Package ‘rsdmx’

August 28, 2023

Version 0.6-3
Date 2023-08-28
Title Tools for Reading SDMX Data and Metadata
Maintainer Emmanuel Blondel <emmanuel.blondel1@gmail.com>
Depends R (>= 2.15)
Imports R6, methods, XML (>= 3.98-1.3), httr, plyr, utils
Suggests testthat, knitr, roxygen2, markdown
Description Set of classes and methods to read data and metadata documents
exchanged through the Statistical Data and Metadata Exchange (SDMX) framework,
currently focusing on the SDMX XML standard format (SDMX-ML).
License GPL (>= 2)

addSDMXServiceProvider

**Description**

function that allows configuring a new SDMXServiceProvider as part of the list of providers known by rsdmx, hence by readSDMX

**Usage**

```
addSDMXServiceProvider(provider)
```

**Arguments**

- **provider**
  
an object of class "SDMXServiceProvider"

**Author(s)**

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

**See Also**

getSDMXServiceProviders findSDMXServiceProvider readSDMX

**Examples**

```
# create a provider
myBuilder <- SDMXREST20RequestBuilder(regUrl = "http://www.myorg.org/registry",
                                        repoUrl = "http://www.myorg.org/repository",
                                        compliant = TRUE)

myProvider <- SDMXServiceProvider(
  agencyId = "MYORG", name = "My Organization",
  builder = myBuilder)

# add it
addSDMXServiceProvider(myProvider)
```
findNamespace

# check out the list of existing provider (only list the agency Ids)
sapply(slot(getSDMXServiceProviders(), "providers"), function(x){slot(x, "agencyId")})

findNamespace

findNamespace

Description

function used to find a specific namespace within the available namespaces of an SDMX-ML object

Usage

findNamespace(namespaces, messageType)

Arguments

namespaces object of class data.frame giving the namespaces URIs available in a SDMX-ML object, typically obtained with getNamespaces

messageType object of class character representing a message type

Value

an object of class "character" giving the namespace uri if found in the available namespaces

Warning

findNamespace is a function used internally as utility function in SDMX-ML object parsers.

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

See Also

SDMX-class getNamespaces
Description

function that allows searching by provider id in the list of known SDMXServiceProvider. This function can be used for interrogating the list of default providers known by rsdmx, and is used internally by readSDMX

Usage

findSDMXServiceProvider(agencyId)

Arguments

agencyId an object of class "character" representing a provider identifier

Value

an object of class "SDMXServiceProvider" (or NULL if no matching)

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

See Also

getSDMXServiceProviders addSDMXServiceProvider readSDMX

Examples

#find OECD provider
oecd.provider <- findSDMXServiceProvider("OECD")

description

Access the namespaces of the SDMX-ML object
Usage

getNamespaces(obj)

## S4 method for signature 'SDMX'
getNamespaces(obj)

Arguments

obj An object deriving from class "SDMX"

Value

an object of class data.frame giving the id and uri for each of the namespaces handled in the SDMX-ML document.

Methods (by class)

• getNamespaces(SDMX): Access the namespaces of the SDMX-ML object

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

See Also

SDMX-class

Description

function used to extract the SDMX-ML message from a registry interface query

Usage

getRegistryInterfaceResult(xmlObj)

Arguments

xmlObj object of class "XMLInternalDocument derived from XML package"

Value

an object of class "XMLInternalDocument derived from XML package"
getSDMXServiceProviders

Warning
getRegistryInterfaceResult is a function used internally by readSDMX

Author(s)
Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

See Also
SDMX-class readSDMX

getSDMXServiceProviders

Description
function used to get the list of SDMXServiceProvider known by rsdmx (hence known by readSDMX to query data or metadata in an easier way). This function can be easily used to interrogate the list of known providers, and eventually consider adding one at runtime with addSDMXServiceProvider

Usage
getSDMXServiceProviders()

Value
an object of class "list" (of SDMXServiceProvider)

Author(s)
Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

See Also
addSDMXServiceProvider findSDMXServiceProvider readSDMX
getSoapRequestResult

Description
function used to extract the SDMX-ML message from a SOAP request response

Usage
getSoapRequestResult(xmlObj)

Arguments
xmlObj object of class "XMLInternalDocument" derived from XML package

Value
an object of class "XMLInternalDocument" derived from XML package

Warning
getSoapRequestResult is a function used internally by readSDMX

Author(s)
Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

See Also
SDMX-class readSDMX

getStructureType-methods

getStructureType

Description
Access the subtype of SDMXStructureType object

Usage
getStructureType(obj)

Arguments
obj An object deriving from class "SDMXStructureType"
Value

an object of class "character"

Methods

obj An object deriving from class "SDMXStructureType"

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

See Also

SDMXStructureType-class

isRegistryInterfaceEnvelope

Description

function used to detect if the XML document corresponds to a registry interface query

Usage

isRegistryInterfaceEnvelope(xmlObj, nativeRoot)

Arguments

xmlObj object of class "XMLInternalDocument derived from XML package

nativeRoot object of class "logical" indicating if it is the native document

Value

an object of class "logical"

Warning

isRegistryInterfaceEnvelope is a function used internally by readSDMX

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

See Also

SDMX-class readSDMX
### isSoapRequestEnvelope

**Description**

Function used to detect if the XML document corresponds to a SOAP request response

**Usage**

```r
isSoapRequestEnvelope(xmlObj, namespaces)
```

**Arguments**

- `xmlObj`: object of class "XMLInternalDocument" derived from XML package
- `namespaces`: object of class "data.frame" given the list of namespace URIs

**Value**

An object of class "logical"

**Warning**

`isSoapRequestEnvelope` is a function used internally by `readSDMX`

**Author(s)**

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

**See Also**

- `SDMX-class`
- `readSDMX`

---

### namespaces.SDMX

**Description**

Function used to get the namespaces handled by an SDMX-ML object

**Usage**

```r
namespaces.SDMX(xmlObj)
```

**Arguments**

- `xmlObj`: an object of class "XMLInternalDocument"
Value

an object of class "data.frame" giving the namespace(s) id and uri

Warning

namespaces.SDMX is a function used internally to get the namespaces of the SDMX-ML object through getNamespaces. This last function is used an utility re-used in the different SDMX document parsers.

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

See Also

SDMXType-class getNamespaces

Description

readSDMX is the main function to use to read SDMX data

Usage

readSDMX(file = NULL, isURL = TRUE, isRData = FALSE,
provider = NULL, providerId = NULL, providerKey = NULL,
agencyId = NULL, resource = NULL, resourceId = NULL, version = NULL,
flowRef = NULL, key = NULL, key.mode = "R", start = NULL, end = NULL, dsd = FALSE,
headers = list(), validate = FALSE,
verbose = !is.null(logger), logger = "INFO", ...)

