Package ‘mlr3viz’

January 23, 2023

Title  Visualizations for 'mlr3'

Version  0.6.1

Description  Visualization package of the 'mlr3' ecosystem. It features plots for mlr3 objects such as tasks, learners, predictions, benchmark results, tuning instances and filters via the 'autoplot()' generic of 'ggplot2'. The package draws plots with the 'viridis' color palette and applies the minimal theme. Visualizations include barplots, boxplots, histograms, ROC curves, and Precision-Recall curves.

mlr3viz: Visualizations for 'mlr3'

Description

Visualization package of the 'mlr3' ecosystem. It features plots for mlr3 objects such as tasks, learners, predictions, benchmark results, tuning instances and filters via the 'autoplot()' generic of 'ggplot2'. The package draws plots with the 'viridis' color palette and applies the minimal theme. Visualizations include barplots, boxplots, histograms, ROC curves, and Precision-Recall curves.

---

**as_precrec**

*Convert to 'precrec' Format*

---

**Description**

Converts to a format which is understood by `precrec::evalmod()` of package `precrec`.

**Usage**

```r
as_precrec(object)
```

## S3 method for class 'PredictionClassif'
```r
as_precrec(object)
```

## S3 method for class 'ResampleResult'
```r
as_precrec(object)
```

## S3 method for class 'BenchmarkResult'
```r
as_precrec(object)
```

**Arguments**

- `object` *(any)*
  
  Object to convert.
Value

Object as created by precrec::mmdata().

References

autoplot.BenchmarkResult

Plots for Benchmark Results

Description

Visualizations for mlr3::BenchmarkResult. The argument type controls what kind of plot is drawn. Possible choices are:

- "boxplot" (default): Boxplots of performance measures, one box per mlr3::Learner and one facet per mlr3::Task.
- "roc": ROC curve (1 - specificity on x, sensitivity on y). The mlr3::BenchmarkResult may only have a single mlr3::Task and a single mlr3::Resampling. Note that you can subset any mlr3::BenchmarkResult with its $filter() method (see examples). Requires package precrec.
- "prc": Precision recall curve. See "roc".

Usage

## S3 method for class 'BenchmarkResult'
autoplot(
    object,
    type = "boxplot",
    measure = NULL,
    theme = theme_minimal(),
    ...
)

Arguments

object (mlr3::BenchmarkResult).

type (character(1)): Type of the plot. See description.

measure (mlr3::Measure) Performance measure to use.

theme (ggplot2::theme()) The ggplot2::theme_minimal() is applied by default to all plots.

... (ignored).
Value

```r
ggplot2::ggplot()
```

References

Examples

```r
if (requireNamespace("mlr3")) {
  library(mlr3)
  library(mlr3viz)

  tasks = tsk(c("pima", "sonar"))
  learner = lrns(c("classif.featureless", "classif.rpart"),
                  predict_type = "prob")
  resampling = rsmps("cv")
  object = benchmark(benchmark_grid(tasks, learner, resampling))

  head(fortify(object))
  autoplot(object)
  autoplot(object$clone(deep = TRUE)$filter(task_ids = "pima", type = "roc")
}
```

---

**autoplot.Filter** *Plots for Filter Scores*

**Description**

Visualizations for `mlr3filters::Filter`. The argument type controls what kind of plot is drawn. Possible choices are:

- "barplot" (default): Bar plot of filter scores.

**Usage**

```r
## S3 method for class 'Filter'
autoplot(object, type = "boxplot", n = Inf, theme = theme_minimal(), ...)
```

**Arguments**

- `object` *(mlr3filters::Filter)*
- `type` *(character(1))*: Type of the plot. See description.
- `n` *(integer(1))*: Only include the first `n` features with the highest importance. Defaults to all features.
theme (ggplot2::theme())
The ggplot2::theme_minimal() is applied by default to all plots.

Value

ggplot2::ggplot().

Examples

if (requireNamespace("mlr3")) {
  library(mlr3)
  library(mlr3viz)
  library(mlr3filters)

  task = tsk("mtcars")
  f = flt("correlation")
  f$calculate(task)

  head(fortify(f))
  autoplot(f, n = 5)
}

autoplot.LearnerClassifCVGlmnet

Plots for GLMNet Learners

Description

Visualizations for GLMNet learners using the package ggfortify.

