Package ‘spam64’

June 19, 2018

Type Package

Title 64-Bit Extension of the SPArse Matrix R Package 'spam'

Version 2.2-0

Date 2018-06-19

Description Provides the Fortran code of the R package 'spam'
with 64-bit integers. Loading this package together with the R package
spam enables the sparse matrix class spam to handle huge sparse matrices
with more than 2^31-1 non-zero elements.

Suggests spam (== 2.2-0)

spam64-package 64-bit extension for the SPArse Matrix Package spam

---

**Description**

Provides the Fortran code of the R package spam with 64-bit integers. Loading this package together with the R package spam enables the sparse matrix class spam to handle huge sparse matrices with more than $2^{31}-1$ non-zero elements.

**Note**

It is intended to use spam64 together with spam. To avoid issues on 32-bit platforms we did not link the packages spam and spam64 using dependencies. Some spam64 functions have been successfully tested with 64-bit matrices. However, we expect that some functions of spam do not work with 64-bit matrices (yet). Please do not hesitate to contact us via email or https://git.math.uzh.ch/reinhard.furrer/spam in case you would like to use a spam function with 64-bit matrices that is not working properly in the current version.

**References**

**Examples**

```r
## not run:
library("spam")
library("spam64")
s1 <- spam(1, ncol=2^30) # 32-bit matrix
s1
```
s2 <- cbind(s1, s1)  # 64-bit matrix
s2

s3 <- spam(1, ncol=2^31)  # 64-bit matrix
s3

## End(Not run)