Arguments

file path to SDMX-ML document that needs to be parsed
isURL a value of class "logical" either the path is an url, and data has to be downloaded from a SDMXweb-repository. Default value is TRUE. Ignored in case readSDMX is used with helpers (based on the embedded list of SDMXServiceProvider)
isRData a value of class "logical" either the path is local RData file handling an object of class "SDMX", previously saved with saveSDMX. Default value is FALSE.
provider an object of class "SDMXServiceProvider". If specified, file and isURL arguments will be ignored.
providerId an object of class "character" representing a provider id. It has to be match a default provider as listed in getSDMXServiceProviders()
providerKey: an object of class "character" giving a key to authenticate for the given provider endpoint. Some providers may require an authentication or subscription key to perform SDMX requests.

agencyId: an object of class "character" representing an agency id, for which data should be requested (from a particular service provider)

resource: an object of class "character" giving the SDMX service request resource to query, e.g., "data". Recognized if a valid provider or provide id has been specified as argument.

resourceId: an object of class "character" giving a SDMX service resource Id, e.g., the id of a data structure

version: an object of class "character" giving a SDMX resource version, e.g., the version of a dataflow.

flowRef: an object of class "character" giving the SDMX flow ref id. Recognized if valid provider or provide id has been specified as argument.

key: an object of class "character" or "list" giving the SDMX data key/filter to apply. Recognized if a valid provider or provide id has been specified as argument. If key.mode is equal to "R" (default value), filter has to be an object of class "list" representing the filters to apply to the dataset, otherwise the filter will be a string.

key.mode: an object of class "character" indicating if the key has to be provided as an R object, i.e., an object of class "list" representing the filter(s) to apply. Default value is "R". Alternative value is "SDMX".

start: an object of class "integer" or "character" giving the SDMX start time to apply. Recognized if a valid provider or provide id has been specified as argument.

derive: an object of class "integer" or "character" giving the SDMX end time to apply. Recognized if a valid provider or provide id has been specified as argument.

dsd: an Object of class "logical" if an attempt to inherit the DSD should be performed. Active only if "readSDMX" is used as helper method (i.e., if data is fetched using an embedded service provider. Default is FALSE.

headers: an object of class "list" that contains any additional headers for the request.

validate: an object of class "logical" indicating if a validation check has to be performed on the SDMX-ML document to check its SDMX compliance when reading it. Default is FALSE.

verbose: an Object of class "logical" that indicates if rsdmx logs should appear to user. Default is set to FALSE (see argument logger).

logger: reports if a logger has to be used to print log messages. Default is NULL (no logs). Use "INFO" to print rsdmx logs, and "DEBUG" to print verbose messages from SDMX web requests.

Value: an object of class "SDMX"

Author(s): Emmanuel Blondel, <emmanuel.blondel1@gmail.com>
Examples

# SDMX datasets
#-----------------
## Not run:
# Not run
# (local dataset examples)
#with SDMX 2.0
tmp <- system.file("extdata", "Example_Eurostat_2.0.xml", package="rsdmx")
sdmx <- readSDMX(tmp, isURL = FALSE)
stats <- as.data.frame(sdmx)
head(stats)

#with SDMX 2.1
tmpnew <- system.file("extdata", "Example_Eurostat_2.1.xml", package="rsdmx")
sdmx <- readSDMX(tmpnew, isURL = FALSE)
stats <- as.data.frame(sdmx)
head(stats)
## End(**Not run**)
dsd <- readSDMX(providerId = "OECD", resource = "datastructure", resourceId = "WATER_ABSTRACT")

# get codelists from DSD
cls <- slot(dsd, "codelists")
codelists <- sapply(slot(cls,"codelists"), slot, "id") # get list of codelists

# get a codelist
codelist <- as.data.frame(cls, codelistId = "CL_WATER_ABSTRACT_SOURCE")

# get concepts from DSD
concepts <- as.data.frame(slot(dsd, "concepts"))

## End(**Not run**)  
## End(Not run)

---

rsdmx

**Tools for Reading SDMX Data and Metadata**

---

**Description**

RSQDMX is a package to parse/read SDMX documents in R. It provides:  
- a set of classes and methods to read data and metadata documents exchanged through the Statistical Data and Metadata Exchange (SDMX) framework. The package currently focuses on the SDMX XML standard format (SDMX-ML).  
- a web-service interface to well-known SDMX data providers

**Author(s)**

Emmanuel Blondel <emmanuel.blondel1@gmail.com>

---

rsdmxLogger

**Description**

rsdmxLogger

**Format**

*R6Class* object.

**Value**

Object of *R6Class* for modelling a simple logger.
Abstract Methods

INFO(text) Logger to report information. Used internally
WARN(text) Logger to report warnings. Used internally
ERROR(text) Logger to report errors. Used internally

Note

Logger class used internally by rsdmx

Description

saveSDMX is the function to save R SDMX object

Usage

saveSDMX(sdmxObj, file)

Arguments

sdmxObj an object of class SDMX-class to save
file a connection or the name of the file where the R object is saved to

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

Examples

sdmx <- system.file("extdata","Example_Eurostat_2.0.xml", package="rsdmx")
saveSDMX(sdmx, "sdmx.rda")
**SDMX**  

Class "SDMX"

---

**Description**

An abstract class from which SDMX classes are derived

**Usage**

```r
SDMX(xmlObj, namespaces)
```

**Arguments**

- `xmlObj` object of class "XMLInternalDocument" derived from XML package
- `namespaces` object of class "data.frame" given the list of namespace URIs

**Value**

an object of class "SDMX"

**Slots**

- `xmlObj` Object of class "XMLInternalDocument" derived from XML package
- `schema` Object of class "SDMXSchema", handles the version of SDMX-ML format
- `header` Object of class "SDMXHeader", handles the SDMX-ML document header
- `footer` Object of class "SDMXFooter", handles the SDMX-ML document footer

**Warning**

This class is not useful in itself, but all SDMX classes in this package derive from it.

**Note**

Currently, the approach drafted in rsdmx package was to rely on XML package, read the xml object and store it as part of the SDMX R object. Another approach being investigated is to use XML handlers through the Simple API for XML (SAX) that could avoid to load the full XML tree in the SDMX R object (xmlObj). Indeed, SDMX data could be huge and causes issues of memory if the complete XML tree is loaded in the R user session.

