  - "ca": Catalan
  - "ga": Galician
  - "eu": Basque
- all: Logical. Should the function return all names or not? On FALSE it returns a character vector. See Value.
esp_dict_region_code

Details
If no match is found for any value, the function displays a warning and returns NA for those values.
Note that mixing names of different administrative levels (e.g. "Catalonia" and "Barcelona") may return empty values, depending on the destination values.

Value
esp_dict_region_code() returns a vector of characters.
esp_dict_translate() returns a character vector or a named list with each of the possible names of each sourcevar on the required language lang.

See Also
Other dictionary: esp_codelist
Other dictionary: esp_codelist

Examples
vals <- c("Errioxa", "Coruna", "Gerona", "Madrid")

esp_dict_region_code(vals)
esp_dict_region_code(vals, destination = "nuts")
esp_dict_region_code(vals, destination = "cpro")
esp_dict_region_code(vals, destination = "iso2")

# From ISO2 to another codes
iso2vals <- c("ES-M", "ES-S", "ES-SG")
esp_dict_region_code(iso2vals, origin = "iso2")
esp_dict_region_code(iso2vals, origin = "iso2", destination = "nuts")
esp_dict_region_code(iso2vals, origin = "iso2", destination = "cpro")

# Mixing levels
valsmix <- c("Centro", "Andalucia", "Seville", "Menorca")
esp_dict_region_code(valsmix, destination = "nuts")
## Not run:
# Warning
esp_dict_region_code(valsmix, destination = "codauto")
esp_dict_region_code(valsmix, destination = "iso2")
## End(Not run)
vals <- c(
    "La Rioja", "Sevilla", "Madrid",
    "Jaen", "Orense", "Baleares"
)

esp_dict_translate(vals)
esp_dict_translate(vals, lang = "es")
esp_dict_translate(vals, lang = "ca")
esp_dict_translate(vals, lang = "eu")
esp_dict_translate(vals, lang = "ga")
esp_dict_translate(vals, lang = "ga", all = TRUE)

---

**Description**

Get static map tiles based on a spatial object. Maps can be fetched from various open map servers. This function is a implementation of the javascript plugin [leaflet-providersESP v1.3.0](https://github.com/lemonick/leaflet-providersESP).

**Usage**

```r
esp_getTiles(
  x,
  type = "IDErioja",
  zoom = NULL,
  zoommin = 0,
  crop = TRUE,
  res = 512,
  bbox_expand = 0.05,
  transparent = TRUE,
  mask = FALSE,
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE,
  options = NULL
)
```

**Arguments**

- `x` An sf or sfc object.
- `type` Name of the provider. See [leaflet.providersESP.df](https://github.com/lemonick/leaflet-providersESP).
- `zoom` Zoom level. If NULL, it is determined automatically. If set, it overrides zoommin. Only valid for WMTS tiles. On a single point it applies a buffer to the point and on zoom = NULL the function set a zoom level of 18. See **Details**.
**esp_getTiles**

- **zoommin**: Delta on default zoom. The default value is designed to download fewer tiles than you probably want. Use 1 or 2 to increase the resolution.
- **crop**: TRUE if results should be cropped to the specified x extent, FALSE otherwise. If x is an sf object with one POINT, crop is set to FALSE.
- **res**: Resolution (in pixels) of the final tile. Only valid for WMS.
- **bbox_expand**: A numeric value that indicates the expansion percentage of the bounding box of x.
- **transparent**: Logical. Provides transparent background, if supported. Depends on the selected provider on type.
- **mask**: TRUE if the result should be masked to x.
- **update_cache**: A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.
- **cache_dir**: A path to a cache directory. See About caching.
- **verbose**: Logical, displays information. Useful for debugging, default is FALSE.
- **options**: A named list containing additional options to pass to the query.

**Details**

Zoom levels are described on the OpenStreetMap wiki:

<table>
<thead>
<tr>
<th>zoom</th>
<th>area to represent</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>whole world</td>
</tr>
<tr>
<td>3</td>
<td>large country</td>
</tr>
<tr>
<td>5</td>
<td>state</td>
</tr>
<tr>
<td>8</td>
<td>county</td>
</tr>
<tr>
<td>10</td>
<td>metropolitan area</td>
</tr>
<tr>
<td>11</td>
<td>city</td>
</tr>
<tr>
<td>13</td>
<td>village or suburb</td>
</tr>
<tr>
<td>16</td>
<td>streets</td>
</tr>
<tr>
<td>18</td>
<td>some buildings, trees</td>
</tr>
</tbody>
</table>

For a complete list of providers see leaflet.providersESP.df.

Most WMS/WMTS providers provide tiles on "EPSG:3857". In case that the tile looks deformed, try projecting first x:

```
x <- sf::st_transform(x, 3857)
```

**Value**

A SpatRaster is returned, with 3 (RGB) or 4 (RGBA) layers, depending on the provider. See terra::rast().

**About caching**

You can set your cache_dir with esp_set_cache_dir().
Sometimes cached files may be corrupt. On that case, try re-downloading the data setting `update_cache = TRUE`.

If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your `cache_dir`. Use the option `verbose = TRUE` for debugging the API query.

**Source**

https://dieghernan.github.io/leaflet-providersESP/ leaflet plugin, **v1.3.0**.

**See Also**

`terra::rast()`.

Other imagery utilities: `addProviderEspTiles()`, `leaflet.providersESP.df`

**Examples**

```r
## Not run:
# This script downloads tiles to your local machine
# Run only if you are online
Murcia <- esp_get_ccaa_siane("Murcia", epsg = 3857)
Tile <- esp_getTiles(Murcia)

library(ggplot2)
library(tidyterra)

ggplot(Murcia) +
  geom_spatraster_rgb(data = Tile) +
  geom_sf(fill = NA)
## End(Not run)
```

---

**esp_get_can_box**

Get sf lines and polygons for insetting the Canary Islands

**Description**

When plotting Spain, it is usual to represent the Canary Islands as an inset (see `moveCAN` on `esp_get_nuts()`). These functions provide complementary lines and polygons to be used when the Canary Islands are displayed as an inset.

- `esp_get_can_box()` is used to draw lines around the displaced Canary Islands.
- `esp_get_can_provinces()` is used to draw a separator line between the two provinces of the Canary Islands.
Usage

```r
esp_get_can_box(style = "right", moveCAN = TRUE, epsg = "4258")
esp_get_can_provinces(moveCAN = TRUE, epsg = "4258")
```

Arguments

- **style**: Style of line around Canary Islands. Four options available: "left", "right", "box" or "poly".
- **moveCAN**: A logical TRUE/FALSE or a vector of coordinates c(lat, lon). It places the Canary Islands close to Spain's mainland. Initial position can be adjusted using the vector of coordinates. See **Displacing the Canary Islands**.
- **epsg**: projection of the map: 4-digit EPSG code. One of:
  - "4258": ETRS89
  - "4326": WGS84
  - "3035": ETRS89 / ETRS-LAEA
  - "3857": Pseudo-Mercator

Value

A sf polygon or line depending of style parameter.

