Package ‘simglm’

October 14, 2022

Type Package
Version 0.8.9
Date 2022-02-06
License MIT + file LICENSE
Title Simulate Models Based on the Generalized Linear Model
Description Simulates regression models, including both simple regression and generalized linear mixed models with up to three level of nesting. Power simulations that are flexible allowing the specification of missing data, unbalanced designs, and different random error distributions are built into the package.
Depends R (>= 3.6.0)
Imports stats, methods, dplyr, purrr, broom, future.apply
Suggests knitr, lme4, nlme, testthat, shiny, e1071, ggplot2, tidyr, geepack, rmarkdown, future, splines, covr
VignetteBuilder knitr
Encoding UTF-8
RoxygenNote 7.1.2

R topics documented:

  compute_statistics .................................................. 2
  correlate_variables .................................................. 3
**compute_statistics**

Compute Power, Type I Error, or Precision Statistics

**Description**

Compute Power, Type I Error, or Precision Statistics

**Usage**

```r
compute_statistics(
  data,
  sim_args,
  power = TRUE,
  type_1_error = TRUE,
  precision = TRUE
)
```
**correlate_variables**

**Arguments**

- **data**
  A list of model results generated by `replicate_simulation` function.

- **sim_args**
  A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:
  - **fixed**: This is the fixed portion of the model (i.e. covariates)
  - **random**: This is the random portion of the model (i.e. random effects)
  - **error**: This is the error (i.e. residual term).

- **power**
  TRUE/FALSE flag indicating whether power should be computed. Defaults to TRUE.

- **type_1_error**
  TRUE/FALSE flag indicating whether type I error rate should be computed. Defaults to TRUE.

- **precision**
  TRUE/FALSE flag indicating whether precision should be computed. Defaults to TRUE.

**Description**

Correlate elements

**Usage**

`correlate_variables(data, sim_args, ...)`

**Arguments**

- **data**
  Data simulated from other functions to pass to this function.

- **sim_args**
  A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:
  - **fixed**: This is the fixed portion of the model (i.e. covariates)
  - **random**: This is the random portion of the model (i.e. random effects)
  - **error**: This is the error (i.e. residual term).
  - **correlate**: These are the correlations for random effects and/or fixed effects.

- **...**
  Additional arguments, currently not used.
**desireVar**  \textit{Computes mixture normal variance}

**Description**

Input the desired variance, number of distributions, and mean of the distributions, returns a value of the variance of each mixture distribution.

**Usage**

\texttt{desireVar(desVar, num\_dist, means, equalWeight = TRUE)}

**Arguments**

- \texttt{desVar} Desired overall variance of mixture normal distribution.
- \texttt{num\_dist} Number of normal distributions.
- \texttt{means} Vector of means for each normal distribution. Must equal \texttt{num\_dist}.
- \texttt{equalWeight} Should equal weights be used, only \texttt{TRUE} is currently supported.

**Details**

This function can be used to generate the inputs for the \texttt{rbimod} variances when a specific variance is desired. Especially useful when attempting to simulate a mixture normal/bimodal distribution.

---

**extract_coefficients**  \textit{Extract Coefficients}

**Description**

Extract Coefficients

**Usage**

\texttt{extract\_coefficients(model, extract\_function = NULL)}

**Arguments**

- \texttt{model} A returned model object from a fitted model.
- \texttt{extract\_function} A function that extracts model results. The function must take the model object as the only argument.
generate_missing  
*Tidy Missing Data Function*

**Description**

Tidy Missing Data Function

**Usage**

```r
generate_missing(data, sim_args)
```

**Arguments**

- `data` Data simulated from other functions to pass to this function.
- `sim_args` A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:
  - `fixed`: This is the fixed portion of the model (i.e. covariates)
  - `random`: This is the random portion of the model (i.e. random effects)
  - `error`: This is the error (i.e. residual term).

