Package ‘wallace’

May 24, 2021

Version  1.1.0
Date    2021-05-19
Title   A Modular Platform for Reproducible Modeling of Species Niches and Distributions
Author  Jamie M. Kass [aut],
         Gonzalo E. Pinilla-Buitrago [aut, cre],
         Bruno Vilela [aut],
         Matthew E. Aiello-Lammens [aut],
         Robert Muscarella [aut],
         Cory Merow [aut],
         Robert P. Anderson [aut]
Maintainer Gonzalo E. Pinilla-Buitrago <gpinillabuitrago@gradcenter.cuny.edu>
Depends  R (>= 3.5.0), leaflet (>= 2.0.2), shiny (>= 1.1.0)
Imports dismo, dplyr, DT (>= 0.4), ENMeval (>= 2.0.0), jsonlite,
        leaflet.extras, magrittr, raster, RColorBrewer, rgeos, rgdal,
        rmarkdown, shinyjs, shinythemes, sp, spocc (>= 0.8.0), spThin,
        zip
Suggests knitr, rgbif (>= 3.3.0), testthat, XML
Description The ‘shiny’ application ‘wallace’ is a modular platform for reproducible modeling of species niches and distributions. ‘wallace’ guides users through a complete analysis, from the acquisition of species occurrence and environmental data to visualizing model predictions on an interactive map, thus bundling complex workflows into a single, streamlined interface.

Description

Wallace is a shiny app that guides users through a complete species niche/distributional modeling analysis, from the acquisition of species occurrence and environmental data to visualizing model predictions on an interactive map (rleaflet), thus bundling complex workflows into a single, streamlined GUI interface. New functionality, in the form of modules, can be added to Wallace via contributions from the user community. In addition, executable session code (R Markdown format) can be downloaded to share with others or use as supplementary information for scientific papers and reports. The application is run via the function run_wallace.

Details

Please see the official website (https://wallaceecomod.github.io/) for more details. If you have questions about the application, please participate in the Google Group, or email the team directly: <wallaceecomod@gmail.com>.

**References**

---

**run_wallace**  
*Run Wallace Application*

---

**Description**

This function runs the *Wallace* application in the user’s default web browser.

**Usage**

```r
run_wallace(launch.browser = TRUE, port = getOption("shiny.port"))
```

**Arguments**

- `launch.browser`  
  Run Wallace in browser

- `port`  
  If `launch.browser` is FALSE, specify port to run Wallace

**Note**

Please see the official website (https://wallaceecomod.github.io/) for more details. If you have questions about the application, please participate in the Google Group, or email the team directly: <wallaceecomod@gmail.com>.

**Author(s)**

Jamie M. Kass

**Examples**

```r
if(interactive()){
  run_wallace()
}
```
