

Package ‘webmockr’

September 30, 2020

Title Stubbing and Setting Expectations on 'HTTP' Requests

Description Stubbing and setting expectations on 'HTTP' requests.

Includes tools for stubbing 'HTTP' requests, including expected request conditions and response conditions. Match on 'HTTP' method, query parameters, request body, headers and more. Can be used for unit tests or outside of a testing context.

Version 0.7.0

webmockr-package	<i>webmockr</i>
------------------	-----------------

Description

Stubbing and setting expectations on HTTP requests

Features

- Stubbing HTTP requests at low http client lib level
- Setting and verifying expectations on HTTP requests
- Matching requests based on method, URI, headers and body
- Supports multiple HTTP libraries, including **crul** and **httr**
- Integration with HTTP test caching library **vcr**

Author(s)

Scott Chamberlain <myrmecocystus+r@gmail.com>

Aaron Wolen

Examples

```
library(webmockr)
stub_request("get", "https://httpbin.org/get")
stub_request("post", "https://httpbin.org/post")
stub_registry()
```

build_crul_request	<i>Build a crul request</i>
--------------------	-----------------------------

Description

Build a crul request

Usage

```
build_crul_request(x)
```

Arguments

x	an unexecuted crul request object
---	-----------------------------------

Value

a crul request

build_crul_response	<i>Build a crul response</i>
---------------------	------------------------------

Description

Build a crul response

Usage

```
build_crul_response(req, resp)
```

Arguments

req	a request
resp	a response

Value

a crul response

build_httr_request	<i>Build a httr request</i>
--------------------	-----------------------------

Description

Build a httr request

Usage

```
build_httr_request(x)
```

Arguments

x	an unexecuted httr request object
---	-----------------------------------

Value

a httr request

build_httr_response	<i>Build a httr response</i>
---------------------	------------------------------

Description

Build a httr response

Usage

```
build_httr_response(req, resp)
```

Arguments

req	a request
resp	a response

Value

a httr response

CrulAdapter	<i>Adapters for Modifying HTTP Requests</i>
-------------	---

Description

Adapter is the base parent class used to implement **webmockr** support for different HTTP clients. It should not be used directly. Instead, use one of the client-specific adapters that webmockr currently provides:

- CrulAdapter for **crul**
- HttrAdapter for **httr**

Details

Note that the documented fields and methods are the same across all client-specific adapters.

Super class

```
webmockr::Adapter -> CrulAdapter
```

Public fields

client	HTTP client package name
name	adapter name

Methods**Public methods:**

- [CurlAdapter\\$clone\(\)](#)

Method clone(): The objects of this class are cloneable with this method.

Usage:

CurlAdapter\$clone(deep = FALSE)

Arguments:

deep Whether to make a deep clone.

Super class

[webmockr::Adapter](#) -> HttpAdapter

Public fields

client HTTP client package name

name adapter name

Methods**Public methods:**

- [HttpAdapter\\$clone\(\)](#)

Method clone(): The objects of this class are cloneable with this method.

Usage:

HttpAdapter\$clone(deep = FALSE)

Arguments:

deep Whether to make a deep clone.

Public fields

client HTTP client package name

name adapter name

Methods**Public methods:**

- [Adapter\\$new\(\)](#)
- [Adapter\\$enable\(\)](#)
- [Adapter\\$disable\(\)](#)
- [Adapter\\$handle_request\(\)](#)
- [Adapter\\$remove_stubs\(\)](#)
- [Adapter\\$clone\(\)](#)

Method new(): Create a new Adapter object

Usage:

Adapter\$new()

Method enable(): Enable the adapter

Usage:

Adapter\$enable()

Returns: TRUE, invisibly

Method disable(): Disable the adapter

Usage:

Adapter\$disable()

Returns: FALSE, invisibly

Method handle_request(): All logic for handling a request

Usage:

Adapter\$handle_request(req)

Arguments:

req a request

Returns: various outcomes

Method remove_stubs(): Remove all stubs

Usage:

Adapter\$remove_stubs()

Returns: nothing returned; removes all request stubs

Method clone(): The objects of this class are cloneable with this method.

Usage:

Adapter\$clone(deep = FALSE)

Arguments:

deep Whether to make a deep clone.