---

generate_response  
*Simulate response variable*

**Description**

Simulate response variable

**Usage**

```r
generate_response(data, sim_args, keep_intermediate = TRUE, ...)
```

**Arguments**

- `data` Data simulated from other functions to pass to this function.
- `sim_args` A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:
  - `fixed`: This is the fixed portion of the model (i.e. covariates)
  - `random`: This is the random portion of the model (i.e. random effects)
  - `error`: This is the error (i.e. residual term).
- `keep_intermediate` TRUE/FALSE flag indicating whether intermediate steps should be kept. This would include fixed effects times regression weights, random effect summations, etc. Default is TRUE.
- `...` Other arguments to pass to error simulation functions.
Description

Function that inputs simulated data and returns data frame with new response variable that includes missing data. Missing data types incorporated include dropout missing data, missing at random, and random missing data.

Usage

```r
missing_data(
  sim_data,  
  resp_var = "sim_data", 
  new_outcome = "sim_data2", 
  clust_var = NULL,  
  within_id = NULL, 
  miss_prop = NULL, 
  dropout_location = NULL, 
  type = c("dropout", "random", "mar"),  
  miss_cov, 
  mar_prop
)

dropout_missing(
  sim_data, 
  resp_var = "sim_data", 
  new_outcome = "sim_data2", 
  clust_var = "clustID", 
  within_id = "withinID", 
  miss_prop = NULL, 
  dropout_location = NULL
)

random_missing(
  sim_data, 
  resp_var = "sim_data", 
  new_outcome = "sim_data2", 
  miss_prop, 
  clust_var = NULL,  
  within_id = "withinID"
)

mar_missing(
  sim_data, 
  resp_var = "sim_data", 
  new_outcome = "sim_data2",
)```
model_fit

  miss_cov,
  mar_prop

Arguments

sim_data Simulated data frame
resp_var Character string of response variable with complete data.
new_outcome Character string of new outcome variable name that includes the missing data.
clust_var Cluster variable used for the grouping, set to NULL by default which means no clustering.
within_id ID variable within each cluster.
miss_prop Proportion of missing data overall
dropout_location A vector the same length as the number of clusters representing the number of data observations for each individual.
type The type of missing data to generate, currently supports dropout, random, or missing at random (mar) missing data.
miss_cov Covariate that the missing values are based on.
mar_prop Proportion of missing data for each unique value specified in the miss_cov argument.

model_fit Tidy Model Fitting Function

Description

Tidy Model Fitting Function

Usage

model_fit(data, sim_args, ...)

Arguments

data A data object, most likely generated from within simglm
sim_args A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:
  • fixed: This is the fixed portion of the model (i.e. covariates)
  • random: This is the random portion of the model (i.e. random effects)
  • error: This is the error (i.e. residual term).
  • model_fit: These are arguments passed to the model_fit function.

... Currently not used.
**parse_correlation**  
*Parse correlation arguments*

**Description**
This function is used to parse user specified correlation attributes. The correlation attributes need to be in a dataframe to be processed internally. Within the dataframe, there are expected to be 3 columns, 1) names of variable/attributes, 2) the variable/attribute pair for 1, 3) the correlation.

**Usage**

```r
describe_correlation(sim_args)
```

**Arguments**
- **sim_args**  
  A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:
  - **fixed**: This is the fixed portion of the model (i.e. covariates)
  - **random**: This is the random portion of the model (i.e. random effects)
  - **error**: This is the error (i.e. residual term).
  - **correlate**: These are the correlations for random effects and/or fixed effects.

---

**parse_crossclass**  
*Parse Cross-classified Random Effects*

**Description**
Parse Cross-classified Random Effects

**Usage**

```r
describe_crossclass(sim_args, random_formula_parsed)
```

**Arguments**
- **sim_args**  
  Simulation arguments
- **random_formula_parsed**
  This is the output from `parse_randomeffect`.
**parse_formula**

**Parses tidy formula simulation syntax**

**Description**

A function that parses the formula simulation syntax in order to simulate data.

**Usage**

```r
parse_formula(sim_args)
```

**Arguments**

- `sim_args` A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:
  - `fixed`: This is the fixed portion of the model (i.e. covariates)
  - `random`: This is the random portion of the model (i.e. random effects)
  - `error`: This is the error (i.e. residual term).

---

**parse_power**

**Parse power specifications**

**Description**

Parse power specifications

**Usage**