`esp_get_can_provinces` returns a LINESTRING object.

Displacing the Canary Islands

While `moveCAN` is useful for visualization, it would alter the actual geographic position of the Canary Islands. When using the output for spatial analysis or using tiles (e.g. with `esp_getTiles()` or `addProviderEspTiles()`) this option should be set to FALSE in order to get the actual coordinates, instead of the modified ones.

Source

`esp_get_can_provinces` extracted from CartoBase ANE, se89_mult_admin_provcan_1.shp file.

See Also

Other political: `esp_codelist`, `esp_get_capimun()`, `esp_get_ccaa()`, `esp_get_comarca()`, `esp_get_country()`, `esp_get_gridmap`, `esp_get_munic()`, `esp_get_nuts()`, `esp_get_prov()`, `esp_get_simpl_prov()`

Examples

```r
Provs <- esp_get_prov()
Box <- esp_get_can_box()
Line <- esp_get_can_provinces()

# Plot
library(ggplot2)
```
ggplot(Provs) +
  geom_sf() +
  geom_sf(data = Box) +
  geom_sf(data = Line) +
  theme_linedraw()

# Displacing Canary

# By same factor

displace <- c(15, 0)

Provs_D <- esp_get_prov(moveCAN = displace)

Box_D <- esp_get_can_box(style = "left", moveCAN = displace)

Line_D <- esp_get_can_provinces(moveCAN = displace)

ggplot(Provs_D) +
  geom_sf() +
  geom_sf(data = Box_D) +
  geom_sf(data = Line_D) +
  theme_linedraw()

# Example with poly option

# Get countries with giscoR

library(giscoR)

# Low resolution map
res <- "20"

Countries <-
gisco_get_countries(  
  res = res,  
  epsg = "4326",  
  country = c("France", "Portugal", "Andorra", "Morocco", "Argelia")
)

CANbox <-
  esp_get_can_box(  
    style = "poly",  
    epsg = "4326",  
    moveCAN = c(12.5, 0)
  )

CCAA <- esp_get_ccaa(  
  res = res,  
  epsg = "4326",  
  moveCAN = c(12.5, 0) # Same displacement factor
)
### Description

Get a `sf` point with the location of the political powers for each municipality (possibly the center of the municipality).

Note that this differs of the centroid of the boundaries of the municipality, returned by `esp_get_munic()`.

### Usage

```r
esp_get_capimun(
  year = Sys.Date(),
  epsg = "4258",
  cache = TRUE,
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE,
  region = NULL,
  munic = NULL,
  moveCAN = TRUE,
  rawcols = FALSE
)
```

### Arguments

- **year**: Release year. See **Details** for years available.
- **epsg**: projection of the map: 4-digit **EPSG code**. One of:
  - "4258": ETRS89
  - "4326": WGS84
• "3035": ETRS89 / ETRS-LAEA
• "3857": Pseudo-Mercator

cache A logical whether to do caching. Default is TRUE. See About caching.
update_cache A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.
cache_dir A path to a cache directory. See About caching.
verbose Logical, displays information. Useful for debugging, default is FALSE.
region A vector of names and/or codes for provinces or NULL to get all the municipalities. See Details.
munic A name or regex expression with the names of the required municipalities. NULL would not produce any filtering.
moveCAN A logical TRUE/FALSE or a vector of coordinates c(lat, lon). It places the Canary Islands close to Spain’s mainland. Initial position can be adjusted using the vector of coordinates. See Displacing the Canary Islands.
rawcols Logical. Setting this to TRUE would add the raw columns of the dataset provided by IGN.

Details

year could be passed as a single year ("YYYY" format, as end of year) or as a specific date ("YYYY-MM-DD" format). Historical information starts as of 2005.

When using region you can use and mix names and NUTS codes (levels 1, 2 or 3), ISO codes (corresponding to level 2 or 3) or "cpro". See esp_codelist

When calling a superior level (Province, Autonomous Community or NUTS1), all the municipalities of that level would be added.

Value

A sf point object.

About caching

You can set your cache_dir with esp_set_cache_dir().

Sometimes cached files may be corrupt. On that case, try re-downloading the data setting update_cache = TRUE.

If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your cache_dir. Use the option verbose = TRUE for debugging the API query.

Displacing the Canary Islands

While moveCAN is useful for visualization, it would alter the actual geographic position of the Canary Islands. When using the output for spatial analysis or using tiles (e.g. with esp_getTiles() or addProviderEspTiles()) this option should be set to FALSE in order to get the actual coordinates, instead of the modified ones.
esp_get_capimun

Source
IGN data via a custom CDN (see https://github.com/rOpenSpain/mapSpain/tree/sianedata).

See Also
Other political: esp_codelist, esp_get_can_box(), esp_get_ccaa(), esp_get_comarca(), esp_get_country(), esp_get_gridmap, esp_get_munic(), esp_get_nuts(), esp_get_prov(), esp_get_simpl_prov()
Other municipalities: esp_get_munic(), esp_munic.sf

Examples

## Not run:
# This code compares centroids of municipalities against esp_get_capimun
# It also download tiles, make sure you are online

library(sf)

# Get shape
area <- esp_get_munic_siane(munic = "Valladolid", epsg = 3857)

# Area in km2
print(paste0(round(as.double(sf::st_area(area)) / 1000000, 2), " km2"))

# Extract centroid
centroid <- sf::st_centroid(area)
centroid$type <- "Centroid"

# Compare with capimun
capimun <- esp_get_capimun(munic = "Valladolid", epsg = 3857)
capimun$type <- "Capimun"

# Get a tile to check
tile <- esp_getTiles(area, zoommin = 2)

# Join both point geometries
points <- rbind(
    centroid[, "type"],
capimun[, "type"]
)

# Check on plot
library(ggplot2)
library(tidyterra)

ggplot(points) +
  geom_spatraster_rgb(data = tile) +
  geom_sf(data = area, fill = NA, color = "blue") +
  geom_sf(data = points, aes(fill = type), size = 5, shape = 21) +
  scale_fill_manual(values = c("green", "red")) +
  theme_void() +
Get Autonomous Communities of Spain as sf polygons and points

Description
Returns Autonomous Communities of Spain as polygons and points at a specified scale.

- `esp_get_ccaa()` uses GISCO (Eurostat) as source. Please use `giscoR::gisco_attributions()`.
- `esp_get_ccaa_siane()` uses CartoBase ANE as source, provided by Instituto Geografico Nacional (IGN), [http://www.ign.es/web/ign/portal](http://www.ign.es/web/ign/portal). Years available are 2005 up to today.