Examples

```
## Not run:
if (requireNamespace("httr", quietly = TRUE)) {
  # library(httr)

  # normal httr request, works fine
  # real <- GET("https://httpbin.org/get")
  # real

  # with webmockr
  # library(webmockr)
  ## turn on httr mocking
```

```

# httr_mock()
## now this request isn't allowed
# GET("https://httpbin.org/get")
## stub the request
# stub_request('get', uri = 'https://httpbin.org/get') %>%
#   with(
#     headers = list('Accept' = 'application/json, text/xml, application/xml, */*')
#   ) %>%
#   to_return(status = 418, body = "I'm a teapot!", headers = list(a = 5))
## now the request succeeds and returns a mocked response
# (res <- GET("https://httpbin.org/get"))
# res$status_code
# rawToChar(res$content)

# allow real requests while webmockr is loaded
# webmockr_allow_net_connect()
# webmockr_net_connect_allowed()
# GET("https://httpbin.org/get?animal=chicken")
# webmockr_disable_net_connect()
# webmockr_net_connect_allowed()
# GET("https://httpbin.org/get?animal=chicken")

# httr_mock(FALSE)
}

## End(Not run)

```

enable

Enable or disable webmockr

Description

Enable or disable webmockr

Usage

```
enable(adapter = NULL, options = list())
```

```
enabled(adapter = "crul")
```

```
disable(adapter = NULL, options = list())
```

Arguments

adapter	(character) the adapter name, 'crul' or 'httr'. one or the other. if none given, we attempt to enable both adapters
options	list of options - ignored for now.

Details

enable() enables **webmockr** for all adapters. disable() disables **webmockr** for all adapters. enabled() answers whether **webmockr** is enabled for a given adapter

Value

enable() and disable() invisibly returns booleans for each adapter, as a result of running enable or disable, respectively, on each [HttpLibAdapaterRegistry](#) object. enabled returns a single boolean

HashCounter

HashCounter

Description

hash with counter, to store requests, and count each time it is used

Public fields

hash (list) a list for internal use only, with elements key, sig, and count

Methods**Public methods:**

- [HashCounter\\$put\(\)](#)
- [HashCounter\\$get\(\)](#)
- [HashCounter\\$clone\(\)](#)

Method put(): Register a request by it's key

Usage:

HashCounter\$put(req_sig)

Arguments:

req_sig an object of class RequestSignature

Returns: nothing returned; registers request and iterates internal counter

Method get(): Get a request by key

Usage:

HashCounter\$get(req_sig)

Arguments:

req_sig an object of class RequestSignature

Returns: (integer) the count of how many times the request has been made

Method clone(): The objects of this class are cloneable with this method.

Usage:

HashCounter\$clone(deep = FALSE)

Arguments:

deep Whether to make a deep clone.

See Also

Other request-registry: [RequestRegistry](#), [request_registry\(\)](#)

Examples

```
x <- HashCounter$new()
x$hash
z <- RequestSignature$new(method = "get", uri = "https://httpbin.org/get")
x$put(z)
x$hash
x$get(z)
x$put(z)
x$get(z)
```

HttpLibAdapaterRegistry

HttpLibAdapaterRegistry

Description

http lib adapter registry

Public fields

adapters list

Methods**Public methods:**

- [HttpLibAdapaterRegistry#print\(\)](#)
- [HttpLibAdapaterRegistry\\$register\(\)](#)
- [HttpLibAdapaterRegistry\\$clone\(\)](#)

Method [print\(\)](#): print method for the HttpLibAdapaterRegistry class

Usage:

HttpLibAdapaterRegistry#print(x, ...)

Arguments:

x self

... ignored

Method [register\(\)](#): Register an http library adapter

Usage:

HttpLibAdapaterRegistry\$register(x)

Arguments:

x an http lib adapter, e.g., [CrulAdapter](#)

Returns: nothing, registers the library adapter

Method `clone()`: The objects of this class are cloneable with this method.

Usage:

```
HttpLibAdapaterRegistry$clone(deep = FALSE)
```

Arguments:

`deep` Whether to make a deep clone.