```r
parse_power(sim_args, samp_size)
```

**Arguments**

- `sim_args` A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:
  - `fixed`: This is the fixed portion of the model (i.e. covariates)
  - `random`: This is the random portion of the model (i.e. random effects)
  - `error`: This is the error (i.e. residual term).

- `samp_size` The sample size pulled from the simulation arguments or the power model results when `vary_arguments` is used.
**parse_randomeffect**  
*Parses random effect specification*

**Description**

Parses random effect specification

**Usage**

```r
parse_randomeffect(formula)
```

**Arguments**

- `formula`  
  Random effect formula already parsed by `parse_formula`

---

**parse_varyarguments**  
*Parse varying arguments*

**Description**

Parse varying arguments

**Usage**

```r
parse_varyarguments(sim_args)
```

**Arguments**

- `sim_args`  
  A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:
  - `fixed`: This is the fixed portion of the model (i.e. covariates)
  - `random`: This is the random portion of the model (i.e. random effects)
  - `error`: This is the error (i.e. residual term).
**rbimod**

*Simulating mixture normal distributions*

**Description**

Input simulation metrics returns mixture normal random variable.

**Usage**

```
rbimod(n, mean, var, num_dist)
```

**Arguments**

- `n`  Number of random draws. Optionally can be a vector with number in each simulated normal distribution.
- `mean`  Vector of mean values for each normal distribution. Must be the same length as `num_dist`.
- `var`  Vector of variance values for each normal distribution. Must be the same length as `num_dist`.
- `num_dist`  Number of normal distributions to use when simulating mixture normal distribution.

**Details**

Function to simulate mixture normal distributions. The function computes adds the specified number of normal distributions into a single vector.

Use of the function `desireVar` can be used to generate a mixture normal distribution with a specific global variance.

---

**replicate_simulation**  *Replicate Simulation*

**Description**

Replicate Simulation

**Usage**

```
replicate_simulation(sim_args, return_list = FALSE, future.seed = TRUE, ...)
```
Arguments

**sim_args**
A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:

- fixed: This is the fixed portion of the model (i.e. covariates)
- random: This is the random portion of the model (i.e. random effects)
- error: This is the error (i.e. residual term).

**return_list**
TRUE/FALSE indicating whether a full list output should be returned. If TRUE, the nested list is returned. If FALSE, replications are combined with a replication id appended.

**future.seed**
TRUE/FALSE or numeric. Default value is true, see `future_replicate`.

... Currently not used.

---

run_shiny  
*Run Shiny Application Demo*

Description

Function runs Shiny Application Demo

Usage

```r
run_shiny()
```

Details

This function does not take any arguments and will run the Shiny Application. If running from RStudio, will open the application in the viewer, otherwise will use the default internet browser.

---

**simglm**

*simglm*: A package to simulate and perform power by simulation for models based on the generalized linear model.

Description

The simglm package provides two categories of important functions: simulation functions and power functions. The package follows a tidy framework where functions are designed to be similar, do one thing, and stack on top of each other to build more complex systems.

This function is most useful to pass to `replicate_simulation`. The function attempts to determine automatically which aspects to add to the simulation/power generation based on the elements found in the `sim_args` argument.

Usage

```r
simglm(sim_args)
```
**simulate_error**

**Arguments**

- **sim_args**
  A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:
  - fixed: This is the fixed portion of the model (i.e. covariates)
  - random: This is the random portion of the model (i.e. random effects)
  - error: This is the error (i.e. residual term).

**Description**

Tidy error simulation

**Usage**

`simulate_error(data, sim_args, ...)`

**Arguments**

- **data**
  Data simulated from other functions to pass to this function.
- **sim_args**
  A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:
  - fixed: This is the fixed portion of the model (i.e. covariates)
  - random: This is the random portion of the model (i.e. random effects)
  - error: This is the error (i.e. residual term).
- **...**
  Other arguments to pass to error simulation functions.

**simulate_fixed**

**Tidy fixed effect formula simulation**

**Description**

This function simulates the fixed portion of the model using a formula syntax.

**Usage**

`simulate_fixed(data, sim_args, ...)`
**simulate_heterogeneity**

**Tidy heterogeneity of variance simulation**

**Description**

This function simulates heterogeneity of level one error variance.

**Usage**