Usage

```r
esp_get_ccaa(ccaa = NULL, moveCAN = TRUE, ...)
esp_get_ccaa_siane(
  ccaa = NULL,
  year = Sys.Date(),
  epsg = "4258",
  cache = TRUE,
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE,
  resolution = "3",
  moveCAN = TRUE,
  rawcols = FALSE
)
```

Arguments

- `ccaa` A vector of names and/or codes for autonomous communities or NULL to get all the autonomous communities. See Details.
- `moveCAN` A logical TRUE/FALSE or a vector of coordinates c(lat, lon). It places the Canary Islands close to Spain’s mainland. Initial position can be adjusted using the vector of coordinates. See Displacing the Canary Islands.
- `...` Arguments passed on to `esp_get_nuts`
- `spatialtype` Type of geometry to be returned:
  - "LB": Labels - point object.
  - "RG": Regions - polygon object.
- `year` Release year. See `esp_get_nuts()` for `esp_get_ccaa()` and Details for `esp_get_ccaa_siane()`
**esp_get_ccaa**

- **epsg**
  - 4-digit **EPSG code**. One of:
    - "4258": ETRS89
    - "4326": WGS84
    - "3035": ETRS89 / ETRS-LAEA
    - "3857": Pseudo-Mercator

- **cache**
  - A logical whether to do caching. Default is **TRUE**. See **About caching**.

- **update_cache**
  - A logical whether to update cache. Default is **FALSE**. When set to **TRUE** it would force a fresh download of the source file.

- **cache_dir**
  - A path to a cache directory. See **About caching**.

- **verbose**
  - Logical, displays information. Useful for debugging, default is **FALSE**.

- **resolution**
  - Resolution of the polygon. Values available are "3", "6.5" or "10".

- **rawcols**
  - Logical. Setting this to **TRUE** would add the raw columns of the dataset provided by IGN.

**Details**

When using ccaa you can use and mix names and NUTS codes (levels 1 or 2), ISO codes (corresponding to level 2) or "codauto" (see esp_codelist). Ceuta and Melilla are considered as Autonomous Communities on this function.

When calling a NUTS1 level, all the Autonomous Communities of that level would be added.

On **esp_get_ccaa_siane()**, year could be passed as a single year ("YYYY" format, as end of year) or as a specific date ("YYYY-MM-DD" format). Historical information starts as of 2005.

**Value**

- A sf object specified by `spatialtype`.

**About caching**

You can set your `cache_dir` with **esp_set_cache_dir()**.

Sometimes cached files may be corrupt. On that case, try re-downloading the data setting `update_cache = TRUE`.

If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your `cache_dir`. Use the option `verbose = TRUE` for debugging the API query.

**Displacing the Canary Islands**

While moveCAN is useful for visualization, it would alter the actual geographic position of the Canary Islands. When using the output for spatial analysis or using tiles (e.g. with **esp_getTiles()** or **addProviderEspTiles()**) this option should be set to **FALSE** in order to get the actual coordinates, instead of the modified ones.

**Source**

IGN data via a custom CDN (see [https://github.com/rOpenSpain/mapSpain/tree/sianedata](https://github.com/rOpenSpain/mapSpain/tree/sianedata)).

    xlim = c(23, 74) * 10e4,
    ylim = c(14, 55) * 10e4
  ) +
  theme(panel.background = element_rect(fill = "#C7E7FB"))

esp_get_comarca

Get ‘comarcas’ of Spain as sf polygons

Description

Returns ‘comarcas’ of Spain as polygons, as provided by the INE (Instituto Nacional de Estadística).

Usage

esp_get_comarca(
  region = NULL,
  comarca = NULL,
  moveCAN = TRUE,
  epsg = "4258",
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE
)

Arguments

region A vector of names and/or codes for provinces or NULL to get all the comarcas. See Details.
comarca A name or regex expression with the names of the required comarcas. NULL would not produce any filtering.
moveCAN A logical TRUE/FALSE or a vector of coordinates c(lat, lon). It places the Canary Islands close to Spain’s mainland. Initial position can be adjusted using the vector of coordinates. See Displacing the Canary Islands.
epsg projection of the map: 4-digit EPSG code. One of:
  • "4258": ETRS89
  • "4326": WGS84
  • "3035": ETRS89 / ETRS-LAEA
  • "3857": Pseudo-Mercator
update_cache A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.
cache_dir A path to a cache directory. See About caching.
verbose Logical, displays information. Useful for debugging, default is FALSE.
Details

'Comarcas' (English equivalent: district, county, area or zone) does not always have a formal legal status. They correspond mainly to natural areas (valleys, river basins etc.) or even to historical regions or ancient kingdoms.

When using region you can use and mix names and NUTS codes (levels 1, 2 or 3), ISO codes (corresponding to level 2 or 3) or "cpro" (see esp_codelist).

When calling a superior level (Province, Autonomous Community or NUTS1), all the comarcas of that level would be added.

Legal Notice:
The use of the information contained on the INE website may be carried out by users or re-use agents, at their own risk, and they will be the sole liable parties in the case of having to answer to third parties due to damages arising from such use.

About caching

You can set your cache_dir with esp_set_cache_dir().

Sometimes cached files may be corrupt. On that case, try re-downloading the data setting update_cache = TRUE.

If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your cache_dir. Use the option verbose = TRUE for debugging the API query.

Displacing the Canary Islands

While moveCAN is useful for visualization, it would alter the actual geographic position of the Canary Islands. When using the output for spatial analysis or using tiles (e.g. with esp_getTiles() or addProviderEspTiles()) this option should be set to FALSE in order to get the actual coordinates, instead of the modified ones.

Source

INE: PC_Axis files.

---

esp_get_country

Get the borders of Spain as a sf polygon

Description

Returns the boundaries of Spain as a single sf polygon at a specified scale.

Usage

esp_get_country(moveCAN = TRUE, ...)

Arguments

moveCAN A logical TRUE/FALSE or a vector of coordinates c(lat, lon). It places the Canary Islands close to Spain’s mainland. Initial position can be adjusted using the vector of coordinates. See Displacing the Canary Islands.

... Arguments passed on to esp_get_nuts

epsg projection of the map: 4-digit EPSG code. One of:

- "4258": ETRS89
- "4326": WGS84
- "3035": ETRS89 / ETRS-LAEA
- "3857": Pseudo-Mercator
cache A logical whether to do caching. Default is TRUE. See About caching.
update_cache A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.
cache_dir A path to a cache directory. See About caching.
verbose Logical, displays information. Useful for debugging, default is FALSE.
resolution Resolution of the geospatial data. One of
  • "60": 1:60million
  • "20": 1:20million
  • "10": 1:10million
  • "03": 1:3million
  • "01": 1:1million

Value
A sf polygon object.

About caching
You can set your cache_dir with esp_set_cache_dir().
Sometimes cached files may be corrupt. On that case, try re-downloading the data setting update_cache = TRUE.
If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your cache_dir. Use the option verbose = TRUE for debugging the API query.

Displacing the Canary Islands
While moveCAN is useful for visualization, it would alter the actual geographic position of the Canary Islands. When using the output for spatial analysis or using tiles (e.g. with esp_getTiles() or addProviderEspTiles()) this option should be set to FALSE in order to get the actual coordinates, instead of the modified ones.