Examples

```
x <- HttpLibAdapaterRegistry$new()
x$register(CrulAdapter$new())
x
x$adapters
x$adapters[[1]]$name
```

httr_mock	<i>Turn on httr mocking Sets a callback that routes httr request through webmockr</i>
-----------	---

Description

Turn on httr mocking Sets a callback that routes httr request through webmockr

Usage

```
httr_mock(on = TRUE)
```

Arguments

`on` (logical) set to TRUE to turn on, and FALSE to turn off. default: TRUE

Value

Silently returns TRUE when enabled and FALSE when disabled.

mocking-disk-writing *Mocking writing to disk*

Description

Mocking writing to disk

Examples

```
## Not run:
# enable mocking
enable()

# Write to a file before mocked request

# crul
library(crul)
## make a temp file
f <- tempfile(fileext = ".json")
## write something to the file
cat("{\"hello\":\"world\"}\n", file = f)
readLines(f)
## make the stub
stub_request("get", "https://httpbin.org/get") %>%
  to_return(body = file(f))
## make a request
(out <- HttpClient$new("https://httpbin.org/get")$get(disk = f))
out$content
readLines(out$content)

# httr
library(httr)
## make a temp file
f <- tempfile(fileext = ".json")
## write something to the file
cat("{\"hello\":\"world\"}\n", file = f)
readLines(f)
## make the stub
stub_request("get", "https://httpbin.org/get") %>%
  to_return(body = file(f),
    headers = list('content-type' = "application/json"))
## make a request
## with httr, you must set overwrite=TRUE or you'll get an error
out <- GET("https://httpbin.org/get", write_disk(f, overwrite=TRUE))
out
out$content
content(out, "text", encoding = "UTF-8")

# Use mock_file to have webmockr handle file and contents
```

```

# crul
library(crul)
f <- tempfile(fileext = ".json")
## make the stub
stub_request("get", "https://httpbin.org/get") %>%
  to_return(body = mock_file(f, "{\"hello\":\"mars\"}\n"))
## make a request
(out <- crul::HttpClient$new("https://httpbin.org/get")$get(disk = f))
out$content
readLines(out$content)

# httr
library(httr)
## make a temp file
f <- tempfile(fileext = ".json")
## make the stub
stub_request("get", "https://httpbin.org/get") %>%
  to_return(
    body = mock_file(path = f, payload = "{\"foo\": \"bar\"}"),
    headers = list('content-type' = "application/json")
  )
## make a request
out <- GET("https://httpbin.org/get", write_disk(f))
out
## view stubbed file content
out$content
readLines(out$content)
content(out, "text", encoding = "UTF-8")

# disable mocking
disable()

## End(Not run)

```

mock_file

Mock file

Description

Mock file

Usage

```
mock_file(path, payload)
```

Arguments

path	(character) a file path. required
payload	(character) string to be written to the file given at path parameter. required

Value

a list with S3 class `mock_file`

Examples

```
mock_file(path = tempfile(), payload = "{\"foo\": \"bar\"}")
```

`pluck_body`

Extract the body from an HTTP request

Description

Returns an appropriate representation of the data contained within a request body based on its encoding.

Usage

```
pluck_body(x)
```

Arguments

`x` an unexecuted `curl` or `httr` request object

Value

one of the following:

- NULL if the request is not associated with a body
- NULL if an upload is used not in a list
- list containing the multipart-encoded body
- character vector with the JSON- or raw-encoded body, or upload form file

`remove_request_stub`

Remove a request stub

Description

Remove a request stub

Usage

```
remove_request_stub(stub)
```

Arguments

`stub` a request stub, of class `StubbedRequest`

Value

logical, TRUE if removed, FALSE if not removed

See Also

Other stub-registry: [StubRegistry](#), [stub_registry_clear\(\)](#), [stub_registry\(\)](#)

Examples

```
(x <- stub_request("get", "https://httpbin.org/get"))
stub_registry()
remove_request_stub(x)
stub_registry()
```

RequestPattern

RequestPattern class

Description

class handling all request matchers

Public fields

method_pattern xxx
uri_pattern xxx
body_pattern xxx
headers_pattern xxx

Methods**Public methods:**

- [RequestPattern\\$new\(\)](#)
- [RequestPattern\\$matches\(\)](#)
- [RequestPattern\\$to_s\(\)](#)
- [RequestPattern\\$clone\(\)](#)

Method `new()`: Create a new RequestPattern object

Usage:

```
RequestPattern$new(  
  method,  
  uri = NULL,  
  uri_regex = NULL,  
  query = NULL,  
  body = NULL,  
  headers = NULL  
)
```

Arguments:

method the HTTP method (any, head, options, get, post, put, patch, trace, or delete). "any" matches any HTTP method. required.

uri (character) request URI. required or uri_regex

uri_regex (character) request URI as regex. required or uri

query (list) query parameters, optional

body (list) body request, optional

headers (list) headers, optional

Returns: A new RequestPattern object

Method matches(): does a request signature match the selected matchers?