Usage

## S3 method for class 'LearnerClassifCVGlmnet'
autoplot(object, theme = theme_minimal(), ...)

## S3 method for class 'LearnerClassifGlmnet'
autoplot(object, theme = theme_minimal(), ...)

## S3 method for class 'LearnerRegrCVGlmnet'
autoplot(object, theme = theme_minimal(), ...)

## S3 method for class 'LearnerRegrGlmnet'
autoplot(object, theme = theme_minimal(), ...)
Arguments

object  (mlr3learners::LearnerClassifGlmnet | mlr3learners::LearnerRegrGlmnet | mlr3learners::LearnerRegrCVGlmnet | mlr3learners::LearnerRegrCVGlmnet).

theme  (ggplot2::theme())

The ggplot2::theme_minimal() is applied by default to all plots.

Value

ggplot2::ggplot().

References

Examples

```r
## Not run:
library(mlr3)
library(mlr3viz)
library(mlr3learners)

# classification
task = tsk("sonar")
learner = lrn("classif.glmnet")
learner$train(task)
autoplot(learner)

# regression
task = tsk("mtcars")
learner = lrn("regr.glmnet")
learner$train(task)
autoplot(learner)

## End(Not run)
```

Description

Visualizations rpart trees using the package ggparty.
Usage

```r
## S3 method for class 'LearnerClassifRpart'
autoplot(object, theme = theme_minimal(), ...)

## S3 method for class 'LearnerRegrRpart'
autoplot(object, theme = theme_minimal(), ...)
```

Arguments

- `object` (mlr3::LearnerClassifRpart | mlr3::LearnerRegrRpart).
- `theme` (ggplot2::theme()).
  The `ggplot2::theme_minimal()` is applied by default to all plots.
- `...` (ignored).

Value

`ggplot2::ggplot()`.

Examples

```r
if (requireNamespace("mlr3")) {
  library(mlr3)
  library(mlr3viz)

  # classification
  task = tsk("iris")
  learner = lrn("classif.rpart", keep_model = TRUE)
  learner$train(task)
  autoplot(learner)

  # regression
  task = tsk("mtcars")
  learner = lrn("regr.rpart", keep_model = TRUE)
  learner$train(task)
  autoplot(learner)
}
```

Description

Visualizations for hierarchical clusters. The argument `type` controls what kind of plot is drawn. Possible choices are:

- "dend" (default): Dendrograms using `ggdendro` package.
- "scree": Scree plot that shows the number of possible clusters on the x-axis and the height on the y-axis.
**Usage**

```r
## S3 method for class 'LearnerClustHierarchical'
autoplot(
  object,
  type = "dend",
  task = NULL,
  theme = theme_minimal(),
  theme_dendro = TRUE,
  ...
)
```

**Arguments**

- `object`: (mlr3cluster::LearnerClustAgnes | mlr3cluster::LearnerClustDiana | mlr3cluster::LearnerClustHclust).
- `type`: (character(1)), Type of the plot. See description.
- `task`: (mlr3::Task) Optionally, pass the task to add labels of observations to a hclust dendrogram. Labels are set via the row names of the task.
- `theme`: (ggplot2::theme()) The ggplot2::theme_minimal() is applied by default to all plots.
- `theme_dendro`: (logical(1)) If TRUE (default), the special dendrogram theme from ggdendro package is used in plot "dend". Set to FALSE to use the theme passed in `theme`.
- `...` (ignored).

**Value**

ggplot2::ggplot().

**Examples**

```r
if (requireNamespace("mlr3")) {
  library(mlr3)
  library(mlr3cluster)
  library(mlr3viz)

  task = tsk("usarrests")

  # agnes clustering
  learner = lrn("clust.agnes")
  learner$train(task)
  autoplot(learner)

  # diana clustering
  learner = lrn("clust.diana")
  learner$train(task)
  autoplot(learner)
}
# hclust clustering
learner = lrn("clust.hclust")
learner$train(task)
autoplot(learner, type = "scree")

---

autoplot.OptimInstanceSingleCrit

*Plots for Optimization Instances*

**Description**

Visualizations for `bbotk::OptimInstanceSingleCrit`. The argument `type` controls what kind of plot is drawn. Possible choices are:

- "marginal" (default): Scatter plots of x versus y. The color of the points shows the batch number.
- "performance": Scatter plots of batch number versus y
- "parameter": Scatter plots of batch number versus input. The color of the points shows the y values.
- "parallel": Parallel coordinates plot. x values are rescaled by \((x - \text{mean}(x)) / \text{sd}(x)\).
- "points": Scatter plot of two x dimensions versus. The color of the points shows the y values.
- "surface": Surface plot of two x dimensions versus y values. The y values are interpolated with the supplied `mlr3::Learner`.
- "pairs": Plots all x and y values against each other.

**Usage**