Examples

OriginalCan <- esp_get_country(moveCAN = FALSE)

# One row only
nrow(OriginalCan)
library(ggplot2)
```r
ggplot(OriginalCan) +
  geom_sf(fill = "grey70")

# Less resolution
MovedCan <- esp_get_country(moveCAN = TRUE, resolution = "20")
library(ggplot2)

ggplot(MovedCan) +
  geom_sf(fill = "grey70")
```

---

**esp_get_gridmap**  
*Get a sf hexbin or squared polygon of Spain*

**Description**

Loads a hexbin map (*sf* object) or a map of squares with the boundaries of the provinces or autonomous communities of Spain.

**Usage**

```r
esp_get_hex_prov(prov = NULL)
esp_get_hex_ccaa(ccaa = NULL)
esp_get_grid_prov(prov = NULL)
esp_get_grid_ccaa(ccaa = NULL)
```

**Arguments**

- **prov**  
  A vector of names and/or codes for provinces or NULL to get all the provinces. See Details.

- **ccaa**  
  A vector of names and/or codes for autonomous communities or NULL to get all the autonomous communities. See Details.

**Details**

Hexbin or grid map has an advantage over usual choropleth maps. In choropleths, a large polygon data looks more emphasized just because of its size, what introduces a bias. Here with hexbin, each region is represented equally dismissing the bias.

You can use and mix names, ISO codes, "codauto"/"cpro" codes (see esp_codelist) and NUTS codes of different levels.

When using a code corresponding of a higher level (e.g. `esp_get_prov("Andalucia")`) all the corresponding units of that level are provided (in this case, all the provinces of Andalucia).

Results are provided in **EPSG:4258**, use `sf::st_transform()` to change the projection.
esp_get_gridmap

Value

A sf POLYGON object.

See Also

  labs(title = "Hexbin: Provinces")

gridccaa <- esp_get_grid_ccaa()

ggplot(gridccaa) +
  geom_sf(data = esp) +
  geom_sf(aes(fill = codauto),
          alpha = 0.3,
          show.legend = FALSE
esp_get_grid_BDN

Get sf polygons of the national geographic grids provided by BDN

Description

Loads a sf polygon with the geographic grids of Spain as provided on the Banco de Datos de la Naturaleza (Nature Data Bank), by the Ministry of Environment (MITECO):

- esp_get_grid_BDN() extracts country-wide grids with resolutions 5x5 or 10x10 kms.
- esp_get_grid_BDN_ccaa() extracts grids by Autonomous Community with resolution 1x1 km.

Usage

esp_get_grid_BDN(
  resolution = 10,
  type = "main",
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE
)

esp_get_grid_BDN_ccaa(
  ccaa,
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE
)
esp_get_grid_BDN

Arguments

- **resolution**: Resolution of the grid in kms. Could be 5 or 10.
- **type**: The scope of the grid. It could be mainland Spain ("main") or the Canary Islands ("canary").
- **update_cache**: A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.
- **cache_dir**: A path to a cache directory. See About caching.
- **verbose**: Logical, displays information. Useful for debugging, default is FALSE.
- **ccaa**: A vector of names and/or codes for autonomous communities. See Details on esp_get_ccaa().

Value

A sf polygon

About caching

You can set your cache_dir with esp_set_cache_dir().

Sometimes cached files may be corrupt. On that case, try re-downloading the data setting update_cache = TRUE.

If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your cache_dir. Use the option verbose = TRUE for debugging the API query.

Source

Other grids: esp_get_grid_EEA(), esp_get_grid_ESDAC(), esp_get_grid_MTN()

Examples

```r
grid <- esp_get_grid_BDN(resolution = "10", type = "main")
library(ggplot2)

ggplot(grid) +
  geom_sf() +
  theme_light() +
```
esp_get_grid_EEA

Get sf polygons of the national geographic grids provided by EEA

Description

Loads a sf polygon with the geographic grids of Spain as provided by the European Environment Agency (EEA).

Usage

```r
esp_get_grid_EEA(
    resolution = 100,
    type = "main",
    update_cache = FALSE,
    cache_dir = NULL,
    verbose = FALSE
)
```

Arguments

- `resolution` Resolution of the grid in kms. Could be 1, 10 or 100.
- `type` The scope of the grid. It could be mainland Spain ("main") or the Canary Islands ("canary").
- `update_cache` A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.
- `cache_dir` A path to a cache directory. See About caching.
- `verbose` Logical, displays information. Useful for debugging, default is FALSE.

Value

A sf polygon

About caching

You can set your cache_dir with `esp_set_cache_dir()`.

Sometimes cached files may be corrupt. On that case, try re-downloading the data setting update_cache = TRUE.

If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your cache_dir. Use the option verbose = TRUE for debugging the API query.

esp <- esp_get_country(moveCAN = FALSE)
library(ggplot2)

ggplot(grid) +
  geom_sf() +
  geom_sf(data = grid_can) +
  geom_sf(data = esp, fill = NA) +
  theme_light() +
  labs(title = "EEA Grid for Spain")
```

### End(Not run)

---

**esp_get_grid_ESDAC**  
*Get sf polygons of the national geographic grids provided by ESDAC*

Description

Loads a sf polygon with the geographic grids of Spain as provided by the European Soil Data Centre (ESDAC).

Usage

```r
esp_get_grid_ESDAC(
  resolution = 10,
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE
)
```
esp_get_grid_ESDAC

Arguments

- **resolution** Resolution of the grid in kms. Could be 1 or 10.
- **update_cache** A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.
- **cache_dir** A path to a cache directory. See About caching.
- **verbose** Logical, displays information. Useful for debugging, default is FALSE.

Value

A sf polygon

About caching

You can set your cache_dir with esp_set_cache_dir().

Sometimes cached files may be corrupt. On that case, try re-downloading the data setting update_cache = TRUE.

If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your cache_dir. Use the option verbose = TRUE for debugging the API query.

Source

EEA reference grid.

Examples

```r
## Not run:
grid <- esp_get_grid_ESDAC()
esp <- esp_get_country(moveCAN = FALSE)
library(ggplot2)

ggplot(grid) +
  geom_sf() +
  geom_sf(data = esp, color = "grey50", fill = NA) +
```
**esp_get_grid_MTN**

```r
theme_light() +
labs(title = "ESDAC Grid for Spain")
```

```r
## End(Not run)
```

---

**Description**

Loads a `sf` polygon with the geographic grids of Spain.

**Usage**

