Package ‘scatterD3’

October 14, 2022

Type Package
Title D3 JavaScript Scatterplot from R
Version 1.0.1
Date 2021-10-06
Maintainer Julien Barnier <julien.barnier@cnrs.fr>
Description Creates 'D3' 'JavaScript' scatterplots from 'R' with interactive features: panning, zooming, tooltips, etc.
License GPL (>= 3)
VignetteBuilder knitr
Encoding UTF-8

Enhances shiny

Imports htmlwidgets, digest, ellipse

Suggests knitr, rmarkdown

RoxygenNote 7.1.1

NeedsCompilation no

scatterD3 Scatter plot HTML widget

Description

Generates an interactive scatter plot based on d3.js. Interactive features include zooming, panning, text labels moving, tooltips, fading effects in legend. Additional handlers are provided to change label size, point opacity or export the figure as an SVG file via HTML form controls.

Usage

scatterD3(
  x,
  y,
  data = NULL,
  lab = NULL,
  x_log = FALSE,
  y_log = FALSE,
  point_size = 64,
  labels_size = 10,
  labels_positions = NULL,
  point_opacity = 1,
  opacities = NULL,
  hover_size = 1,
  hover_opacity = NULL,
  fixed = FALSE,
  col_var = NULL,
  col_continuous = NULL,
  colors = NULL,
  ellipses = FALSE,
  ellipses_level = 0.95,
  symbol_var = NULL,
  symbols = NULL,
  size_var = NULL,
  size_range = c(10, 300),
  sizes = NULL,
  col_lab = NULL,
  symbol_lab = NULL,
  size_lab = NULL,
  key_var = NULL,
  type_var = NULL,
scatterD3 function arguments:

- `opacity_var`: NULL
- `unit_circle`: FALSE
- `url_var`: NULL
- `tooltips`: TRUE
- `tooltip_text`: NULL
- `tooltip_position`: "bottom right"
- `xlab`: NULL
- `ylab`: NULL
- `html_id`: NULL
- `width`: NULL
- `height`: NULL
- `legend_width`: 150
- `left_margin`: 30
- `xlim`: NULL
- `ylim`: NULL
- `dom_id_reset_zoom`: "scatterD3-reset-zoom"
- `dom_id_svg_export`: "scatterD3-svg-export"
- `dom_id_lasso_toggle`: "scatterD3-lasso-toggle"
- `transitions`: FALSE
- `menu`: TRUE
- `lasso`: FALSE
- `lasso_callback`: NULL
- `click_callback`: NULL
- `init_callback`: NULL
- `zoom_callback`: NULL
- `zoom_on`: NULL
- `zoom_on_level`: NULL
- `disable_wheel`: FALSE
- `lines`: data.frame(slope = c(0, Inf), intercept = c(0, 0), stroke_dasharray = c(5, 5))
- `axes_font_size`: "100%"
- `legend_font_size`: "100%"
- `caption`: NULL

**Arguments**

- **x**: numerical vector of x values, or variable name if data is not NULL
- **y**: numerical vector of y values, or variable name if data is not NULL
- **data**: default dataset to use for plot.
- **lab**: optional character vector of text labels, or variable name if data is not NULL
- **x_log**: if TRUE, set x scale as logarithmic
- **y_log**: if TRUE, set y scale as logarithmic
- **point_size**: points size. Ignored if size_var is not NULL.
- **labels_size**: text labels size
labels_positions
Either a data frame, as created by the "Export labels positions" menu entry, giving each label x and y position, or the value "auto" to use an automatic labeler.

point_opacity
points opacity, as an integer (same opacity for all points).

opacities
named list or named vector of opacities. Each opacity will be associated by their name within 'opacity_var'.

hover_size
factor for changing size when hovering points

hover_opacity
points opacity when hovering

fixed
force a 1:1 aspect ratio

col_var
optional vector for points color mapping, or variable name if data is not NULL

col_continuous
specify if the color scale must be continuous. By default, if col_var is numeric, not a factor, and has more than 6 unique values, it is considered as continuous.

colors
vector of custom points colors. Colors must be defined as an hexadecimal string (eg "#FF0000"). If colors is a named list or a named vector, then the colors will be associated with their name within col_var. A string can be given to specify a d3-scale-chromatic function name (for example, "interpolatePurples" or "schemeTableau10")

ellipses
draw confidence ellipses for points or the different color mapping groups

ellipses_level
confidence level for ellipses (0.95 by default)

symbol_var
optional vector for points symbol mapping, or variable name if data is not NULL

symbols
vector of custom points symbols. Symbols must be defined as character strings with the following possible values: "circle", "cross", "diamond", "square", "star", "triangle", and "wye". If symbols is a named list or a named vector, then the symbols will be associated with their name within symbol_var.