```r
simulate_heterogeneity(data, sim_args, ...)
```

**Arguments**

- **data**: Data simulated from other functions to pass to this function. This function needs to be specified after 'simulate_fixed' and 'simulate_error'.
- **sim_args**: A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:
  - **fixed**: This is the fixed portion of the model (i.e. covariates)
  - **random**: This is the random portion of the model (i.e. random effects)
  - **error**: This is the error (i.e. residual term).
- **...**: Other arguments to pass to error simulation functions.
**simulate_knot**  

**Simulate knot locations**

**Description**

Function that generates knot locations. An example of usefulness of this function would be with generation of interrupted time series data. Another application may be with simulation of piecewise linear data structures.

**Usage**

```r
simulate_knot(data, sim_args)
```

**Arguments**

- `data`  
  Mostly internal argument.

- `sim_args`  
  A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:
  - `fixed`: This is the fixed portion of the model (i.e. covariates)
  - `random`: This is the random portion of the model (i.e. random effects)
  - `error`: This is the error (i.e. residual term).

---

**simulate_randomeffect**  

**Tidy random effect formula simulation**

**Description**

This function simulates the random portion of the model using a formula syntax.

**Usage**

```r
simulate_randomeffect(data, sim_args, ...)
```

**Arguments**

- `data`  
  Data simulated from other functions to pass to this function. Can pass NULL if first in simulation string.

- `sim_args`  
  A named list with special model formula syntax. See details and examples for more information. The named list may contain the following:
  - `fixed`: This is the fixed portion of the model (i.e. covariates)
  - `random`: This is the random portion of the model (i.e. random effects)
  - `error`: This is the error (i.e. residual term).

- `...`  
  Other arguments to pass to error simulation functions.
sim_continuous2  Simulate continuous variables

Description
Function that simulates continuous variables. Any distribution function in R is supported.

Usage
sim_continuous2(
  n,
  dist = "rnorm",
  var_level = 1,
  variance = NULL,
  ther_sim = FALSE,
  ther_val = NULL,
  ...
)

Arguments
n  A list of sample sizes.
dist  A distribution function. This argument takes a quoted R distribution function (e.g. 'rnorm'). Default is 'rnorm'.
var_level  The level the variable should be simulated at. This can either be 1, 2, or 3 specifying a level 1, level 2, or level 3 variable respectively.
variance  The variance for random effect simulation.
ther_sim  A TRUE/FALSE flag indicating whether the error simulation function should be simulated, that is should the mean and standard deviation used for standardization be simulated.
ther_val  A vector of 2 that should include the theoretical mean and standard deviation of the generating function.
...  Additional parameters to pass to the dist_fun argument.

sim_factor2  Simulate categorical, factor, or discrete variables

Description
Function that simulates discrete, factor, or categorical variables. Is essentially a wrapper around the sample function from base R.
**sim_time**

**Usage**

```r
sim_factor2(n, levels, var_level = 1, replace = TRUE, ...)
```

**Arguments**

- `n` A list of sample sizes.
- `levels` Scalar indicating the number of levels for categorical, factor, or discrete variable. Can also specify levels as a character vector.
- `var_level` The level the variable should be simulated at. This can either be 1, 2, or 3 specifying a level 1, level 2, or level 3 variable respectively.
- `replace` TRUE/FALSE indicating whether levels should be sampled with replacement. Default is TRUE.
- `...` Additional parameters passed to the sample function.

---

**Simulate Time**

**Description**

This function simulates data for the time variable of longitudinal data.

**Usage**

```r
sim_time(n, time_levels = NULL, ...)
```

**Arguments**

- `n` Sample size of the levels.
- `time_levels` The values the time variable should take. If NULL (default), the time values are discrete integers starting at 0 and going to n - 1.
- `...` Currently not used.

---

**Transform response variable**

**Description**

Transform response variable

**Usage**

```r
transform_outcome(outcome, type, ...)
```
### Arguments

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>outcome</code></td>
<td>The outcome variable to transform.</td>
</tr>
<tr>
<td><code>type</code></td>
<td>Type of transformation to apply.</td>
</tr>
<tr>
<td><code>...</code></td>
<td>Additional arguments passed to distribution functions.</td>
</tr>
</tbody>