```r
esp_get_grid_MTN(
  grid = "MTN25_ETRS89_Peninsula_Baleares_Canarias",
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE
)
```

**Arguments**

- `grid` Name of the grid to be loaded. See **Details**.
- `update_cache` A logical whether to update cache. Default is FALSE. When set to `TRUE` it would force a fresh download of the source file.
- `cache_dir` A path to a cache directory. See **About caching**.
- `verbose` Logical, displays information. Useful for debugging, default is FALSE.

**Details**

Metadata available on [https://github.com/rOpenSpain/mapSpain/tree/sianedata/MTN](https://github.com/rOpenSpain/mapSpain/tree/sianedata/MTN).

Possible values of `grid` are:

**grid_name**

- MTN25_ED50_Peninsula_Baleares
- MTN25_ETRS89_ceuta_melilla_alboran
- MTN25_ETRS89_Peninsula_Baleares_Canarias
- MTN25_RegCan95_Canarias
- MTN50_ED50_Peninsula_Baleares
- MTN50_ETRS89_Peninsula_Baleares_Canarias
- MTN50_RegCan95_Canarias

**MTN Grids:**
A description of the MTN (Mapa Topografico Nacional) grids available:

**MTN25_ED50_Peninsula_Baleares**

MTN25 grid corresponding to the Peninsula and Balearic Islands, in ED50 and geographical coordinates (longitude, latitude) This is the real MTN25 grid, that is, the one that divides the current printed series of the map, taking into account special sheets and irregularities.

**MTN50_ED50_Peninsula_Baleares**

MTN50 grid corresponding to the Peninsula and Balearic Islands, in ED50 and geographical coordinates (longitude, latitude) This is the real MTN50 grid, that is, the one that divides the current printed series of the map, taking into account special sheets and irregularities.

**MTN25_ETRS89_ceuta_melilla_alboran**

MTN25 grid corresponding to Ceuta, Melilla, Alboran and Spanish territories in North Africa, adjusted to the new official geodetic reference system ETRS89, in geographical coordinates (longitude, latitude).

**MTN25_ETRS89_Peninsula_Baleares_Canarias**

MTN25 real grid corresponding to the Peninsula, the Balearic Islands and the Canary Islands, adjusted to the new ETRS89 official reference geodetic system, in geographical coordinates (longitude, latitude).

**MTN50_ETRS89_Peninsula_Baleares_Canarias**

MTN50 real grid corresponding to the Peninsula, the Balearic Islands and the Canary Islands, adjusted to the new ETRS89 official reference geodetic system, in geographical coordinates (longitude, latitude).

**MTN25_RegCan95_Canarias**

MTN25 grid corresponding to the Canary Islands, in REGCAN95 (WGS84 compatible) and geographic coordinates (longitude, latitude). It is the real MTN25 grid, that is, the one that divides the current printed series of the map, taking into account the special distribution of the Canary Islands sheets.

**MTN50_RegCan95_Canarias**

MTN50 grid corresponding to the Canary Islands, in REGCAN95 (WGS84 compatible) and geographic coordinates (longitude, latitude). This is the real grid of the MTN50, that is, the one that divides the current printed series of the map, taking into account the special distribution of the Canary Islands sheets.

**Value**

A sf polygon

**About caching**

You can set your cache_dir with `esp_set_cache_dir()`.

Sometimes cached files may be corrupt. On that case, try re-downloading the data setting `update_cache = TRUE`.

If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your cache_dir. Use the option `verbose = TRUE` for debugging the API query.
esp_get_hydrobasin

Source
IGN data via a custom CDN (see https://github.com/rOpenSpain/mapSpain/tree/sianedata/MTN).

See Also
Other grids: esp_get_grid_BDN(), esp_get_grid_EEA(), esp_get_grid_ESDAC()

Examples

grid <- esp_get_grid_MTN(grid = "MTN50_ETRS89_Peninsula_Baleares_Canarias")
library(ggplot2)

ggplot(grid) +
  geom_sf() +
  theme_light() +
  labs(title = "MTN50 Grid for Spain")

Description
Loads a sf polygon object containing areas with the required hydrographic elements of Spain.

Usage

esp_get_hydrobasin(
  epsg = "4258",
  cache = TRUE,
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE,
  resolution = "3",
  domain = "land"
)

Arguments

epsg projection of the map: 4-digit EPSG code. One of:
  • "4258": ETRS89
  • "4326": WGS84
esp_get_hydrobasin

- "3835": ETRS89 / ETRS-LAEA
- "3857": Pseudo-Mercator

**cache**
A logical whether to do caching. Default is TRUE. See **About caching**.

**update_cache**
A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.

**cache_dir**
A path to a cache directory. See **About caching**.

**verbose**
Logical, displays information. Useful for debugging, default is FALSE.

**resolution**
Resolution of the polygon. Values available are "3", "6.5" or "10".

**domain**
Possible values are "land", that includes only the ground part or the ground or "landsea", that includes both the ground and the related sea waters of the basin

**Details**

Metadata available on [https://github.com/rOpenSpain/mapSpain/tree/sianedata/](https://github.com/rOpenSpain/mapSpain/tree/sianedata/).

**Value**

A sf polygon object.

**About caching**

You can set your `cache_dir` with `esp_set_cache_dir()`.

Sometimes cached files may be corrupt. On that case, try re-downloading the data setting `update_cache` = TRUE.

If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your `cache_dir`. Use the option `verbose = TRUE` for debugging the API query.

**Source**

Other natural: `esp_get_hypsobath()`, `esp_get_rivers()`

**Examples**

```r
hydroland <- esp_get_hydrobasin(domain = "land")
hydrolandsea <- esp_get_hydrobasin(domain = "landsea")

library(ggplot2)

ggplot(hydroland) +
  geom_sf(data = hydrolandsea, fill = "skyblue4", alpha = .4) +```
Description

Loads a sf polygon or line object representing the hypsometry and bathymetry of Spain.

- **Hypsometry** represents the elevation and depth of features of the Earth’s surface relative to mean sea level.
- **Bathymetry** is the measurement of the depth of water in oceans, rivers, or lakes.

Usage

```r
esp_get_hypsobath(
  epsg = "4258",
  cache = TRUE,
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE,
  resolution = "3",
  spatialtype = "area"
)
```

Arguments

- **epsg** projection of the map: 4-digit **EPSG code**. One of:
  - "4258": ETRS89
  - "4326": WGS84
  - "3035": ETRS89/ETRS-LAEA
  - "3857": Pseudo-Mercator

- **cache** A logical whether to do caching. Default is TRUE. See About caching.
update_cache  A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.
cache_dir  A path to a cache directory. See About caching.
verbose  Logical, displays information. Useful for debugging, default is FALSE.
resolution  Resolution of the shape. Values available are "3" or "6.5".
spatialtype  Spatial type of the output. Use "area" for polygons or "line" for lines.

Details

Metadata available on https://github.com/rOpenSpain/mapSpain/tree/sianedata/.

Value

A sf polygon or line object.

About caching

You can set your cache_dir with esp_set_cache_dir().

**esp_get_munic**

*Get municipalities of Spain as sf polygons*

**Description**

Returns municipalities of Spain as polygons at a specified scale.

- **esp_get_munic()** uses GISCO (Eurostat) as source. Please use `giscoR::gisco_attributions()`

- **esp_get_munic_siane()** uses CartoBase ANE as source, provided by Instituto Geografico Nacional (IGN), [http://www.ign.es/web/ign/portal](http://www.ign.es/web/ign/portal). Years available are 2005 up to today.