Usage:

```
RequestPattern$matches(request_signature)
```

Arguments:

request_signature a [RequestSignature](#) object

Returns: a boolean

Method to_s(): Print pattern for easy human consumption

Usage:

```
RequestPattern$to_s()
```

Returns: a string

Method clone(): The objects of this class are cloneable with this method.

Usage:

```
RequestPattern$clone(deep = FALSE)
```

Arguments:

deep Whether to make a deep clone.

See Also

pattern classes for HTTP method [MethodPattern](#), headers [HeadersPattern](#), body [BodyPattern](#), and URI/URL [UriPattern](#)

Examples

```
## Not run:
(x <- RequestPattern$new(method = "get", uri = "httpbin.org/get"))
x$body_pattern
x$headers_pattern
x$method_pattern
x$uri_pattern
x$to_s()

# make a request signature
rs <- RequestSignature$new(method = "get", uri = "http://httpbin.org/get")
```

```

# check if it matches
x$matches(rs)

# regex uri
(x <- RequestPattern$new(method = "get", uri_regex = ".+ossref.org"))
x$uri_pattern
x$uri_pattern$to_s()
x$to_s()

# uri with query parameters
(x <- RequestPattern$new(
  method = "get", uri = "https://httpbin.org/get",
  query = list(foo = "bar")
))
x$to_s()
## query params included in url, not separately
(x <- RequestPattern$new(
  method = "get", uri = "https://httpbin.org/get?stuff=things"
))
x$to_s()
x$query_params

# just headers (via setting method=any & uri_regex=.)
headers <- list(
  'User-Agent' = 'Apple',
  'Accept-Encoding' = 'gzip, deflate',
  'Accept' = 'application/json, text/xml, application/xml, */*')
x <- RequestPattern$new(
  method = "any",
  uri_regex = ".+",
  headers = headers)
x$to_s()
rs <- RequestSignature$new(method = "any", uri = "http://foo.bar",
  options = list(headers = headers))
rs
x$matches(rs)

# body
x <- RequestPattern$new(method = "post", uri = "httpbin.org/post",
  body = list(y = crul::upload(system.file("CITATION"))))
x$to_s()
rs <- RequestSignature$new(method = "post", uri = "http://httpbin.org/post",
  options = list(
    body = list(y = crul::upload(system.file("CITATION"))))
rs
x$matches(rs)

## End(Not run)

```

Description

keeps track of HTTP requests

Public fields

request_signatures a HashCounter object

Methods**Public methods:**

- [RequestRegistry#print\(\)](#)
- [RequestRegistry\\$reset\(\)](#)
- [RequestRegistry\\$register_request\(\)](#)
- [RequestRegistry\\$times_executed\(\)](#)
- [RequestRegistry\\$clone\(\)](#)

Method print(): print method for the RequestRegistry class

Usage:

RequestRegistry#print(x, ...)

Arguments:

x self

... ignored

Method reset(): Reset the registry to no registered requests

Usage:

RequestRegistry\$reset()

Returns: nothing returned; resets registry to no requests

Method register_request(): Register a request

Usage:

RequestRegistry\$register_request(request)

Arguments:

request a character string of the request, serialized from a RequestSignature\$new(...)\$to_s()

Returns: nothing returned; registers the request

Method times_executed(): How many times has a request been made

Usage:

RequestRegistry\$times_executed(request_pattern)

Arguments:

request_pattern an object of class RequestPattern

Details: if no match is found for the request pattern, 0 is returned

Returns: integer, the number of times the request has been made

Method clone(): The objects of this class are cloneable with this method.

Usage:

```
RequestRegistry$clone(deep = FALSE)
```

Arguments:

deep Whether to make a deep clone.

See Also

[stub_registry\(\)](#) and [StubRegistry](#)

Other request-registry: [HashCounter](#), [request_registry\(\)](#)

Examples

```
x <- RequestRegistry$new()
z1 <- RequestSignature$new("get", "http://scottchamberlain.info")
z2 <- RequestSignature$new("post", "https://httpbin.org/post")
x$register_request(request = z1)
x$register_request(request = z1)
x$register_request(request = z2)
# print method to list requests
x

# more complex requests
w <- RequestSignature$new(
  method = "get",
  uri = "https://httpbin.org/get",
  options = list(headers = list(`User-Agent` = "foobar", stuff = "things"))
)
w$to_s()
x$register_request(request = w)
x

# hashes, and number of times each requested
x$request_signatures$hash

# times_executed method
pat <- RequestPattern$new(
  method = "get",
  uri = "https://httpbin.org/get",
  headers = list(`User-Agent` = "foobar", stuff = "things")
)
pat$to_s()
x$times_executed(pat)
z <- RequestPattern$new(method = "get", uri = "http://scottchamberlain.info")
x$times_executed(z)
w <- RequestPattern$new(method = "post", uri = "https://httpbin.org/post")
x$times_executed(w)

## pattern with no matches - returns 0 (zero)
pat <- RequestPattern$new(
```

```

    method = "get",
    uri = "http://recology.info/"
  )
  pat$to_s()
  x$times_executed(pat)

  # reset the request registry
  x$reset()