size_var
optional vector for points size mapping, or variable name if data is not NULL

size_range
numeric vector of length 2, giving the minimum and maximum point sizes when mapping with size_var

sizes
named list or named vector of sizes. Each size will be associated by their name within 'size_var'.

col_lab
color legend title. Set to NA to remove color legend entirely.

symbol_lab
symbols legend title. Set to NA to remove symbol legend entirely.

size_lab
size legend title. Set to NA to remove size legend entirely.

key_var
optional vector of rows ids, or variable name if data is not NULL. This is passed as a key to d3, and is only added in shiny apps where displayed rows are filtered interactively.

type_var
optional vector of points type: "point" for a dot (default), "arrow" for an arrow starting from the origin.

opacity_var
optional vector of points opacity (values between 0 and 1)

unit_circle
set tot TRUE to draw a unit circle

url_var
optional vector of URLs to be opened when a point is clicked
tooltips logical value to display tooltips when hovering points
tooltip_text optional character vector of tooltips text
tooltip_position the tooltip position relative to its point. Must a combination of "top" or "bottom" with "left" or "right" (default is "bottom right").
xlab x axis label
ylab y axis label.
html_id manually specify an HTML id for the svg root node. A random one is generated by default.
width figure width, computed when displayed
height figure height, computed when displayed
legend_width legend area width, in pixels. Set to 0 to disable legend completely.
left_margin margin on the left of the plot, in pixels
xlim numeric vector of length 2, manual x axis limits
ylim numeric vector of length 2, manual y axis limits
dom_id_reset_zoom HTML DOM id of the element to bind the "reset zoom" control to.
dom_id_svg_export HTML DOM id of the element to bind the "svg export" control to.
dom_id_lasso_toggle HTML DOM id of the element to bind the "toggle lasso" control to.
transitions if TRUE, data updates are displayed with smooth transitions, if FALSE the whole chart is redrawn. Only used within shiny apps.
menu wether to display the tools menu (gear icon)
lasso logical value to add https://github.com/skokenes/D3-Lasso-Plugind3-lasso-plugin feature
lasso_callback the body of a JavaScript callback function with the argument sel to be applied to a lasso plugin selection
click_callback the body of a JavaScript callback function whose inputs are html_id, and the index of the clicked element.
init_callback the body of a JavaScript callback function applied to the scatter object at init time.
zoom_callback the body of a JavaScript callback function whose inputs are the new xmin, xmax, ymin and ymax after a zoom action is triggered.
zoom_on coordinates where to center zoom on plot draw or update.
zoom_on_level zoom level on plot draw or update. Ignored if ‘zoom_on’ is NULL.
disable_wheel if TRUE, disable zooming with mousewheel.
lines a data frame with at least the slope and intercept columns, and as many rows as lines to add to scatterplot. Style can be added with stroke, stroke_width and stroke_dasharray columns. To draw a vertical line, pass Inf as slope value.
axes_font_size  font size for axes text (any CSS compatible value)
legend_font_size  font size for legend text (any CSS compatible value)
caption  caption to be displayed when clicking on the corresponding icon. Either a character string, or a list with title, subtitle and text elements.

Details
Interactive scatter plots based on htmlwidgets and d3.js

Source
D3.js was created by Michael Bostock. See https://d3js.org/

Examples
scatterD3(x = mtcars$wt, y = mtcars$mpg, data=NULL, lab = rownames(mtcars),
col_var = mtcars$cyl, symbol_var = mtcars$am,
xlab = "Weight", ylab = "Mpg", col_lab = "Cylinders",
symbol_lab = "Manual transmission", html_id = NULL)

scatterD3-shiny  Shiny bindings for scatterD3 widgets

Description
Output and render functions for using scatterD3 widgets within Shiny applications and interactive Rmd documents.

Usage
scatterD3Output(outputId, width = "100\%", height = "600px")
renderScatterD3(expr, env = parent.frame(), quoted = FALSE)

Arguments
outputId  output variable to read from
width, height  Must be a valid CSS unit (like "100\%", "400px", "auto") or a number, which will be coerced to a string and have "px" appended.
expr  An expression that generates a scatterD3 scatter plot.
env  The environment in which to evaluate expr.
quoted  Is expr a quoted expression (with quote())? This is useful if you want to save an expression in a variable.