**Usage**

```r
esp_get_munic(
  year = "2019",
  epsg = "4258",
  cache = TRUE,
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE,
  region = NULL,
  munic = NULL,
  moveCAN = TRUE
)

esp_get_munic_siane(
  year = Sys.Date(),
  epsg = "4258",
  cache = TRUE,
  update_cache = FALSE,
```
Arguments

- **year**
  Release year. See Details for years available.

- **epsg**
  Projection of the map: 4-digit EPSG code. One of:
  - "4258": ETRS89
  - "4326": WGS84
  - "3035": ETRS89 / ETRS-LAEA
  - "3857": Pseudo-Mercator

- **cache**
  A logical whether to do caching. Default is TRUE. See About caching.

- **update_cache**
  A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.

- **cache_dir**
  A path to a cache directory. See About caching.

- **verbose**
  Logical, displays information. Useful for debugging, default is FALSE.

- **region**
  A vector of names and/or codes for provinces or NULL to get all the municipalities. See Details.

- **munic**
  A name or regex expression with the names of the required municipalities. NULL would not produce any filtering.

- **moveCAN**
  A logical TRUE/FALSE or a vector of coordinates c(lat, lon). It places the Canary Islands close to Spain’s mainland. Initial position can be adjusted using the vector of coordinates. See Displacing the Canary Islands.

- **resolution**
  Resolution of the polygon. Values available are "3", "6.5" or "10".

- **rawcols**
  Logical. Setting this to TRUE would add the raw columns of the dataset provided by IGN.

Details

The years available are:

- `esp_get_munic_siane()` year could be passed as a single year ("YYYY" format, as end of year) or as a specific date ("YYYY-MM-DD" format). Historical information starts as of 2005.

When using region you can use and mix names and NUTS codes (levels 1, 2 or 3), ISO codes (corresponding to level 2 or 3) or "cpro" (see esp_codelist).

When calling a superior level (Province, Autonomous Community or NUTS1), all the municipalities of that level would be added.
esp_get_munic

Value
A sf polygon

About caching
You can set your cache_dir with `esp_set_cache_dir()`. Sometimes cached files may be corrupt. On that case, try re-downloading the data setting `update_cache = TRUE`. If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your cache_dir. Use the option `verbose = TRUE` for debugging the API query.

Displacing the Canary Islands
While `moveCAN` is useful for visualization, it would alter the actual geographic position of the Canary Islands. When using the output for spatial analysis or using tiles (e.g. with `esp_getTiles()` or `addProviderEspTiles()`) this option should be set to FALSE in order to get the actual coordinates, instead of the modified ones.

Other municipalities: `esp_get_capimun()`, `esp_munic.sf`

Examples

# Get munics
Base <- esp_get_munic(year = "2019", region = "Castilla y Leon")

# Provs for delimiting
provs <- esp_get_prov(prov = "Castilla y Leon")

# Load population data
data("pobmun19")

# Arrange and create breaks
Base_pop <- merge(Base, pobmun19, 
  by = c("cpro", "cmun"),
  all.x = TRUE)
)
br <- sort(c(0, 50, 100, 200, 500, 1000, 5000, 50000, 100000, Inf))

Base_pop$cuts <- cut(Base_pop$pob19, br, dig.lab = 20)

# Plot
library(ggplot2)

ggplot(Base_pop) + geom_sf(aes(fill = cuts), color = NA) + geom_sf(data = provs, fill = NA, color = "grey70") + scale_fill_manual(values = hcl.colors(length(br), "cividis")) + labs(title = "Population in Castilla y Leon", subtitle = "INE, 2019", fill = "Persons") + theme_void()

---

**esp_get_nuts**

**Get NUTS of Spain as sf polygons and points**

**Description**

Returns NUTS regions of Spain as polygons and points at a specified scale, as provided by GISCO (Geographic Information System of the Commission, depending of Eurostat).

NUTS are provided at three different levels:

- **"0"**: Country level
- **"1"**: Groups of autonomous communities
- **"2"**: Autonomous communities
- **"3"**: Roughly matches the provinces, but providing specific individual objects for each major island

**Usage**

```r
esp_get_nuts(
year = "2016",
epsg = "4258",
cache = TRUE,
update_cache = FALSE,
```
Arguments

year

epsg
projection of the map: 4-digit EPSG code. One of:
- "4258": ETRS89
- "4326": WGS84
- "3035": ETRS89 / ETRS-LAEA
- "3857": Pseudo-Mercator

cache
A logical whether to do caching. Default is TRUE. See About caching.

update_cache
A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.

cache_dir
A path to a cache directory. See About caching.

verbose
Logical, displays information. Useful for debugging, default is FALSE.

resolution
Resolution of the geospatial data. One of:
- "60": 1:60million
- "20": 1:20million
- "10": 1:10million
- "03": 1:3million
- "01": 1:1million

spatialtype
Type of geometry to be returned:
- "LB": Labels - point object.
- "RG": Regions - polygon object.

region
Optional. A vector of region names, NUTS or ISO codes (see esp_dict_region_code()).

nuts_level
NUTS level. One of "0" (Country-level), "1", "2" or "3". See Description.

moveCAN
A logical TRUE/FALSE or a vector of coordinates c(lat, lon). It places the Canary Islands close to Spain's mainland. Initial position can be adjusted using the vector of coordinates. See Displacing the Canary Islands.

Value
A sf object specified by spatialtype.
About caching

You can set your cache_dir with `esp_set_cache_dir()`. Sometimes cached files may be corrupt. On that case, try re-downloading the data setting `update_cache = TRUE`.

If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your cache_dir. Use the option `verbose = TRUE` for debugging the API query.

Displacing the Canary Islands

While `moveCAN` is useful for visualization, it would alter the actual geographic position of the Canary Islands. When using the output for spatial analysis or using tiles (e.g. with `esp_getTiles()` or `addProviderEspTiles()`) this option should be set to `FALSE` in order to get the actual coordinates, instead of the modified ones.

Note

Please check the download and usage provisions on `giscoR::gisco_attributions()`.