```r
## S3 method for class 'OptimInstanceSingleCrit'
autoplot(
  object,
  type = "marginal",
  cols_x = NULL,
  trafo = FALSE,
  learner = mlr3::lrn("regr.ranger"),
  grid_resolution = 100,
  batch = NULL,
  theme = theme_minimal(),
  ...
)
```
Arguments

- **object** (bbotk::OptimInstanceSingleCrit).
- **type** (character(1)): Type of the plot. See description.
- **cols_x** (character()) Column names of x values. By default, all untransformed x values from the search space are plotted. Transformed hyperparameters are prefixed with x_domain_.
- **trafo** (logical(1)) If FALSE (default), the untransformed x values are plotted. If TRUE, the transformed x values are plotted.
- **learner** (mlr3::Learner) Regression learner used to interpolate the data of the surface plot.
- **grid_resolution** (numeric()) Resolution of the surface plot.
- **batch** (integer()) The batch number(s) to limit the plot to. The default is all batches.
- **theme** (ggplot2::theme()) The ggplot2::theme_minimal() is applied by default to all plots.
- **...** (ignored).

Value

ggplot2::ggplot().

Examples

```r
if (requireNamespace("mlr3") && requireNamespace("bbotk") && requireNamespace("patchwork")) {
  library(bbotk)
  library(paradox)

  fun = function(xs) {
    c(y = -(xs[[1]] - 2)^2 - (xs[[2]] + 3)^2 + 10)
  }
  domain = ps(
    x1 = p_dbl(-10, 10),
    x2 = p_dbl(-5, 5)
  )
  codomain = ps(
    y = p_dbl(tags = "maximize")
  )
  obfun = ObjectiveRFun$new(
    fun = fun,
    domain = domain,
    codomain = codomain
  )

  instance = OptimInstanceSingleCrit$new(objective = obfun, terminator = trm("evals", n_evals = 20))
}
optimizer = opt("random_search", batch_size = 2)
optimizer$optimize(instance)

# plot y versus batch number
autoplot(instance, type = "performance")

# plot x1 values versus performance
autoplot(instance, type = "marginal", cols_x = "x1")

# plot parallel coordinates plot
autoplot(instance, type = "parallel")

# plot pairs
autoplot(instance, type = "pairs")

autoplot.PredictionClassif

Plots for Classification Predictions

Description
Visualizations for mlr3::PredictionClassif. The argument type controls what kind of plot is drawn. Possible choices are:

- "stacked" (default): Stacked barplot of true and estimated class labels.
- "roc": ROC curve (1 - specificity on x, sensitivity on y). Requires package precrec.
- "prc": Precision recall curve. Requires package precrec.
- "threshold": Systematically varies the threshold of the mlr3::PredictionClassif object and plots the resulting performance as returned by measure.

Usage
## S3 method for class 'PredictionClassif'
autoplot(
  object,
  type = "stacked",
  measure = NULL,
  theme = theme_minimal(),
  ...
)

Arguments

- object: (mlr3::PredictionClassif).
- type: (character(1)); Type of the plot. See description.
autoplot.PredictionClust

**Description**

Visualizations for mlr3cluster::PredictionClust. The argument type controls what kind of plot is drawn. Possible choices are:

- "scatter" (default): scatterplot with correlation values and colored cluster assignments.
- "sil": Silhouette plot with mean silhouette value as the reference line. Requires package ggfortify.
- "pca": Perform PCA on data and color code cluster assignments. Inspired by and uses ggfortify::autoplot.kmeans.