```

RequestSignature

*RequestSignature***Description**

General purpose request signature builder

Public fields

method (character) an http method
 uri (character) a uri
 body (various) request body
 headers (list) named list of headers
 proxies (list) proxies as a named list
 auth (list) authentication details, as a named list
 url internal use
 disk (character) if writing to disk, the path

Methods**Public methods:**

- [RequestSignature\\$new\(\)](#)
- [RequestSignature\\$print\(\)](#)
- [RequestSignature\\$to_s\(\)](#)
- [RequestSignature\\$clone\(\)](#)

Method `new()`: Create a new RequestSignature object

Usage:

```
RequestSignature$new(method, uri, options = list())
```

Arguments:

method the HTTP method (any, head, options, get, post, put, patch, trace, or delete). "any" matches any HTTP method. required.
 uri (character) request URI. required.
 options (list) options. optional. See Details.

Returns: A new RequestSignature object

Method print(): print method for the RequestSignature class

Usage:

```
RequestSignature$print()
```

Arguments:

x self

... ignored

Method to_s(): Request signature to a string

Usage:

```
RequestSignature$to_s()
```

Returns: a character string representation of the request signature

Method clone(): The objects of this class are cloneable with this method.

Usage:

```
RequestSignature$clone(deep = FALSE)
```

Arguments:

deep Whether to make a deep clone.

Examples

```
# make request signature
x <- RequestSignature$new(method = "get", uri = "https://httpbin.org/get")
# method
x$method
# uri
x$uri
# request signature to string
x$to_s()

# headers
w <- RequestSignature$new(
  method = "get",
  uri = "https://httpbin.org/get",
  options = list(headers = list(`User-Agent` = "foobar", stuff = "things"))
)
w
w$headers
w$to_s()

# headers and body
bb <- RequestSignature$new(
  method = "get",
  uri = "https://httpbin.org/get",
  options = list(
    headers = list(`User-Agent` = "foobar", stuff = "things"),
    body = list(a = "tables")
  )
)
```

```

    )
  )
  bb
  bb$headers
  bb$body
  bb$to_s()

  # with disk path
  f <- tempfile()
  bb <- RequestSignature$new(
    method = "get",
    uri = "https://httpbin.org/get",
    options = list(disk = f)
  )
  bb
  bb$disk
  bb$to_s()

```

request_registry

List or clear requests in the request registry

Description

List or clear requests in the request registry

Usage

```
request_registry()
```

```
request_registry_clear()
```

Details

request_registry() lists the requests that have been made that webmockr knows about; request_registry_clear() resets the request registry (removes all recorded requests)

Value

an object of class RequestRegistry, print method gives the requests in the registry and the number of times each one has been performed

See Also

Other request-registry: [HashCounter](#), [RequestRegistry](#)

Examples

```
webmockr::enable()
stub_request("get", "https://httpbin.org/get") %>%
  to_return(body = "success!", status = 200)

# nothing in the request registry
request_registry()

# make the request
z <- crul::HttpClient$new(url = "https://httpbin.org")$get("get")

# check the request registry - the request was made 1 time
request_registry()

# do the request again
z <- crul::HttpClient$new(url = "https://httpbin.org")$get("get")

# check the request registry - now it's been made 2 times, yay!
request_registry()

# clear the request registry
request_registry_clear()
webmockr::disable()
```

Response

Response

Description

custom webmockr http response class

Public fields

url (character) a url
 body (various) list, character, etc
 content (various) response content/body
 request_headers (list) a named list
 response_headers (list) a named list
 options (character) list
 status_code (integer) an http status code
 exception (character) an exception message
 should_timeout (logical) should the response timeout?

