R topics documented:

| | |
|---------------------------|----------|
| create_postcard | 2 |
| jolla | 3 |
| jolla_blue | 3 |
| onofre | 4 |
| solana | 4 |
| trestles | 5 |
| Index | 6 |

| | |
|-----------------|------------------------------|
| create_postcard | <i>Create a new postcard</i> |
|-----------------|------------------------------|

Description

Create (and optionally edit) a new postcard.

Usage

```
create_postcard(  
  file = "index.Rmd",  
  template = "jolla",  
  create_dir = FALSE,  
  edit = TRUE,  
  create_image = TRUE  
)
```

Arguments

| | |
|--------------|---|
| file | File name for the draft |
| template | Template to use as the basis for the draft. This is either the full path to a template directory or the name of a template directory within the rmarkdown/templates directory of a package. |
| create_dir | TRUE to create a new directory for the postcard (defaults to FALSE). |
| edit | TRUE to edit the template immediately |
| create_image | TRUE to create a placeholder image (defaults to TRUE). |

Details

Valid values for the template argument include "jolla", "jolla-blue", "trestles", "onofre", and "solana".

Examples

```
## Not run:  
  
postcards::create_postcard(template = "jolla")  
postcards::create_postcard(template = "jolla-blue")  
postcards::create_postcard(template = "trestles")  
postcards::create_postcard(template = "onofre")  
postcards::create_postcard(template = "solana")  
  
## End(Not run)
```

| | |
|-------|--------------------------------|
| jolla | <i>Jolla website template.</i> |
|-------|--------------------------------|

Description

Jolla website template.

Usage

```
jolla(css = NULL, includes = NULL)
```

Arguments

| | |
|----------|---|
| css | CSS and/or Sass files to include. Files with an extension of .sass or .scss are compiled to CSS via <code>sass::sass()</code> . Also, if theme is a <code>bslib::bs_theme()</code> object, Sass code may reference the relevant Bootstrap Sass variables, functions, mixins, etc. |
| includes | Named list of additional content to include within the document (typically created using the <code>includes</code> function). |

| | |
|------------|-------------------------------------|
| jolla_blue | <i>Jolla Blue website template.</i> |
|------------|-------------------------------------|

Description

Jolla Blue website template.

Usage

```
jolla_blue(css = NULL, includes = NULL)
```

Arguments

| | |
|----------|---|
| css | CSS and/or Sass files to include. Files with an extension of .sass or .scss are compiled to CSS via <code>sass::sass()</code> . Also, if theme is a <code>bslib::bs_theme()</code> object, Sass code may reference the relevant Bootstrap Sass variables, functions, mixins, etc. |
| includes | Named list of additional content to include within the document (typically created using the <code>includes</code> function). |

| | |
|--------|---------------------------------|
| onofre | <i>Onofre website template.</i> |
|--------|---------------------------------|

Description

Onofre website template.

Usage

```
onofre(css = NULL, includes = NULL)
```

Arguments

| | |
|----------|---|
| css | CSS and/or Sass files to include. Files with an extension of .sass or .scss are compiled to CSS via <code>sass::sass()</code> . Also, if theme is a <code>bslib::bs_theme()</code> object, Sass code may reference the relevant Bootstrap Sass variables, functions, mixins, etc. |
| includes | Named list of additional content to include within the document (typically created using the <code>includes</code> function). |

| | |
|--------|---------------------------------|
| solana | <i>Solana website template.</i> |
|--------|---------------------------------|

Description

Solana website template.

Usage

```
solana(css = NULL, includes = NULL)
```

Arguments

| | |
|----------|---|
| css | CSS and/or Sass files to include. Files with an extension of .sass or .scss are compiled to CSS via <code>sass::sass()</code> . Also, if theme is a <code>bslib::bs_theme()</code> object, Sass code may reference the relevant Bootstrap Sass variables, functions, mixins, etc. |
| includes | Named list of additional content to include within the document (typically created using the <code>includes</code> function). |

| | |
|----------|-------------------------------------|
| trestles | <i>Jolla Blue website template.</i> |
|----------|-------------------------------------|

Description

Jolla Blue website template.

Usage

```
trestles(css = NULL, includes = NULL)
```

Arguments

| | |
|----------|---|
| css | CSS and/or Sass files to include. Files with an extension of .sass or .scss are compiled to CSS via <code>sass::sass()</code> . Also, if there is a <code>bslib::bs_theme()</code> object, Sass code may reference the relevant Bootstrap Sass variables, functions, mixins, etc. |
| includes | Named list of additional content to include within the document (typically created using the <code>includes</code> function). |