**Value**

ggplot2::ggplot()
Usage

```r
## S3 method for class 'PredictionClust'
autoplot(
  object,
  task,
  row_ids = NULL,
  type = "scatter",
  theme = theme_minimal(),
  ...
)
```

Arguments

- **object** (`mlr3cluster::PredictionClust`).
- **task** (`mlr3cluster::TaskClust`).
- **row_ids** (`integer()`) Row ids to subset task data to ensure that only the data used to make predictions are shown in plots.
- **type** (`character(1)`): Type of the plot. See description.
- **theme** (`ggplot2::theme()`): The `ggplot2::theme_minimal()` is applied by default to all plots.
- **...** (ignored).

Value

`ggplot2::ggplot()`.

References

Examples

```r
if (requireNamespace("mlr3")) {
  library(mlr3)
  library(mlr3cluster)
  library(mlr3viz)

  task = tsk("usarrests")
  learner = lrn("clust.kmeans", centers = 3)
  object = learner$train(task)$predict(task)

  head(fortify(object))
  autoplot(object, task)
}
```
**Description**

Visualizations for `mlr3::PredictionRegr`. The argument `type` controls what kind of plot is drawn. Possible choices are:

- "xy" (default): Scatterplot of "true" response vs. "predicted" response. By default a linear model is fitted via `geom_smooth(method = "lm")` to visualize the trend between x and y (by default colored blue). In addition `geom_abline()` with `slope = 1` is added to the plot. Note that `geom_smooth()` and `geom_abline()` may overlap, depending on the given data.
- "histogram": Histogram of residuals: \( r = y - \hat{y} \).
- "residual": Plot of the residuals, with the response \( \hat{y} \) on the "x" axis and the residuals on the "y" axis. By default a linear model is fitted via `geom_smooth(method = "lm")` to visualize the trend between x and y (by default colored blue).

**Usage**

```r
## S3 method for class 'PredictionRegr'
autoplot(object, type = "xy", binwidth = NULL, theme = theme_minimal(), ...)
```

**Arguments**

- `object` (mlr3::PredictionRegr).
- `type` (character(1)): Type of the plot. See description.
- `binwidth` (integer(1)): Width of the bins for the histogram.
- `theme` (ggplot2::theme()): The `ggplot2::theme_minimal()` is applied by default to all plots.
  
**Value**

`ggplot2::ggplot()`.

**Examples**

```r
if (requireNamespace("mlr3")) {
  library(mlr3)
  library(mlr3viz)

  task = tsk("boston_housing")
  learner = lrn("regr.rpart")
```
object = learner$train(task)$predict(task)

head(fortify(object))
autoplot(object)
autoplot(object, type = "histogram", binwidth = 1)
autoplot(object, type = "residual")

autoplot.ResampleResult

Plots for Resample Results

Description

Visualizations for mlr3::ResampleResult. The argument type controls what kind of plot is drawn. Possible choices are:

- "boxplot" (default): Boxplot of performance measures.
- "histogram": Histogram of performance measures.
- "roc": ROC curve (1 - specificity on x, sensitivity on y). The predictions of the individual mlr3::Resamplings are merged prior to calculating the ROC curve (micro averaged). Requires package precrec.
- "prc": Precision recall curve. See "roc".
- "prediction": Plots the learner prediction for a grid of points. Needs models to be stored. Set store_models = TRUE for [mlr3::resample]. For classification, we support tasks with exactly two features and learners with predict_type= set to "response" or "prob". For regression, we support tasks with one or two features. For tasks with one feature we can print confidence bounds if the predict type of the learner was set to "se". For tasks with two features the predict type will be ignored.

Usage

## S3 method for class 'ResampleResult'
autoplot(
  object,
  type = "boxplot",
  measure = NULL,
  predict_sets = "test",
  binwidth = NULL,
  theme = theme_minimal(),
  ...
)
Arguments

object (mlr3::ResampleResult).
type (character(1)): Type of the plot. See description.
measure (mlr3::Measure) Performance measure to use.
predict_sets (character()) Only for type set to "prediction". Which points should be shown in the plot?
Can be a subset of ("train", "test") or empty.
binwidth (integer(1)) Width of the bins for the histogram.
theme (ggplot2::theme()) The ggplot2::theme_minimal() is applied by default to all plots.
... (ignored).

Value

ggplot2::ggplot().

