Package ‘sense’

October 14, 2022

Type Package
Title Automatic Stacked Ensemble for Regression Tasks
Version 1.0.0
Author Giancarlo Vercellino
Maintainer Giancarlo Vercellino <giancarlo.vercellino@gmail.com>
Description Stacked ensemble for regression tasks based on 'mlr3' framework with a pipeline for pre-processing numeric and factor features and hyper-parameter tuning using grid or random search.
License GPL-3
Encoding UTF-8
LazyData true

Benchmark data set

Description
A data frame for regression task generated with mlbench friedman1.

Usage
benchmark

Format
A data frame with 11 columns and 150 rows.

Source
mlbench, friedman1

Description
Stacked ensemble for regression tasks based on 'mlr3' framework.

Usage
sense(df, target_feat, benchmarking = "all", super = "avg", algos = c("glmnet", "ranger", "xgboost", "rpart", "kknn", "svm"), sampling_rate = 1, metric = "mae", collapse_char_to = 10, num_preproc = "scale", fct_preproc = "one-hot", impute_num = "sample", missing_fusion = FALSE, inner = "holdout", outer = "holdout", folds = 3, repeats = 3,
ratio = 0.5,
selected_filter = "information_gain",
selected_n_feats = NULL,
tuning = "random_search",
budget = 30,
resolution = 5,
n_evals = 30,
minute_time = 10,
patience = 0.3,
min_improve = 0.01,
java_mem = 64,
decimals = 2,
seed = 42
)

Arguments

df A data frame with features and target.
target_feat String. Name of the numeric feature for the regression task.
benchmarking Positive integer. Number of base learners to stack. Default: "all".
super String. Super learner of choice among the available learners. Default: "avg".
algos String vector. Available learners are: "glmnet", "ranger", "xgboost", "rpart",
"kknn", "svm".
sampling_rate Positive numeric. Sampling rate before applying the stacked ensemble. Default: 1.
metric String. Evaluation metric for outer and inner cross-validation. Default: "mae".
collapse_char_to Positive integer. Conversion of characters to factors with predefined maximum
number of levels. Default: 10.
num_preproc String. Options for scalar pre-processing: "scale" or "range". Default: "scale".
fct_preproc String. Options for factor pre-processing: "encodeimpact", "encodelmer",
"one-hot", "treatment", "poly", "sum", "helmert". Default: "one-hot".
impute_num String. Options for missing imputation in case of numeric: "sample" or "hist".
Default: "sample". For factor the default mode is Out-Of-Range.
missing_fusion String. Adding missing indicator features. Default: "FALSE".
inner String. Cross-validation inner cycle: "holdout", "cv", "repeated_cv", "subsampling".
Default: "holdout".
outer String. Cross-validation outer cycle: "holdout", "cv", "repeated_cv", "subsampling".
Default: "holdout".
folds Positive integer. Number of repetitions used in "cv" and "repeated_cv". Default: 3.
repeats Positive integer. Number of repetitions used in "subsampling" and "repeated_cv".
Default: 3.
ratio  Positive numeric. Percentage value for "holdout" and "subsampling". Default: 0.5.

selected_filter  
String. Filters available for regression tasks: "carscore", "cmim", "correlation", "find_correlation", "information_gain", "relief", "variance". Default: "information_gain".

selected_n_feats  
Positive integer. Number of features to select through the chosen filter. Default: NULL.

tuning  
String. Available options are "random_search" and "grid_search". Default: "random_search".

budget  

resolution  
Positive integer. Grid resolution for each hyper-parameter. Default: 5.

n_evals  

minute_time  

patience  
Positive numeric. Percentage of stagnating evaluations before termination. Default: 0.3.

min_improve  
Positive numeric. Minimum error improvement required before termination. Default: 0.01.

java_mem  
Positive integer. Memory allocated to Java. Default: 64.

decimals  

seed  
Positive integer. Default: 42.

Value

This function returns a list including:

- benchmark_error: comparison between the base learners
- resampled_model: mlr3 standard description of the analytic pipeline.
- plot: mlr3 standard graph of the analytic pipeline.
- selected_n_feats: selected features and score according to the filtering method used.
- model_error: error measure for outer cycle of cross-validation.
- testing_frame: data set used for calculating the test metrics.
- test_metrics: metrics reported are mse, rmse, mae, mdae, rae, rse, rrse, smape.
- model_predict: prediction function to apply to new data on the same scheme.
- time_log: computation time.