Examples

```r
NUTS1 <- esp_get_nuts(nuts_level = 1, moveCAN = TRUE)
library(ggplot2)
ggplot(NUTS1) +
  geom_sf() +
  labs(
    title = "NUTS1: Displacing Canary Islands",
    caption = giscoR::gisco_attributions()
  )

NUTS1_alt <- esp_get_nuts(nuts_level = 1, moveCAN = c(15, 0))
ggplot(NUTS1_alt) +
```

```r
```
```
NUTS1_orig <- esp_get_nuts(nuts_level = 1, moveCAN = FALSE)

ggplot(NUTS1_orig) +
  geom_sf() +
  labs(
    title = "NUTS1: Displacing Canary Islands",
    subtitle = "to the right",
    caption = giscoR::gisco_attributions()
  )

AndOriental <-
  esp_get_nuts(region = c("Almeria", "Granada", "Jaen", "Malaga"))

ggplot(AndOriental) +
  geom_sf()

RandomRegions <- esp_get_nuts(region = c("ES1", "ES300", "ES51"))

ggplot(RandomRegions) +
  geom_sf() +
  labs(title = "Random Regions")

MixingCodes <- esp_get_nuts(region = c("ES4", "ES-PV", "Valencia"))

ggplot(MixingCodes) +
  geom_sf() +
  labs(title = "Mixing Codes")

---

**Description**

Returns provinces of Spain as polygons and points at a specified scale.

- `esp_get_prov()` uses GISCO (Eurostat) as source. Please use `giscoR::gisco_attributions()`
• `esp_get_prov_siane()` uses CartoBase ANE as source, provided by Instituto Geográfico Nacional (IGN), [http://www.ign.es/web/ign/portal](http://www.ign.es/web/ign/portal). Years available are 2005 up to today.

Usage

```r
esp_get_prov(prov = NULL, moveCAN = TRUE, ...)
esp_get_prov_siane(prov = NULL, year = Sys.Date(), epsg = "4258", cache = TRUE, update_cache = FALSE, cache_dir = NULL, verbose = FALSE, resolution = "3", moveCAN = TRUE, rawcols = FALSE)
```

Arguments

- **prov** A vector of names and/or codes for provinces or NULL to get all the provinces. See Details.
- **moveCAN** A logical TRUE/FALSE or a vector of coordinates `c(lat, lon)`. It places the Canary Islands close to Spain’s mainland. Initial position can be adjusted using the vector of coordinates. See Displacing the Canary Islands.
- **...** Arguments passed on to `esp_get_nuts`
- **spatialtype** Type of geometry to be returned:
  - "LB": Labels - point object.
  - "RG": Regions - polygon object.
- **year** Release year. See `esp_get_nuts()` for `esp_get_prov()` and Details for `esp_get_prov_siane()`
- **epsg** projection of the map: 4-digit EPSG code. One of:
  - "4258": ETRS89
  - "4326": WGS84
  - "3035": ETRS89 / ETRS-LAEA
  - "3857": Pseudo-Mercator
- **cache** A logical whether to do caching. Default is TRUE. See About caching.
- **update_cache** A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.
- **cache_dir** A path to a cache directory. See About caching.
- **verbose** Logical, displays information. Useful for debugging, default is FALSE.
- **resolution** Resolution of the polygon. Values available are "3", "6.5" or "10".
- **rawcols** Logical. Setting this to TRUE would add the raw columns of the dataset provided by IGN.
Details

When using `prov` you can use and mix names and NUTS codes (levels 1, 2 or 3), ISO codes (corresponding to level 2 or 3) or "cpro" (see `esp_codelist`).

Ceuta and Melilla are considered as provinces on this dataset.

When calling a superior level (Autonomous Community or NUTS1), all the provinces of that level would be added.

On `esp_get_prov_siane()`, year could be passed as a single year ("YYYY" format, as end of year) or as a specific date ("YYYY-MM-DD" format). Historical information starts as of 2005.

Value

A `sf` object specified by `spatialtype`.

About caching

You can set your `cache_dir` with `esp_set_cache_dir()`.

Sometimes cached files may be corrupt. On that case, try re-downloading the data setting `update_cache = TRUE`.

If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your `cache_dir`. Use the option `verbose = TRUE` for debugging the API query.

Displacing the Canary Islands

While `moveCAN` is useful for visualization, it would alter the actual geographic position of the Canary Islands. When using the output for spatial analysis or using tiles (e.g. with `esp_getTiles()` or `addProviderEspTiles()`) this option should be set to `FALSE` in order to get the actual coordinates, instead of the modified ones.

Examples

```r
prov <- esp_get_prov()

library(ggplot2)

ggplot(prov) +
  geom_sf() +
  theme_void()
```
# Random Provinces

Random <- esp_get_prov(prov = c("Zamora", "Palencia", "ES-GR", "ES521", "01"))

ggplot(Random) + geom_sf(aes(fill = codauto), show.legend = FALSE, alpha = 0.5) + scale_fill_manual(values = hcl.colors(nrow(Random), "Spectral") + theme_minimal()

# All Provinces of a Zone plus an addition

Mix <- esp_get_prov(prov = c("Noroeste", "Castilla y Leon", "La Rioja"))

Mix$CCAA <- esp_dict_region_code(Mix$codauto, origin = "codauto")

ggplot(Mix) + geom_sf(aes(fill = CCAA), alpha = 0.5) + scale_fill_discrete(type = hcl.colors(5, "Temps")) + theme_classic()

# ISO codes available

allprovs <- esp_get_prov()

ggplot(allprovs) + geom_sf(fill = NA) + geom_sf_text(aes(label = iso2.prov.code), checkoverlap = TRUE, fontface = "bold") + theme_void()
esp_get_railway

Get sf lines and points with the railways of Spain

Description

Loads a sf lines or point object representing the nodes and railway lines of Spain.

Usage

```r
esp_get_railway(
  year = Sys.Date(),
  epsg = "4258",
  cache = TRUE,
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE,
  spatialtype = "line"
)
```

Arguments

- `year`: Release year.
- `epsg`: Projection of the map: 4-digit EPSG code. One of:
  - "4258": ETRS89
  - "4326": WGS84
  - "3035": ETRS89 / ETRS-LAEA
  - "3857": Pseudo-Mercator
- `cache`: A logical whether to do caching. Default is TRUE. See About caching.
- `update_cache`: A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.
- `cache_dir`: A path to a cache directory. See About caching.
- `verbose`: Logical, displays information. Useful for debugging, default is FALSE.
- `spatialtype`: Spatial type of the output. Use "line" for extracting the railway as lines and "point" for extracting stations.

Value

A sf line or point object.

About caching

You can set your cache_dir with `esp_set_cache_dir()`.

Sometimes cached files may be corrupt. On that case, try re-downloading the data setting `update_cache` = TRUE.
If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your cache_dir. Use the option verbose = TRUE for debugging the API query.

  geom_sf(
    data = rails, aes(color = tipo),
    show.legend = FALSE, lwd = 1.5
  ) +
  geom_sf(
    data = stations,
    color = "red", alpha = 0.5
  ) +
  coord_sf(
    xlim = c(-7.5, -2.5),
    ylim = c(38, 41)
  ) +
  scale_color_manual(values = hcl.colors(
    length(unique(rails$tipo)), "viridis"
  )) +
  theme_minimal()
esp_get_rivers

Get sf polygon and lines of rivers, channels and other wetlands of Spain

Description

 Loads a sf polygon or line object representing rivers, channels, reservoirs and other wetlands of Spain

Usage