References

Examples

if (requireNamespace("mlr3")) {
  library(mlr3)
  library(mlr3viz)

  task = tsk("sonar")
  learner = lrn("classif.rpart", predict_type = "prob")
  resampling = rsmp("cv")
  object = resample(task, learner, resampling)

  head(fortify(object))

  # Default: boxplot
  autoplot(object)

  # Histogram
  autoplot(object, type = "histogram", bins = 30)

  # ROC curve, averaged over resampling folds:
  autoplot(object, type = "roc")

  # ROC curve of joint prediction object:
  autoplot(object$prediction(), type = "roc")}
# Precision Recall Curve
autoplot(object, type = "prc")

# Prediction Plot
task = tsk("iris")$select(c("Sepal.Length", "Sepal.Width"))
resampling = rsmp("cv", folds = 3)
object = resample(task, learner, resampling, store_models = TRUE)
autoplot(object, type = "prediction")

---

### autoplot.TaskClassif

**Plots for Classification Tasks**

#### Description

Visualizations for `mlr3::TaskClassif`. The argument type controls what kind of plot is drawn. Possible choices are:

- "target" (default): Bar plot of the target variable (default).
- "duo": Passes data to `GGally::ggduo()`. `columnsX` is the target and `columnsY` are the features.
- "pairs": Passes data to `GGally::ggpairs()`. Color is set to target column.

#### Usage

```r
## S3 method for class 'TaskClassif'
autoplot(object, type = "target", theme = theme_minimal(), ...)
```

#### Arguments

- `object` (`mlr3::TaskClassif`).
- `type` (character(1)): Type of the plot. See description.
- `theme` (`ggplot2::theme()`) The `ggplot2::theme_minimal()` is applied by default to all plots.
- `...` (ignored).

#### Value

`ggplot2::ggplot()`.
Examples

```r
if (requireNamespace("mlr3")) {
  library(mlr3)
  library(mlr3viz)

  task = tsk("iris")

  head(fortify(task))
  autoplot(task)
  autoplot(task$clone()$select(c("Sepal.Length", "Sepal.Width")),
          type = "pairs")
  autoplot(task, type = "duo")
}
```

---

**autoplot.TaskClust**

### Plots for Clustering Tasks

**Description**

Visualizations for `mlr3cluster::TaskClust`. The argument `type` controls what kind of plot is drawn. Possible choices are:

- "pairs" (default): Passes data `GGally::ggpairs()`.

**Usage**

```r
## S3 method for class 'TaskClust'
autoplot(object, type = "pairs", theme = theme_minimal(), ...)
```

**Arguments**

- `object` (mlr3cluster::TaskClust).
- `type` (character(1)): Type of the plot. See description.
- `theme` (ggplot2::theme())
  The `ggplot2::theme_minimal()` is applied by default to all plots.
- `...` (ignored).

**Value**

`ggplot2::ggplot()`.
Examples

```r
if (requireNamespace("mlr3")) {
  library(mlr3)
  library(mlr3cluster)
  library(mlr3viz)

  task = mlr_tasks$get("usarrests")

  head(fortify(task))
  autoplot(task)
}
```

**autoplot.TaskRegr**

Plots for Regression Tasks

**Description**

Visualizations for **mlr3::TaskRegr**. The argument type controls what kind of plot is drawn. Possible choices are:

- "target" (default): Box plot of the target variable.
- "pairs": Passes data to **GGally::ggpairs()**. Color is set to target column.

**Usage**

```r
## S3 method for class 'TaskRegr'
autoplot(object, type = "target", theme = theme_minimal(), ...)
```

**Arguments**

- **object** *(mlr3::TaskRegr)*.
- **type** *(character(1))*: Type of the plot. See description.
- **theme** *(ggplot2::theme())*: The `ggplot2::theme_minimal()` is applied by default to all plots.
- **...** *(ignored)*.

**Value**

`ggplot2::ggplot()`.
Examples

```r
if (requireNamespace("mlr3")) {
  library(mlr3)
  library(mlr3viz)
  
  task = tsk("mtcars")
  task$select(c("am", "carb"))
  
  head(fortify(task))
  autoplot(task)
  autoplot(task, type = "pairs")
}
```

Description

Visualizations for `mlr3tuning::TuningInstanceSingleCrit`. The argument `type` controls what kind of plot is drawn. Possible choices are:

- "marginal" (default): Scatter plots of x versus y. The color of the points shows the batch number.
- "performance": Scatter plots of batch number versus y
- "parameter": Scatter plots of batch number versus input. The color of the points shows the y values.
- "parallel": Parallel coordinates plot. hyperparameters are rescaled by (x - mean(x)) / sd(x).
- "points": Scatter plot of two x dimensions versus. The color of the points shows the y values.
- "surface": Surface plot of two x dimensions versus y values. The y values are interpolated with the supplied `mlr3::Learner`.
- "pairs": Plots all x and y values against each other.

Usage

```r
## S3 method for class 'TuningInstanceSingleCrit'
autoplot(
  object, 
  type = "marginal", 
  cols_x = NULL, 
  trafo = FALSE, 
  learner = mlr3::lrn("regr.ranger"), 
  grid_resolution = 100, 
  theme = theme_minimal(), 
  ...
)
```
Arguments

object (mlr3tuning::TuningInstanceSingleCrit.

Type of the plot. See description.

cols_x (character())
Column names of hyperparameters. By default, all untransformed hyperparameters are plotted. Transformed hyperparameters are prefixed with x_domain_.

trafo (logical(1))
If FALSE (default), the untransformed hyperparameters are plotted. If TRUE, the transformed hyperparameters are plotted.

learner (mlr3::Learner)
Regression learner used to interpolate the data of the surface plot.

grid_resolution (numeric())
Resolution of the surface plot.

theme (ggplot2::theme())
The ggplot2::theme_minimal() is applied by default to all plots.

Value

ggplot2::ggplot().

Examples

if (requireNamespace("mlr3tuning") && requireNamespace("patchwork")) {
  library(mlr3tuning)

  learner = lrn("classif.rpart")
  learner$param_set$values$cp = to_tune(0.001, 0.1)
  learner$param_set$values$minsplit = to_tune(1, 10)

  instance = TuningInstanceSingleCrit$new(
    task = tsk("iris"),
    learner = learner,
    resampling = rsmp("holdout"),
    measure = msr("classif.ce"),
    terminator = trm("evals", n_evals = 10))

  tuner = tnr("random_search")

  tuner$optimize(instance)

  # plot performance versus batch number
  autoplot(instance, type = "performance")

  # plot cp values versus performance
  autoplot(instance, type = "marginal", cols_x = "cp")
# plot transformed parameter values versus batch number
autoplot(instance, type = "parameter", trafo = TRUE)

# plot parallel coordinates plot
autoplot(instance, type = "parallel")

# plot pairs
autoplot(instance, type = "pairs")

---

plot_learner_prediction

Plots for Learner Predictions

Description

Visualizations for the mlr3::Prediction of a single mlr3::Learner on a single mlr3::Task.

- For classification we support tasks with exactly two features and learners with predict_type set to "response" or "prob".
- For regression we support tasks with one or two features. For tasks with one feature we print confidence bounds if the predict type of the learner was set to "se". For tasks with two features the predict type will be ignored.

Note that this function is a wrapper around autoplot.ResampleResult() for a temporary mlr3::ResampleResult using mlr3::mlr_resamplings_holdout with ratio 1 (all observations in the training set).

Usage

plot_learner_prediction(learner, task, grid_points = 100L, expand_range = 0)

Arguments

- learner (mlr3::Learner).
- task (mlr3::Task).
- grid_points (integer(1))
  Resolution of the grid. For factors, ordered and logicals this value is ignored.
- expand_range (numeric(1))
  Expand the prediction range for numerical features.

Value

ggplot2::ggplot()
Examples

```r
if (requireNamespace("mlr3")) {
  library(mlr3)
  library(mlr3viz)

  task = mlr3::tsk("pima")$select(c("age", "glucose"))
  learner = lrn("classif.rpart", predict_type = "prob")
  p = plot_learner_prediction(learner, task)
  print(p)
}
```

predict_grid  
Generated a data.table of evenly distributed points.

Description

For each point we have the predicted class / regression value in column response. If the learner predicts probabilities, a column ".prob.response" is added that contains the probability of the predicted class.

Usage

```r
predict_grid(learners, task, grid_points, expand_range)
```

Arguments

- `learners`: list of trained learners, each learner belongs to one resampling iteration
- `task`: the task all learners are trained on
- `grid_points`: (int): see sequenize
- `expand_range`: see sequenize