@author Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

- `readSDMX`
**SDMXAgency**

**Class “SDMXAgency”**

**Description**

A basic class to handle a SDMX Concept

**Usage**

```r
SDMXAgency(xmlObj, namespaces)
```

**Arguments**

- `xmlObj`: object of class "XMLInternalDocument" derived from XML package
- `namespaces`: object of class "data.frame" given the list of namespace URIs

**Value**

an object of class "SDMXAgency"

**Author(s)**

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

**See Also**

readSDMX

---

**SDMXAgencyScheme**

**Class “SDMXAgencyScheme”**

**Description**

A basic abstract class to handle a SDMXAgencyScheme

**Usage**

```r
SDMXAgencyScheme(xmlObj, namespaces)
```

**Arguments**

- `xmlObj`: object of class "XMLInternalDocument" derived from XML package
- `namespaces`: object of class "data.frame" given the list of namespace URIs
Value

an object of class "SDMXAgencyScheme"

Slots

id Object of class "character" giving the ID of the concept scheme (required)
agencyID Object of class "character" giving the AgencyID
version Object of class "character" giving the version
uri Object of class "character" giving the concept uri
urn Object of class "character" giving the concept urn
isExternalReference Object of class "logical" indicating if the concept scheme is an external reference
isFinal Object of class "logical" indicating if the concept scheme is final
validFrom Object of class "character" indicating the start validity period
validTo Object of class "character" indicating the end validity period
Name Object of class "list" giving the agency scheme name (by language) - required
Description Object of class "list" giving the agency scheme description (by language)
agencies object of class "list" giving the list of SDMXAgency

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

See Also

readSDMX
Value

an object of class "SDMXAttribute"

Slots

conceptRef  Object of class "character" giving the attribute conceptRef (required)
conceptVersion Object of class "character" giving the attribute concept version
conceptAgency Object of class "character" giving the attribute concept agency
conceptSchemeRef  Object of class "character" giving the attribute conceptScheme ref
conceptSchemeAgency Object of class "character" giving the attribute conceptScheme agency
codelist Object of class "character" giving the codelist ref name
codelistVersion Object of class "character" giving the codelist ref version
codelistAgency Object of class "character" giving the codelist ref agency
attachmentLevel Object of class "character" giving the attachment level (e.g. DataSet)
assignmentStatus Object of class "character" giving the assignment status (e.g. Mandatory)
isTimeFormat Object of class "logical"
crossSectionalAttachDataset Object of class "logical"
crossSectionalAttachGroup Object of class "logical"
crossSectionalAttachSection Object of class "logical"
crossSectionalAttachObservation Object of class "logical"
isEntityAttribute Object of class "logical" indicating if the Attribute is an entity Attribute.
  Default value is FALSE
isNonObservationTimeAttribute Object of class "logical" indicating if the Attribute is a non-
  observation Attribute. Default value is FALSE
isCountAttribute Object of class "logical" indicating if the Attribute is a count Attribute. Default
  value is FALSE
isFrequencyAttribute Object of class "logical" indicating if the Attribute is a frequency At-
  tribute. Default value is FALSE
isIdentityAttribute Object of class "logical" indicating if the Attribute is an identity Attribute.
  Default value is FALSE

Warning

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when
parsing an SDMX-ML document (DataStructures, or DataStructureDefinitions)

readSDMX
Description
A basic class to handle a SDMX Code

Usage
SDMXCode(xmlObj, namespaces)

Arguments
xmlObj object of class "XMLInternalDocument derived from XML package
namespaces object of class "data.frame" given the list of namespace URIs

Value
an object of class "SDMXCode"

Slots
id Object of class "character" giving the ID of the code (required). In SDMX 2.0 documents, this
slot will handle the 'value' attribute
urn Object of class "character" giving the code urn
parentCode Object of class "character" giving the parent code
label Object of class "list" giving the code label (by language). In SDMX 2.0, it takes the code
'Description' element vs. 'Name' element in SDMX 2.1. This property deprecated and kept
now for backward compatibility.
name Object of class "list" giving the code name (by language).
description Object of class "list" giving the code description (by language).

Warning
This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when
parsing an SDMX-ML document (Codelists, or DataStructureDefinition)

Author(s)
Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

SDMXCodelist

Class “SDMXCodelist”

Description
A basic class to handle a SDMX Codelist

Usage
SDMXCodelist(xmlObj, namespaces)

Arguments
xmlObj object of class "XMLInternalDocument derived from XML package
namespaces object of class "data.frame" given the list of namespace URIs

Value
an object of class "SDMXCodelist"

Slots
id Object of class "character" giving the ID of the codelist (required)
agencyID Object of class "character" giving the AgencyID
version Object of class "character" giving the version
uri Object of class "character" giving the codelist uri
urn Object of class "character" giving the codelist urn
isExternalReference Object of class "logical" indicating if the codelist is an external reference
isFinal Object of class "logical" indicating if the codelist is final
validFrom Object of class "character" indicating the start validity period
validTo Object of class "character" indicating the end validity period
Name Object of class "list" giving the codelist (by language) - required
Description Object of class "list" giving the codelist description (by language)
Code Object of class "list" giving the list of "SDMXCode" objects included in the codelist (see SDMXCode)

Warning
This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document (Codelists, or DataStructureDefinition)

Author(s)

SDMXCodelists Class "SDMXCodelists"

Description

A basic class to handle SDMX Codelists

Usage

SDMXCodelists(xmlObj, namespaces)

Arguments

xmlObj object of class "XMLInternalDocument derived from XML package"

namespaces object of class "data.frame" given the list of namespace URIs

Value

an object of class "SDMXCodelists"

Slots

codelists Object of class "list" giving the list of "SDMXCodelist"

Warning

This class is not useful in itself, but SDMXDataStructureDefinition objects will encapsulate it as slot, when parsing an SDMX-ML document.

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

### SDMXCompactData

**Class “SDMXCompactData”**

**Description**

A basic class to handle a SDMX-ML compact data set

**Usage**

```r
SDMXCompactData(xmlObj, namespaces)
```

**Arguments**

- `xmlObj` object of class "XMLInternalDocument derived from XML package
- `namespaces` object of class "data.frame" given the list of namespace URIs

**Value**

an object of class "SDMXCompactData"

**Author(s)**

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

**See Also**

readSDMX

### SDMXComponents

**Class “SDMXComponents”**

**Description**

A basic class to handle SDMX Components

**Usage**

```r
SDMXComponents(xmlObj, namespaces)
```

**Arguments**

- `xmlObj` object of class "XMLInternalDocument derived from XML package
- `namespaces` object of class "data.frame" given the list of namespace URIs
Value

an object of class "SDMXComponents"

Slots

Dimensions Object of class "list" giving the list of dimensions (see SDMXDimension)
TimeDimension Object of class "SDMXTimeDimension"
PrimaryMeasure Object of class "SDMXPrimaryMeasure"
Attributes Object of class "list" giving the list of attributes (see SDMXAttribute)

Warning

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document (DataStructures, or DataStructureDefinitions)

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

SDMXConcept Class "SDMXConcept"

Description

A basic class to handle a SDMX Concept

Usage

SDMXConcept(xmlObj, namespaces)

Arguments

xmlObj object of class "XMLInternalDocument derived from XML package
namespaces object of class "data.frame" given the list of namespace URIs

Value

an object of class "SDMXConcept"
Slots

- id: Object of class "character" giving the ID of the concept (required)
- agencyID: Object of class "character" giving the AgencyID
- version: Object of class "character" giving the concept version
- uri: Object of class "character" giving the concept uri
- urn: Object of class "character" giving the concept urn
- isExternalReference: Object of class "logical" indicating if the concept is an external reference
- coreRepresentation: Object of class "character" giving the core representation
- coreRepresentationAgency: Object of class "character" giving the core representation agency
- parent: Object of class "character" giving the concept parent
- parentAgency: Object of class "character" giving the parentAgency
- Name: Object of class "list" giving the concept name (by language) - required
- Description: Object of class "list" giving the concept description (by language)

Warning

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document (Concepts, or DataStructureDefinition)

**SDMXConcepts**

*Class "SDMXConcepts"*

Description

A basic class to handle SDMX Concepts

Usage

SDMXConcepts(xmlObj, namespaces)

Arguments

- xmlObj: object of class "XMLInternalDocument derived from XML package"
- namespaces: object of class "data.frame" given the list of namespace URIs
Value
an object of class "SDMXConcepts"

Slots

concepts Object of class "list" giving the list of "SDMXConcept". This slot is available to ensure backward compatibility with SDMX 1.0 in SDMX 2.0 or 2.1 documents

conceptSchemes Object of class "list" giving the list of "SDMXConceptScheme", which will encapsulate the list of "SDMXConcept" (defined from SDMX 2.0)

Warning
This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document (Concepts, or DataStructureDefinition)

Author(s)
Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

Slots

- **id**: Object of class "character" giving the ID of the concept scheme (required)
- **agencyID**: Object of class "character" giving the AgencyID
- **version**: Object of class "character" giving the version
- **uri**: Object of class "character" giving the concept uri
- **urn**: Object of class "character" giving the concept urn
- **isExternalReference**: Object of class "logical" indicating if the concept scheme is an external reference
- **isFinal**: Object of class "logical" indicating if the concept scheme is final
- **validFrom**: Object of class "character" indicating the start validity period
- **validTo**: Object of class "character" indicating the end validity period
- **Name**: Object of class "list" giving the concept scheme name (by language) - required
- **Description**: Object of class "list" giving the concept scheme description (by language)
- **Concept**: Object of class "list" giving the list of "SDMXConcept" objects (see SDMXConcept)

**SDMXCrossSectionalData**

*Class "SDMXCrossSectionalData"*

**Description**

A basic class to handle a SDMX-ML cross sectional data set

**Usage**

`SDMXCrossSectionalData(xmlObj, namespaces)`

**Arguments**

- **xmlObj**: object of class "XMLInternalDocument derived from XML package"
- **namespaces**: object of class "data.frame" given the list of namespace URIs
SDMXData

Value
an object of class "SDMXCrossSectionalData"

Author(s)
Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

SDMXData
Class "SDMXData"

Description
An abstract class from which SDMX Data classes are derived

Usage
SDMXData(xmlObj, namespaces)

Arguments
xmlObj object of class "XMLInternalDocument derived from XML package
namespaces object of class "data.frame" given the list of namespace URIs

Value
an object of class "SDMXData"

Slots
dsdRef Object of class "character" giving the DSD Reference
dsd Object of class "SDMXDataStructureDefinition"

Warning
This class is not useful in itself, but all SDMX Data classes in this package derive from it.

Description

A basic class to handle a SDMX DataFlow

Usage

SDMXDataFlow(xmlObj, namespaces)

Arguments

xmlObj object of class "XMLInternalDocument derived from XML package"

namespaces object of class "data.frame" given the list of namespace URIs

Value

an object of class "SDMXDataFlow"

Slots

id Object of class "character" giving the ID (required)

agencyID Object of class "character" giving the AgencyID

version Object of class "character" giving the version

uri Object of class "character" giving the uri

urn Object of class "character" giving the urn

isExternalReference Object of class "logical" indicating if the dataflow is an external reference

isFinal Object of class "logical" indicating if the dataflow is final

validFrom Object of class "character" indicating the start validity period

validTo Object of class "character" indicating the end validity period

Name Object of class "list" giving the dataflow (by available language) - required

Description Object of class "list" giving the dataflow description (by available language)

dsdRef Object of class "character" giving the reference datastructure Id

dsd Object of class "SDMXDataStructureDefinition"

Warning

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document (Concepts, or DataStructureDefinition)

**SDMXDataStructure**  
*Class "SDMXDataStructure"*

**Description**  
A basic class to handle a SDMX DataStructure (or KeyFamily)

**Usage**  

```r
SDMXDataStructure(xmlObj, namespaces)
```

**Arguments**  

- `xmlObj`: object of class "XMLInternalDocument" derived from XML package
- `namespaces`: object of class "data.frame" given the list of namespace URIs

**Value**  

an object of class "SDMXDataStructure"

**Slots**  

- `id`: Object of class "character" giving the ID (required)
- `agencyID`: Object of class "character" giving the AgencyID
- `version`: Object of class "character" giving the version
- `uri`: Object of class "character" giving the uri
- `urn`: Object of class "character" giving the urn
- `isExternalReference`: Object of class "logical" indicating if the datastructure / keyfamily is an external reference
- `isFinal`: Object of class "logical" indicating if the datastructure / keyfamily is final
- `validFrom`: Object of class "character" indicating the start validity period
- `validTo`: Object of class "character" indicating the end validity period
- `Name`: Object of class "list" giving the codelist (by language) - required
- `Description`: Object of class "list" giving the codelist description (by language)
- `Components`: Object of class "SDMXComponents" (see SDMXComponents)

**Warning**  
This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document (Concepts, or DataStructureDefinition)

**Author(s)**  
Emmanuel Blondel, <emmanuel.blondel1@gmail.com>
**SDMXDataStructureDefinition**

*Class "SDMXDataStructureDefinition"*

**Description**
A basic class to handle a SDMX DataStructureDefinition (DSD)

**Usage**

```
SDMXDataStructureDefinition(xmlObj, namespaces)
```

**Arguments**

- `xmlObj` object of class "XMLInternalDocument derived from XML package"
- `namespaces` object of class "data.frame" given the list of namespace URIs

**Value**

an object of class "SDMXDataStructureDefinition"

**Slots**

- `organisationSchemes` Object of class "SDMXOrganisationSchemes" giving the list of agencies (see SDMXAgencyScheme and SDMXAgency)
- `concepts` Object of class "SDMXConcepts" giving the list of concepts or conceptSchemes (see SDMXConcepts)
- `codelists` Object of class "SDMXCodelists" giving the list of codelists (see SDMXCodelists)
- `datastructures` Object of class "SDMXDataStructures" giving the list of datastructures /key families (see SDMXDataStructures)

**Warning**

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document (Concepts, or DataStructureDefinition)

SDMXDataStructures Class "SDMXDataStructures"

Description

A basic class to handle a SDMX DataStructures (or KeyFamilies)

Usage

SDMXDataStructures(xmlObj, namespaces)

Arguments

xmlObj object of class "XMLInternalDocument derived from XML package"

namespaces object of class "data.frame" given the list of namespace URIs

Value

an object of class "SDMXDataStructures"

Slots

datastructures Object of class "list" giving the list of DataStructures, (see SDMXDataStructure)

Warning

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document (Concepts, or DataStructureDefinition)

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

SDMXDimension

Class "SDMXDimension"

Description
A basic class to handle a SDMX Dimension

Usage
SDMXDimension(xmlObj, namespaces)

Arguments

xmlObj
object of class "XMLInternalDocument" derived from XML package

namespaces
object of class "data.frame" given the list of namespace URIs

Value

an object of class "SDMXDimension"

Slots

conceptRef Object of class "character" giving the dimension conceptRef (required)

conceptVersion Object of class "character" giving the dimension concept version

conceptAgency Object of class "character" giving the dimension concept agency

conceptSchemeRef Object of class "character" giving the dimension conceptScheme ref

conceptSchemeAgency Object of class "character" giving the dimension conceptScheme agency

codelist Object of class "character" giving the codelist ref name

codelistVersion Object of class "character" giving the codelist ref version

codelistAgency Object of class "character" giving the codelist ref agency

isMeasureDimension Object of class "logical" indicating if the dimension is a measure dimension. Default value is FALSE

isFrequencyDimension Object of class "logical" indicating if the dimension is a frequency dimension. Default value is FALSE

isEntityDimension Object of class "logical" indicating if the dimension is an entity dimension. Default value is FALSE

isCountDimension Object of class "logical" indicating if the dimension is a count dimension. Default value is FALSE

isNonObservationTimeDimension Object of class "logical" indicating if the dimension is a non-observation dimension. Default value is FALSE

isIdentityDimension Object of class "logical" indicating if the dimension is an identity dimension. Default value is FALSE

crossSectionalAttachDataset Object of class "logical"
crossSectionalAttachGroup  Object of class "logical"
crossSectionalAttachSection  Object of class "logical"
crossSectionalAttachObservation  Object of class "logical"

Warning
This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document (Concepts, or DataStructureDefinition)

SDMXDotStatRequestBuilder

Class "SDMXDotStatRequestBuilder"

Description
A experimental class to handle a SDMX DotStat (*.Stat) service request builder

Usage
SDMXDotStatRequestBuilder(regUrl, repoUrl, accessKey = NULL,
unsupportedResources = list(), skipProviderId = FALSE, forceProviderId = FALSE,
headers = list())

Arguments
regUrl an object of class "character" giving the base Url of the SDMX service registry
repoUrl an object of class "character" giving the base Url of the SDMX service repository
accessKey an object of class "character" indicating the name of request parameter for which an authentication or subscription user key (token) has to be provided to perform requests
unsupportedResources an object of class "list" giving eventual unsupported REST resources. Default is an empty list object
skipProviderId an object of class "logical" indicating that the provider agencyId should be skipped. Used to control lack of strong SDMX REST compliance from data providers. For now, it applies only for the "data" resource.
forceProviderId

an object of class "logical" indicating if the provider agencyId has to be added at the end of the request. Default value is FALSE. For some providers, the all value for the provider agency id is not allowed, in this case, the agencyId of the data provider has to be forced in the web-request

headers

an object of class "list" that contains any additional headers for the request.

Slots

regUrl an object of class "character" giving the base Url of the SDMX service registry
repoUrl an object of class "character" giving the base Url of the SDMX service repository
accessKey an object of class "character" indicating the name of request parameter for which an authentication or subscription user key/token has to be provided to perform requests
compliant an object of class "logical" indicating if the request builder is somehow compliant with a service specification

Warning

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document.

Note

Internal class
dataflow' resource (path="GetKeyFamily/resourceID") datastructure' resource (path="GetDataStructure/resourceID/agencyI") data' resource (path="GetData/flowRef/key/agencyId")

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

SDMXFooter

Class "SDMXFooter"

Description

A basic class to handle the footer of a SDMX-ML document

Usage

SDMXFooter(xmlObj, namespaces)

Arguments

xmlObj object of class "XMLInternalDocument derived from XML package
namespaces object of class "data.frame" given the list of namespace URIs
**Value**

an object of class "SDMXFooter"

**Slots**

messages  Object of class "SDMXFooterMessage" giving the list of messages

**Warning**

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document.

**Note**

This class is especially useful for SDMX 2.1 compliant documents. Footer messages are not supported in SDMX 2.0 standard format. In this case, the footer will return an empty message list().

According to the SDMX 2.1 standard, the message severity takes one of the following values: "Error", "Warning", "Information". Given the possible typos handled by data providers, rsdmx adopts a permissive strategy and does not validate the object according to such controlled terms.

**Author(s)**

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

**SDMXFooterMessage**  
*Class "SDMXFooterMessage"*

**Description**

A basic class to handle a footer message of a SDMX-ML document

**Usage**

SDMXFooterMessage(xmlObj)

**Arguments**

xmlObj  object of class "XMLInternalDocument derived from XML package"

**Value**

an object of class "SDMXFooterMessage"
Slots

code Object of class "character" giving the status code
severity Object of class "character" giving the severity of the message
messages Object of class "list" giving the list of messages

Warning

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document.

Note

This class is especially useful for SDMX 2.1 compliant documents. Footer messages are not supported in SDMX 2.0 standard format.

According to the SDMX 2.1 standard, the message severity takes one of the following values: "Error", "Warning", "Information". Given the possible typos handled by data providers, rsdmx adopts a permissive strategy and does not validate the object according to such controlled terms.

SDMXGenericData Class "SDMXGenericData"

Description

A basic class to handle a SDMX-ML Generic data set

Usage

SDMXGenericData(xmlObj, namespaces)

Arguments

xmlObj object of class "XMLInternalDocument" derived from XML package
namespaces object of class "data.frame" given the list of namespace URIs

Value

an object of class "SDMXGenericData"
Warning

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document.

SDMXHeader

Class "SDMXHeader"

Description

A basic class to handle the header of a SDMX-ML document

Usage

SDMXHeader(xmlObj, namespaces)

Arguments

xmlObj object of class "XMLInternalDocument" derived from XML package
namespaces object of class "data.frame" given the list of namespace URIs

Value

an object of class "SDMXHeader"

Slots

ID Object of class "character" giving the ID of the SDMX-ML document
Test Object of class "logical" indicating if the SDMX-ML document is disseminated for test purpose
Truncated Object of class "logical" indicating if the SDMX-ML document is truncated
Name Object of class "character" giving the name of SDMX-ML document
Sender Object of class "list" giving the id of the sender and eventually its in name, possibly in multi-languages
Receiver Object of class "list" giving the id of the receiver and eventually its in name, possibly in multi-languages
Prepared Object of class "POSIXlt" giving the preparation date of the SDMX-ML document
Extracted Object of class "POSIXlt" giving the extraction date of the SDMX-ML document
SDMXItemScheme

ReportingBegin  Object of class "POSIXlt" giving the reporting begin date for the data retrieved in the SDMX-ML document
ReportingEnd   Object of class "POSIXlt" giving the reporting end date for the data retrieved in the SDMX-ML document
Source        Object of class "character" giving the source of the SDMX-ML document

Warning
This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document

Note
Some SDMXHeader properties are not yet supported and thus not available as "slots". These are "KeyFamilyRef", "KeyFamilyAgency", "DataSetAgency", "DataSetID", "DataSetAction".

**SDMXOrganisation**  
*Class "SDMXOrganisation"*

**Description**  
A basic class to handle a SDMX Concept

**Usage**  
```
SDMXOrganisation(xmlObj, namespaces)
```
**Arguments**

- `xmlObj` object of class "XMLInternalDocument" derived from XML package
- `namespaces` object of class "data.frame" given the list of namespace URIs

**Value**

an object of class "SDMXOrganisation"

**Slots**

- `id` Object of class "character" giving the ID of the concept (required)
- `uri` Object of class "character" giving the concept uri
- `urn` Object of class "character" giving the concept urn
- `Name` Object of class "list" giving the organisation name (by language) - required
- `Description` Object of class "list" giving the organisation description (by language)

**Warning**

This class is not useful in itself, but other classes such as `SDMXAgency` will implement it.

**SDMXOrganisationScheme**

*Class "SDMXOrganisationScheme"*

**Description**

A basic abstract class to handle a SDMXOrganisationScheme

**Information**

This class is implemented in both SDMX 2.0 and 2.1. In the latter, it is extended by other specific classes such as `AgencyScheme`, `DataConsumerScheme`, `DataProviderScheme` and `OrganisationUnitScheme`. `rsdmx` covers the support in SDMX 2.1

**Author(s)**

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>
SDMXOrganisationSchemes

Class "SDMXOrganisationSchemes"

Description
A basic class to handle a SDMX OrganisationSchemes

Usage
SDMXOrganisationSchemes(xmlObj, namespaces)

Arguments
xmlObj object of class "XMLInternalDocument" derived from XML package
namespaces object of class "data.frame" given the list of namespace URIs

Value
an object of class "OrganisationSchemes"

Slots
organisationSchemes Object of class "list" giving the list of SDMXAgencyScheme

Warning
This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document

Author(s)
Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

SDMXPrimaryMeasure  

Class "SDMXPrimaryMeasure"

Description
A basic class to handle a SDMX PrimaryMeasure

Usage
SDMXPrimaryMeasure(xmlObj, namespaces)

Arguments
xmlObj object of class "XMLInternalDocument" derived from XML package
namespaces object of class "data.frame" given the list of namespace URIs

Value
an object of class "SDMXPrimaryMeasure"

Slots
conceptRef Object of class "character" giving the dimension conceptRef (required)
conceptVersion Object of class "character" giving the dimension concept version
conceptAgency Object of class "character" giving the dimension concept agency
conceptSchemeRef Object of class "character" giving the dimension conceptScheme ref
conceptSchemeAgency Object of class "character" giving the dimension conceptScheme agency
codelist Object of class "character" giving the codelist ref name
codelistVersion Object of class "character" giving the codelist ref version
codelistAgency Object of class "character" giving the codelist ref agency

Warning
This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document.

**SDMXRequestBuilder**

Class "SDMXRequestBuilder"

**Description**

A basic class to handle a SDMX service request builder

**Usage**

```r
SDMXRequestBuilder(regUrl, repoUrl, accessKey = NULL,
                   formatter, handler, compliant, unsupportedResources = list(),
                   headers = list())
```

**Arguments**

- **regUrl**: an object of class "character" giving the base Url of the SDMX service registry
- **repoUrl**: an object of class "character" giving the base Url of the SDMX service repository
- **accessKey**: an object of class "character" indicating the name of request parameter for which an authentication or subscription user key/token has to be provided to perform requests
- **formatter**: an object of class "list" giving a formatting function (for each resource) that takes an object of class "SDMXRequestParams" as single argument. Such parameter allows to customize eventual params (e.g. specific data provider rules)
- **handler**: an object of class "list" that will be in charge of build a web request.
- **compliant**: an object of class "logical" indicating if the request builder is somehow compliant with a service specification
- **unsupportedResources**: an object of class "list" giving one or more resources not supported by the Request builder for a given provider
- **headers**: an object of class "list" that contains any additional headers for the request.

**Details**

The `handler` function will list the resource methods. Each method will accept a single object of class `SDMXRequestParams` as argument. This object will give the different request params as slots (baseUrl, agencyId, resource, resourceIds, version, flowRef, key, start, end, compliant) to build the output (a string representing the web request to build).

The `rsdmx` package will as much as possible try to handler generic handlers. At now, the available embedded builders are: `SDMXREST20RequestBuilder` (connector for SDMX 2.0 web-services), `SDMXREST21RequestBuilder` (connector for SDMX 2.1 web-services), `SDMXDotStatRequestBuilder` (connector for SDMX .Stat web-services implementations)
Slots

regUrl  an object of class "character" giving the base Url of the SDMX service registry
repoUrl an object of class "character" giving the base Url of the SDMX service repository
accessKey an object of class "character" indicating the name of request parameter for which an
authentication or subscription user key/token has to be provided to perform requests
formatter an object of class "list" giving a formatting function (for each resource) that takes
an object of class "SDMXRequestParams" as single argument. Such parameter allows to
customize eventual params (e.g. specific data provider rules)
handler  an object of class "list" that will be in charge of build a web request.
compliant an object of class "logical" indicating if the request builder is somehow compliant with
a service specification
unsupportedResources an object of class "character" giving one or more resources not supported
by the Request builder for a given provider
headers  an object of class "list" that contains any additional headers for the request.

Warning

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when
parsing an SDMX-ML document (Concepts, or DataStructureDefinition)

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

Examples

#default formatter
myFormatter = list(
  dataflow = function(obj){
    #format some obj slots here
    return(obj)
  },
  datastructure = function(obj){
    #format some obj slots here
    return(obj)
  },
  data = function(obj){
    #format some obj slots here
    return(obj)
  }
)

#an handler
#where each element of the list is a function taking as argument an object
#of class "SDMXRequestParams"
myHandler <- list(
  "dataflow" = function(obj){return(obj@regUrl)},
  "datastructure" = function(obj){return(obj@regUrl)},
  "data" = function(obj){
    #format some obj slots here
    return(obj)
  }
)
"data" = function(obj){return(obj@repoUrl)}

#how to create a SDMXRequestBuilder
requestBuilder <- SDMXRequestBuilder(
  regUrl = "http://www.myorg.org/registry",
  repoUrl = "http://www.myorg.org/repository",
  accessKey = NULL,
  formatter = myFormatter, handler = myHandler, compliant = FALSE)

SDMXRequestParams

Description

A class to handle a SDMX service request params

Usage

SDMXRequestParams(regUrl, repoUrl, accessKey,
  providerId, agencyId, resource, resourceId, version,
  flowRef, key, start, end, compliant)

Arguments

regUrl an object of class "character" giving the base Url of the SDMX service registry
repoUrl an object of class "character" giving the base Url of the SDMX service repository
accessKey an object of class "character" giving the eventual authentication or subscription
  user key (or token) to provide in order to perform the SDMX request. This key
  may be mandatory for some service providers.
providerId an object of class "character" giving the provider agency id
agencyId an object of class "character" giving an agency id
resource an object of class "character" giving the type of resource to be queried
resourceId an object of class "character" giving the resource to be queried
version an object of class "character" giving the resource version
flowRef an object of class "character" giving the flowRef to be queried
key an object of class "character" giving the key (SDMX url formatted) to be used
  for the query
start an object of class "character" giving the start time
end an object of class "character" giving the end time
compliant an object of class "logical" indicating if the web-service is compliant with the
  SDMX REST web-service specifications
Slots

- `regUrl` an object of class "character" giving the base Url of the SDMX service registry
- `repoUrl` an object of class "character" giving the base Url of the SDMX service repository
- `accessKey` an object of class "character" indicating the name of request parameter for which an authentication or subscription user key/token has to be provided to perform requests
- `providerId` an object of class "character" giving the provider agency Id
- `agencyId` an object of class "character" giving an agency Id
- `resource` an object of class "character" giving the type of resource to be queried
- `resourceId` an object of class "character" giving the resource to be queried
- `version` an object of class "character" giving the resource version
- `flowRef` an object of class "character" giving the flowRef to be queried
- `key` an object of class "character" giving the key (SDMX url formatted) to be used for the query
- `start` an object of class "character" giving the start time
- `end` an object of class "character" giving the end time
- `compliant` an object of class "logical" indicating if the web-service is compliant with the SDMX REST web-service specifications

Warning

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document.

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

Examples

```r
#how to create a SDMXRequestParams object
params <- SDMXRequestParams(
  regUrl = "", repoUrl ="", accessKey = NULL,
  providerId = "", agencyId ="", resource = "data", resourceId = "",
  version = "", flowRef = ", key = NULL, start = NULL, end = NULL, compliant = FALSE
)
```
**SDMXREST20RequestBuilder**

*Class "SDMXREST20RequestBuilder"*

**Description**

A experimental class to handle a SDMX 2.0 service request builder

**Usage**

```r
SDMXREST20RequestBuilder(regUrl, repoUrl, accessKey = NULL, compliant, 
unsupportedResources = list(), skipProviderId = FALSE, forceProviderId = FALSE, 
headers = list())
```

**Arguments**

- **regUrl**: an object of class "character" giving the base Url of the SDMX service registry
- **repoUrl**: an object of class "character" giving the base Url of the SDMX service repository
- **accessKey**: an object of class "character" indicating the name of request parameter for which an authentication or subscription user key/token has to be provided to perform requests
- **compliant**: an object of class "logical" indicating if the web-service is compliant with the SDMX REST web-service specifications
- **unsupportedResources**: an object of class "list" giving eventual unsupported REST resources. Default is an empty list object
- **skipProviderId**: an object of class "logical" indicating that the provider agencyId should be skipped. Used to control lack of strong SDMX REST compliance from data providers. For now, it applies only for the "data" resource.
- **forceProviderId**: an object of class "logical" indicating if the provider agencyId has to be added at the end of the request. Default value is FALSE. For some providers, the all value for the provider agency id is not allowed, in this case, the agencyId of the data provider has to be forced in the web-request
- **headers**: an object of class "list" that contains any additional headers for the request.

**Slots**

- **regUrl**: an object of class "character" giving the base Url of the SDMX service registry
- **repoUrl**: an object of class "character" giving the base Url of the SDMX service repository
- **accessKey**: an object of class "character" indicating the name of request parameter for which an authentication or subscription user key/token has to be provided to perform requests
- **compliant**: an object of class "logical" indicating if the web-service is compliant with the SDMX REST web-service specifications
**Warning**

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document.

**Author(s)**

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

**Examples**

```r
#how to create a SDMXREST20RequestBuilder
requestBuilder <- SDMXREST20RequestBuilder(
  regUrl = "http://www.myorg/registry",
  repoUrl = "http://www.myorg/repository", compliant = FALSE)
```

**Description**

A experimental class to handle a SDMX 2.1 service request builder

**Usage**

```r
SDMXREST21RequestBuilder(regUrl, repoUrl, accessKey = NULL, compliant,
  unsupportedResources = list(), skipProviderId = FALSE, forceProviderId = FALSE,
  headers = list())
```

**Arguments**

- `regUrl`: an object of class "character" giving the base Url of the SDMX service registry
- `repoUrl`: an object of class "character" giving the base Url of the SDMX service repository
- `accessKey`: an object of class "character" indicating the name of request parameter for which an authentication or subscription user key/token has to be provided to perform requests
- `compliant`: an object of class "logical" indicating if the web-service is compliant with the SDMX REST web-service specifications
- `unsupportedResources`: an object of class "list" giving eventual unsupported REST resources. Default is an empty list object
- `skipProviderId`: an object of class "logical" indicating that the provider agencyId should be skipped. Used to control lack of strong SDMX REST compliance from data providers. For now, it applies only for the "data" resource.
forceProviderId

an object of class "logical" indicating if the provider agencyId has to be added at the end of the request. Default value is FALSE. For some providers, the all value for the provider agency id is not allowed, in this case, the agencyId of the data provider has to be forced in the web-request.

headers

an object of class "list" that contains any additional headers for the request.

Slots

regUrl an object of class "character" giving the base Url of the SDMX service registry
repoUrl an object of class "character" giving the base Url of the SDMX service repository
accessKey an object of class "character" indicating the name of request parameter for which an authentication or subscription user key/token has to be provided to perform requests
compliant an object of class "logical" indicating if the web-service is compliant with the SDMX REST web-service specifications

Warning

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document.

Author(s)

Emmanuel Blondel, emmanuel.blondel1@gmail.com

Examples

#how to create a SDMXREST21RequestBuilder
requestBuilder <- SDMXREST21RequestBuilder(
  regUrl = "http://www.myorg/registry",
  repoUrl = "http://www.myorg/repository",
  compliant = TRUE)

SDMXSchema

Class "SDMXSchema"

Description

A basic class to handle the version of the SDMX-ML Schema

Usage

SDMXSchema(xmlObj, namespaces)
SDMXServiceProvider

Arguments

xmlObj object of class "XMLInternalDocument derived from XML package
namespaces object of class "data.frame" given the list of namespace URIs

Value

an object of class "SDMXSchema"

Slots

version Object of class "character" giving the SDMX-ML schema version

Warning

this class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document.

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

readSDMX

SDMXServiceProvider Class "SDMXServiceProvider"

Description

A basic class to handle a SDMX service provider

Usage

SDMXServiceProvider(agencyId, name, scale, country, builder)

Arguments

agencyId an object of class "character" giving the a provider identifier
name an object of class "character" giving the name of the provider
scale an object of class "character" giving the scale of the datasource, either "international" or "national". Default value is "international".
country an object of class "character" giving the ISO 3-alpha code of the country (if scale is "national"). Default value is NA
builder an object of class "SDMXRequestBuilder" that will performs the web request building for this specific provider
Value

an object of class "SDMXServiceProvider"

Slots

agencyId an object of class "character" giving the a provider identifier
name an object of class "character" giving the name of the provider
scale an object of class "character" giving the scale of the datasource, either "international" or "national"
country an object of class "character" giving the ISO 3-alpha code of the country (if scale is "national")
builder an object of class "SDMXRequestBuilder" that will performs the web request building

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

Examples

#let's create a SDMXRESTRequestBuilder
#(assuming that "My Organization" implements SDMX REST web-services)
myBuilder <- SDMXREST20RequestBuilder(regUrl = "http://www.myorg.org/registry",
repourl = "http://www.myorg.org/repository",
compliant = TRUE)

#create a SDMXServiceProvider
provider <- SDMXServiceProvider(agencyId = "MYORG", name = "My Organization",
builder = myBuilder)
SDMXStructureSpecificData

Value

an object of class "SDMXServiceProviders"

Slots

* providers an object of class "list" (of SDMXServiceProvider) configured by default and/or at runtime in rsdmx

Warning

this class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document.

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

---

SDMXStructureSpecificData

* Class "SDMXStructureSpecificData"

Description

A basic class to handle a SDMX-ML StructureSpecificData data set

Usage

SDMXStructureSpecificData(xmlObj, namespaces)

Arguments

xmlObj object of class "XMLInternalDocument derived from XML package

namespaces object of class "data.frame" given the list of namespace URIs

Value

an object of class "SDMXStructureSpecificData"

Warning

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document.

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>
SDMXStructureSpecificTimeSeriesData

Class "SDMXStructureSpecificTimeSeriesData"

Description
A basic class to handle a SDMX-ML StructureSpecificTimeSeriesData data set

Usage
SDMXStructureSpecificTimeSeriesData(xmlObj, namespaces)

Arguments
xmlObj object of class "XMLInternalDocument" derived from XML package
namespaces object of class "data.frame" given the list of namespace URIs

Value
an object of class "SDMXStructureSpecificTimeSeriesData"

Warning
This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document.

Author(s)
Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

SDMXStructureType  

**Description**  
A basic class to handle the type of a SDMX-ML Structure document

**Usage**  
SDMXStructureType(xmlObj, namespaces, resource)

**Arguments**
- **xmlObj**: object of class "XMLInternalDocument derived from XML package"
- **namespaces**: object of class "data.frame" given the list of namespace URIs
- **resource**: object of class "character" giving the REST resource to be queried (required to distinguish between dataflows and datastructures in SDMX 2.0)

**Value**  
an object of class "SDMXStructureType"

**Warning**  
This class is not useful in itself, but it will be used by readSDMX to deal with SDMX-ML Structure documents.

**Author(s)**
Emmanuel Blondel, <emmanuel.blonde11@gmail.com>

**See Also**
readSDMX

---

SDMXTimeDimension  

**Description**  
A basic class to handle a SDMX TimeDimension

**Usage**  
SDMXTimeDimension(xmlObj, namespaces)

---
Arguments

xmlObj object of class "XMLInternalDocument derived from XML package
namespaces object of class "data.frame" given the list of namespace URIs

Value

an object of class "SDMXT TimeDimension"

Slots

conceptRef Object of class "character" giving the dimension conceptRef (required)
conceptVersion Object of class "character" giving the dimension concept version
conceptAgency Object of class "character" giving the dimension concept agency
conceptSchemeRef Object of class "character" giving the dimension conceptScheme ref
conceptSchemeAgency Object of class "character" giving the dimension conceptScheme agency
codelist Object of class "character" giving the codelist ref name
codelistVersion Object of class "character" giving the codelist ref version

codelistAgency Object of class "character" giving the codelist ref agency
crossSectionalAttachDataset Object of class "logical"
crossSectionalAttachGroup Object of class "logical"
crossSectionalAttachSection Object of class "logical"
crossSectionalAttachObservation Object of class "logical"

Warning

This class is not useful in itself, but non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document (Concepts, or DataStructureDefinition)

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

**SDMXTyp**

---

**Class "SDMXTyp"**

---

**Description**

A basic class to handle the type of a SDMX-ML document

**Usage**

SDMXTyp(xmlObj)

**Arguments**

xmlObj object of class "XMLInternalDocument derived from XML package"

**Value**

an object of class "SDMXTyp"

**Slots**

type Object of class "character" giving the type of the SDMX-ML document

**Warning**

this class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document.

**Note**

At now, the following types have been implemented and successfully tested: - StructureType. - GenericDataType. - CompactDataType. - StructureSpecificDataType. - CrossSectionalDataType. - UtilityDataType. - MessageGroupType

### SDMXUtilityData

**Class “SDMXUtilityData”**

**Description**

A basic class to handle a SDMX-ML UtilityData data set

**Usage**

`SDMXUtilityData(xmlObj, namespaces)`

**Arguments**

- **xmlObj**: object of class "XMLInternalDocument derived from XML package
- **namespaces**: object of class "data.frame" given the list of namespace URIs

**Value**

an object of class "SDMXUtilityData"

**Warning**

This class is not useful in itself, but all SDMX non-abstract classes will encapsulate it as slot, when parsing an SDMX-ML document.

**Author(s)**

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>

---

### setDSD

**setDSD**

**Description**

set the 'dsd' slot of a SDMXData object

**Usage**

`setDSD(obj, dsd)`

```r
## S4 method for signature 'SDMXData'
setDSD(obj, dsd)
```
Arguments

- **obj**: An object deriving from class "SDMXData"
- **dsd**: An object of class "SDMXDataStructureDefinition"

Value

the 'obj' object of class "SDMXData" enriched with the dsd

Methods (by class)

- `setDSD(SDMXData)`: set the 'dsd' slot of a SDMXData object

Author(s)

Emmanuel Blondel, <emmanuel.blondel1@gmail.com>