```r
esp_get_rivers(
  epsg = "4258",
  cache = TRUE,
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE,
  resolution = "3",
  spatialtype = "line",
  name = NULL
)
```

Arguments

- **epsg**: projection of the map: 4-digit EPSG code. One of:
  - "4258": ETRS89
  - "4326": WGS84
  - "3035": ETRS89 / ETRS-LAEA
  - "3857": Pseudo-Mercator
- **cache**: A logical whether to do caching. Default is TRUE. See About caching.
- **update_cache**: A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.
- **cache_dir**: A path to a cache directory. See About caching.
- **verbose**: Logical, displays information. Useful for debugging, default is FALSE.
- **resolution**: Resolution of the polygon. Values available are "3", "6.5" or "10".
- **spatialtype**: Spatial type of the output. Use "area" for polygons or "line" for lines.
- **name**: Optional. A character or regex expression with the name of the element(s) to be extracted.

Examples

country <- esp_get_country()
Roads <- esp_get_roads()

library(ggplot2)

ggplot(country) +
  geom_sf(fill = "grey90") +
  geom_sf(data = Roads, aes(color = tipo), show.legend = "line") +
  scale_color_manual(
    values = c("#003399", "#003399", "ff0000", "ffff00")
  ) +
  guides(color = guide_legend(direction = "vertical")) +
  theme_minimal() +

esp_get_simplProv

```r
labs(color = "Road type") + theme(legend.position = "bottom")
```

---

**Description**

Loads a simplified map (sf object) with the boundaries of the provinces or autonomous communities of Spain, as provided by the INE (Instituto Nacional de Estadística).

**Usage**

```r
esp_get_simpl_prov(
  prov = NULL,
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE
)
```

```r
esp_get_simpl_ccaa(
  ccaa = NULL,
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE
)
```

**Arguments**

- **prov** A vector of names and/or codes for provinces or NULL to get all the provinces. See Details.
- **update_cache** A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source file.
- **cache_dir** A path to a cache directory. See About caching.
- **verbose** Logical, displays information. Useful for debugging, default is FALSE.
- **ccaa** A vector of names and/or codes for autonomous communities or NULL to get all the autonomous communities. See Details.

**Details**

Results are provided without CRS, as provided on source.

You can use and mix names, ISO codes, "codauto"/"cpro" codes (see esp_codelist) and NUTS codes of different levels.

When using a code corresponding of a higher level (e.g. esp_get_simpl_prov("Andalucia")) all the corresponding units of that level are provided (in this case, all the provinces of Andalucia).
Value

A sf POLYGON object.

About caching

You can set your cache_dir with esp_set_cache_dir(). Sometimes cached files may be corrupt. On that case, try re-downloading the data setting `update_cache = TRUE`. If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your cache_dir. Use the option `verbose = TRUE` for debugging the API query.

```
Description

A sf object including all municipalities of Spain as provided by GISCO (2019 version).

Format

A POLYGON data frame (resolution: 1:1million, EPSG:4258) object with 8,131 rows and fields:

- **codauto**: INE code of each autonomous community.
- **ine.ccaa.name**: INE name of each autonomous community.
- **cpro**: INE code of each province.
- **ine.prov.name**: INE name of each province.
- **cmun**: INE code of each municipality.
- **name**: Name of the municipality.
- **LAU_CODE**: LAU Code (GISCO) of the municipality. This is a combination of **cpro** and **cmun**, aligned with INE coding scheme.
- **geometry**: geometry field.

)
```

---

### Description

A `sf` object including all NUTS levels of Spain as provided by GISCO (2016 version).

### Format

A `POLYGON` data frame (resolution: 1:1 million, EPSG:4258) object with 86 rows and fields:

- COAST_TYPE: COAST_TYPE
- FID: FID
- NUTS_NAME: NUTS name on local alphabet
- MOUNT_TYPE: MOUNT_TYPE
- NAME_LATN: Name on Latin characters
- CNTR_CODE: Eurostat Country code
- URBN_TYPE: URBN_TYPE
- NUTS_ID: NUTS identifier
- LEVL_CODE: NUTS level code (0,1,2,3)
- geometry: geometry field

### Source

Other nuts: `esp_get_nuts()`
Examples

data("esp_nuts.sf")

nuts <- esp_nuts.sf

# Select NUTS 3
nuts3 <- esp_nuts.sf[esp_nuts.sf$LEVL_CODE == 3, ]

# Combine with full shape
spain <- esp_get_country(moveCAN = FALSE)

# Plot Urban Type: See
# https://ec.europa.eu/eurostat/web/rural-development/methodology

library(ggplot2)
nuts3$URBN_TYPE_cat <- as.factor(nuts3$URBN_TYPE)

levels(nuts3$URBN_TYPE_cat)
levels(nuts3$URBN_TYPE_cat) <- c("Urban", "Intermediate", "Rural")

ggplot(nuts3) +
  geom_sf(aes(fill = URBN_TYPE_cat), lwd = .1) +
  scale_fill_manual(values = c("grey80", "#FFC183", "#68AC20")). +
  labs(
    title = "NUTS3 levels of Spain",
    fill = "Urban topology"
  ) +
  theme_linedraw() +
  theme(
    legend.position = c(.8, .2)
  )

esp_set_cache_dir

Set your mapSpain cache dir

Description

This function will store your cache_dir path on your local machine and would load it for future sessions. Type Sys.getenv("MAPSPAIN_CACHE_DIR") to find your cached path.

Alternatively, you can store the cache_dir manually with the following options:

- Run Sys.setenv(MAPSPAIN_CACHE_DIR = "cache_dir"). You would need to run this command on each session (Similar to install = FALSE).
- Set options(mapSpain_cache_dir = "cache_dir"). Similar to the previous option. This is not recommended any more, and it is provided for backwards compatibility purposes.
- Write this line on your .Renviron file: MAPSPAIN_CACHE_DIR = "value_for_cache_dir" (same behavior than install = TRUE). This would store your cache_dir permanently.
Usage

```r
esp_set_cache_dir(
  cache_dir,
  overwrite = FALSE,
  install = FALSE,
  verbose = TRUE
)
```

Arguments

- `cache_dir`: A path to a cache directory. On missing value the function would store the cached files on a temporary dir (See `base::tempdir()`).
- `overwrite`: If this is set to TRUE, it will overwrite an existing MAPSPAIN_CACHE_DIR that you already have in local machine.
- `install`: If TRUE, will install the key in your local machine for use in future sessions. Defaults to FALSE. If cache_dir is FALSE this parameter is set to FALSE automatically.
- `verbose`: Logical, displays information. Useful for debugging, default is FALSE.

Value

An (invisible) character with the path to your `cache_dir`.

See Also

- `rappdirs::user_config_dir()`
- Other cache utilities: `esp_clear_cache()`

Examples

```r
# Don't run this! It would modify your current state
## Not run:
esp_set_cache_dir(verbose = TRUE)
## End(Not run)
Sys.getenv("MAPSPAIN_CACHE_DIR")
```

leaflet.providersESP.df

A data frame containing information of different public WMS and WMTS providers of Spain

This function is a implementation of the javascript plugin leaflet-providersESP v1.3.0.
Format

A data frame object with a list of the required parameters for calling the service:

- **provider**: Provider name.
- **field**: Description of value.
- **value**: INE code of each province.

Details

Providers available to be passed to `type` on `esp_getTiles()` are:
