Package ‘scatterD3’

Type Package
Title D3 JavaScript Scatterplot from R
Version 0.9.1
Date 2020-03-10
Maintainer Julien Barnier <julien.barnier@cnrs.fr>
Description Creates 'D3' 'JavaScript' scatterplots from 'R' with interactive
features : panning, zooming, tooltips, etc.
License GPL (>= 3)
VignetteBuilder knitr
Encoding UTF-8
LazyData TRUE
Enhances shiny
Imports htmlwidgets, digest, ellipse
Suggests knitr, rmarkdown
RoxygenNote 7.0.2
NeedsCompilation no

**R topics documented:**

- `scatterD3` .................................................. 2
- `scatterD3-shiny` ......................................... 6

---

**Description**

Generates an interactive scatter plot based on d3.js. Interactive features include zooming, panning, text labels moving, tooltips, fading effects in legend. Additional handlers are provided to change label size, point opacity or export the figure as an SVG file via HTML form controls.

**Usage**

```r
scatterD3( 
  x, 
  y, 
  data = NULL, 
  lab = NULL, 
  x_log = FALSE, 
  y_log = FALSE, 
  point_size = 64, 
  labels_size = 10, 
  labels_positions = NULL, 
  point_opacity = 1, 
  opacities = NULL, 
  hover_size = 1, 
  hover_opacity = NULL, 
  fixed = FALSE, 
  col_var = NULL, 
  col_continuous = NULL, 
  colors = NULL, 
  ellipses = FALSE, 
  ellipses_level = 0.95, 
  symbol_var = NULL, 
  symbols = NULL, 
  size_var = NULL, 
  size_range = c(10, 300), 
  sizes = NULL, 
  col_lab = NULL, 
  symbol_lab = NULL, 
  size_lab = NULL, 
  key_var = NULL, 
  type_var = NULL,
)```
opacity_var = NULL,
unit_circle = FALSE,
url_var = NULL,
tooltips = TRUE,
tooltip_text = NULL,
tooltip_position = "bottom right",
xlab = NULL,
ylab = NULL,
html_id = NULL,
width = NULL,
height = NULL,
legend_width = 150,
left_margin = 30,
xlim = NULL,
ylim = NULL,
dom_id_reset_zoom = "scatterD3-reset-zoom",
dom_id_svg_export = "scatterD3-svg-export",
dom_id_lasso_toggle = "scatterD3-lasso-toggle",
transitions = FALSE,
menu = TRUE,
lasso = FALSE,
lasso_callback = NULL,
click_callback = NULL,
init_callback = NULL,
zoom_callback = NULL,
zoom_on = NULL,
zoom_on_level = NULL,
disable_wheel = FALSE,
lines = data.frame(slope = c(0, Inf), intercept = c(0, 0), stroke_dasharray = c(5, 5)),
axes_font_size = "100%",
legend_font_size = "100%",
caption = NULL)
)

Arguments

x  numerical vector of x values, or variable name if data is not NULL
y  numerical vector of y values, or variable name if data is not NULL
data default dataset to use for plot.
lab optional character vector of text labels, or variable name if data is not NULL
x_log if TRUE, set x scale as logarithmic
y_log if TRUE, set y scale as logarithmic
point_size points size. Ignored if size_var is not NULL.
labels_size text labels size
labels_positions Either a data frame, as created by the "Export labels positions" menu entry, giving each label x and y position, or the value "auto" to use an automatic labeler.
point_opacity points opacity, as an integer (same opacity for all points).

opacities named list or named vector of opacities. Each opacity will be associated by their name within 'opacity_var'.

hover_size factor for changing size when hovering points

hover_opacity points opacity when hovering

fixed force a 1:1 aspect ratio

col_var optional vector for points color mapping, or variable name if data is not NULL

col_continuous specify if the color scale must be continuous. By default, if col_var is numeric, not a factor, and has more than 6 unique values, it is considered as continuous.

colors vector of custom points colors. Colors must be defined as an hexadecimal string (eg "#FF0000"). If colors is a named list or a named vector, then the colors will be associated with their name within col_var. For a continuous color scale, can be a string giving the interpolate function name from d3-scale-chromatic (for example, "interpolatePurples")

ellipses draw confidence ellipses for points or the different color mapping groups

ellipses_level confidence level for ellipses (0.95 by default)

symbol_var optional vector for points symbol mapping, or variable name if data is not NULL

symbols vector of custom points symbols. Symbols must be defined as character strings with the following possible values: "circle", "cross", "diamond", "square", "star", "triangle", and "wye". If symbols is a named list or a named vector, then the symbols will be associated with their name within symbol_var.

size_var optional vector for points size mapping, or variable name if data is not NULL

size_range numeric vector of length 2, giving the minimum and maximum point sizes when mapping with size_var

sizes named list or named vector of sizes. Each size will be associated by their name within 'size_var'.

col_lab color legend title. Set to NA to remove color legend entirely.

symbol_lab symbols legend title. Set to NA to remove symbol legend entirely.

size_lab size legend title. Set to NA to remove size legend entirely.

key_var optional vector of rows ids, or variable name if data is not NULL. This is passed as a key to d3, and is only added in shiny apps where displayed rows are filtered interactively.

type_var optional vector of points type: "point" for a dot (default), "arrow" for an arrow starting from the origin.

opacity_var optional vector of points opacity (values between 0 and 1)

unit_circle set tot TRUE to draw a unit circle

url_var optional vector of URLs to be opened when a point is clicked

tooltips logical value to display tooltips when hovering points

tooltip_text optional character vector of tooltips text

tooltip_position the tooltip position relative to its point. Must a combination of "top" or "bottom" with "left" or "right" (default is "bottom right").
xlab x axis label
ylab y axis label.
html_id manually specify an HTML id for the svg root node. A random one is generated by default.
width figure width, computed when displayed
height figure height, computed when displayed
legend_width legend area width, in pixels. Set to 0 to disable legend completely.
left_margin margin on the left of the plot, in pixels
xlim numeric vector of length 2, manual x axis limits
ylim numeric vector of length 2, manual y axis limits
don_id_reset_zoom HTML DOM id of the element to bind the "reset zoom" control to.
don_id_svg_export HTML DOM id of the element to bind the "svg export" control to.
don_id_lasso_toggle HTML DOM id of the element to bind the "toggle lasso" control to.
transitions if TRUE, data updates are displayed with smooth transitions, if FALSE the whole chart is redrawn. Only used within shiny apps.
menu whether to display the tools menu (gear icon)
lasso logical value to add https://github.com/skokenes/D3-Lasso-Plugind3-lasso-plugin feature
lasso_callback the body of a JavaScript callback function with the argument sel to be applied to a lasso plugin selection
click_callback the body of a JavaScript callback function whose inputs are html_id, and the index of the clicked element.
init_callback the body of a JavaScript callback function applied to the scatter object at init time.
zoom_callback the body of a JavaScript callback function whose inputs are the new xmin, xmax, ymin and ymax after a zoom action is triggered.
zoom_on coordinates where to center zoom on plot draw or update.
zoom_on_level zoom level on plot draw or update. Ignored if ‘zoom_on’ is NULL.
disable_wheel if TRUE, disable zooming with mousewheel.
lines a data frame with at least the slope and intercept columns, and as many rows as lines to add to scatterplot. Style can be added with stroke, stroke_width and stroke_dasharray columns. To draw a vertical line, pass Inf as slope value.
axes_font_size font size for axes text (any CSS compatible value)
legend_font_size font size for legend text (any CSS compatible value)
caption caption to be displayed when clicking on the corresponding icon. Either a character string, or a list with title, subtitle and text elements.
Details

Interactive scatter plots based on htmlwidgets and d3.js

Author(s)

Julien Barnier <julien.barnier@ens-lyon.fr>

Source

D3.js was created by Michael Bostock. See http://d3js.org/

Examples

scatterD3(x = mtcars$wt, y = mtcars$mpg, data=NULL, lab = rownames(mtcars),
col_var = mtcars$cyl, symbol_var = mtcars$am,
xlab = "Weight", ylab = "Mpg", col_lab = "Cylinders",
symbol_lab = "Manual transmission", html_id = NULL)

scatterD3-shiny  Shiny bindings for scatterD3 widgets

Description

Output and render functions for using scatterD3 widgets within Shiny applications and interactive Rmd documents.

Usage

scatterD3Output(outputId, width = "100\%", height = "600px")

renderScatterD3(expr, env = parent.frame(), quoted = FALSE)

Arguments

outputId  output variable to read from
width, height  Must be a valid CSS unit (like "100\%", "400px", "auto") or a number, which will be coerced to a string and have "px" appended.
expr  An expression that generates a scatterD3 scatter plot.
env  The environment in which to evaluate expr.
quoted  Is expr a quoted expression (with quote())? This is useful if you want to save an expression in a variable.
