Package ‘ojsr’

October 14, 2022

Type Package
Title Crawler and Data Scraper for Open Journal System (‘OJS’)
Version 0.1.2
Description Crawler for ‘OJS’ pages and scraper for meta-data from articles.
You can crawl ‘OJS’ archives, issues, articles, galleys, and search results.
You can scrape articles metadata from their head tag in html,
or from Open Archives Initiative (‘OAI’) records.
Most of these functions rely on ‘OJS’ routing conventions
License GPL-3
Encoding UTF-8
LazyData true
Imports dplyr (>= 0.8.3), magrittr, rvest, tidyr (>= 1.0), urltools,
xml2, purrr, rlang
Suggests knitr, rmarkdown, testthat, tidyverse
VignetteBuilder knitr
RoxygenNote 7.1.1
NeedsCompilation no

get_articles_from_issue

Scraping articles URLs from the ToC of OJS issues

Description

Takes a vector of OJS (issue) URLs and scrapes the links to articles from the issues table of content

Usage

get_articles_from_issue(input_url, verbose = FALSE)

Arguments

input_url Character vector.
verbose Logical.

Value

A long-format dataframe with the url you provided (input_url) and the articles url scrapped (output_url)

Examples

issues <- c(
  'https://revistas.ucn.cl/index.php/saludysociedad/issue/view/65',
)
articles <- ojsr::get_articles_from_issue(input_url = issues, verbose = TRUE)

---

get_articles_from_search

*Scraping OJS search results for a given criteria to retrieve articles’ URL*

---

**Description**

takes a vector of OJS URLs and a string for search criteria to compose search result URLs, (including pagination) then it scrapes them to retrieve the articles’ URLs.

**Usage**

```r
get_articles_from_search(input_url, search_criteria, verbose = FALSE)
```

**Arguments**

- `input_url` : Character vector.
- `search_criteria` : Character string
- `verbose` : Logical.

**Value**

A dataframe with the urls of the articles linked from the OJS issue page.

**Examples**

```r
journals <- c(
  'https://revistapsicologia.uchile.cl/index.php/RDP/',
  'https://publicaciones.sociales.uba.ar/index.php/psicologiasocial/
)
criteria <- 'actitudes'
search_result_pages <- ojsr::get_articles_from_search(input_url = journals, 
  search_criteria = criteria, verbose = TRUE)
```

---

get_galleys_from_article

*Scraping galleys URLs from OJS articles*

---

**Description**

Takes a vector of OJS URLs and scrapes all the galleys URLs from the article view.
Usage

get_galleys_from_article(input_url, verbose = FALSE)

Arguments

input_url    Character vector.
verbose      Logical.

Value

A long-format dataframe with the url you provided (input_url), the article's url scrapped (output_url), the format of the galley (format), and the url that forces download of the galley (download_url)

Examples

articles <- c(
  'https://dspace.palermo.edu/ojs/index.php/psicodebate/article/view/516/311'
)
galleys <- ojsr::get_galleys_from_article(input_url = articles, verbose = TRUE)

get_html_meta_from_article

Scraping metadata from the OJS articles HTML

Description

Takes a vector of OJS URLs and scrapes all metadata written in HTML from the article view

Usage

get_html_meta_from_article(input_url, verbose = FALSE)

Arguments

input_url    Character vector.
verbose      Logical.

Value

A long-format dataframe with the url you provided (input_url), the name of the metadata (meta_data_name), the content of the metadata (meta_data_content), the standard in which the content is annotated (meta_data_scheme), and the language in which the metadata was entered (meta_data_xmllang)
get_issues_from_archive

Examples

articles <- c(
  'https://publicaciones.sociales.uba.ar/index.php/psicologiasocial/article/view/2137', # article
  'https://dspace.palermo.edu/ojs/index.php/psicodebate/article/view/516/311' # xml galley
)
metadata <- ojsr::get_html_meta_from_article(articles, verbose = TRUE)

get_issues_from_archive

Scraping issues’ URLs from the OJS issues archive

Description

Takes a vector of OJS URLs and scrapes the issues URLs from the issue archive.

Usage

get_issues_from_archive(input_url, verbose = FALSE)

Arguments

input_url Character vector.
verbose Logical.

Value

A long-format dataframe with the url you provided (input_url) and the url of issues found (output_url)

Examples

journals <- c(
  'https://dspace.palermo.edu/ojs/index.php/psicodebate/issue/archive',
)
issues <- ojsr::get_issues_from_archive(input_url = journals, verbose = TRUE)
get_oai_meta_from_article

Retrieving OAI records for OJS articles

Description

This function accesses OAI records (within OJS) for any article for which you provided an URL.

Usage

`get_oai_meta_from_article(input_url, verbose = FALSE)`

Arguments

- `input_url`: Character vector.
- `verbose`: Logical.

Details

Several limitations are in place. Please refer to vignette.

Value

A long-format dataframe with the URL you provided (input_url), the name of the metadata (meta_data_name), and the content of the metadata (meta_data_content).

Examples

```r
articles <- c(
  'https://publicaciones.sociales.uba.ar/index.php/psicologiasocial/article/view/2137', # article
  'https://dspace.palermo.edu/ojs/index.php/psicodebate/article/view/516/311' # xml galley
)
metadata_oai <- ojsr::get_oai_meta_from_article(input_url = articles, verbose = TRUE)
```

ojsr

ojsr: A package for scraping OJS

Description

This package allows you to crawl OJS archives, issues, articles, galleys, and search results, and retrieve metadata from articles. This is useful if OJS Rest API is not available (as in installations prior to v3.1). It also includes functions to parse OJS specific URL conventions.
**parse_base_url**

Parses urls against OJS routing conventions and retrieves the base url

**Description**

Takes a vector of urls and parses them according to OJS routing conventions, then retrieves OJS base url.

**Usage**

```r
parse_base_url(input_url)
```

**Arguments**

- **input_url**: Character vector.

**Value**

A vector of the same length of your input.

**Examples**

```r
mix_links <- c(
  'https://dspace.palermo.edu/ojs/index.php/psicodebate/issue/archive',
)
base_url <- ojsr::parse_base_url(input_url = mix_links)
```

---

**parse_oai_url**

Parses urls against OJS routing conventions and retrieves the OAI url

**Description**

Takes a vector of urls and parses them according to OJS routing conventions, then retrieves OAI entry url.

**Usage**

```r
parse_oai_url(input_url)
```

**Arguments**

- **input_url**: Character vector.
parse_oai_url

Value
A vector of the same length of your input.

Examples

mix_links <- c(
  'https://dspace.palermo.edu/ojs/index.php/psicodebate/issue/archive',
)
oai_url <- ojsr::parse_oai_url(input_url = mix_links)