Methods

Public methods:

- `Response$new()`
- `Response$print()`
- `Response$set_url()`
- `Response$get_url()`
- `Response$set_request_headers()`
- `Response$get_request_headers()`
- `Response$set_response_headers()`
- `Response$get_response_headers()`
- `Response$set_body()`
- `Response$get_body()`
- `Response$set_status()`
- `Response$get_status()`
- `Response$set_exception()`
- `Response$get_exception()`
- `Response$clone()`

Method `new()`: Create a new Response object

Usage:

```
Response$new(options = list())
```

Arguments:

`options` (list) a list of options

Returns: A new Response object

Method `print()`: print method for the Response class

Usage:

```
Response$print(x, ...)
```

Arguments:

`x` self

`...` ignored

Method `set_url()`: set the url for the response

Usage:

```
Response$set_url(url)
```

Arguments:

`url` (character) a url

Returns: nothing returned; sets url

Method `get_url()`: get the url for the response

Usage:

```
Response$get_url()
```

Returns: (character) a url

Method `set_request_headers()`: set the request headers for the response

Usage:

`Response$set_request_headers(headers, capitalize = TRUE)`

Arguments:

`headers` (list) named list

`capitalize` (logical) whether to capitalize first letters of each header; default: TRUE

Returns: nothing returned; sets request headers on the response

Method `get_request_headers()`: get the request headers for the response

Usage:

`Response$get_request_headers()`

Returns: (list) request headers, a named list

Method `set_response_headers()`: set the response headers for the response

Usage:

`Response$set_response_headers(headers, capitalize = TRUE)`

Arguments:

`headers` (list) named list

`capitalize` (logical) whether to capitalize first letters of each header; default: TRUE

Returns: nothing returned; sets response headers on the response

Method `get_response_headers()`: get the response headers for the response

Usage:

`Response$get_response_headers()`

Returns: (list) response headers, a named list

Method `set_body()`: set the body of the response

Usage:

`Response$set_body(body, disk = FALSE)`

Arguments:

`body` (various types)

`disk` (logical) whether its on disk; default: FALSE

Returns: nothing returned; sets body on the response

Method `get_body()`: get the body of the response

Usage:

`Response$get_body()`

Returns: various

Method `set_status()`: set the http status of the response

Usage:

`Response$set_status(status)`

Arguments:

`status` (integer) the http status

Returns: nothing returned; sets the http status of the response

Method `get_status()`: get the http status of the response

Usage:

`Response$get_status()`

Returns: (integer) the http status

Method `set_exception()`: set an exception

Usage:

`Response$set_exception(exception)`

Arguments:

`exception` (character) an exception string

Returns: nothing returned; sets an exception

Method `get_exception()`: get the exception, if set

Usage:

`Response$get_exception()`

Returns: (character) an exception

Method `clone()`: The objects of this class are cloneable with this method.

Usage:

`Response$clone(deep = FALSE)`

Arguments:

`deep` Whether to make a deep clone.

Examples

```
## Not run:
(x <- Response$new())

x$set_url("https://httpbin.org/get")
x

x$set_request_headers(list('Content-Type' = "application/json"))
x
x$request_headers

x$set_response_headers(list('Host' = "httpbin.org"))
x
x$response_headers
```

```
x$set_status(404)
x
x$get_status()

x$set_body("hello world")
x
x$get_body()
# raw body
x$set_body(charToRaw("hello world"))
x
x$get_body()

x$set_exception("exception")
x
x$get_exception()

## End(Not run)
```

StubbedRequest

StubbedRequest

Description

stubbed request class underlying [stub_request\(\)](#)

Public fields

```
method (xx) xx
uri (xx) xx
uri_regex (xx) xx
uri_parts (xx) xx
host (xx) xx
query (xx) xx
body (xx) xx
basic_auth (xx) xx
request_headers (xx) xx
response_headers (xx) xx
responses_sequences (xx) xx
status_code (xx) xx
```

Methods

Public methods:

- `StubbedRequest$new()`
- `StubbedRequest$print()`
- `StubbedRequest$with()`
- `StubbedRequest$to_return()`
- `StubbedRequest$to_timeout()`
- `StubbedRequest$to_raise()`
- `StubbedRequest$to_s()`
- `StubbedRequest$clone()`

Method `new()`: Create a new `StubbedRequest` object

Usage:

```
StubbedRequest$new(method, uri = NULL, uri_regex = NULL)
```

Arguments:

`method` the HTTP method (any, head, get, post, put, patch, or delete). "any" matches any HTTP method. required.

`uri` (character) request URI. either this or `uri_regex` required. **webmockr** can match `uri`'s without the "http" scheme, but does not match if the scheme is "https". required, unless `uri_regex` given. See [UriPattern](#) for more.

`uri_regex` (character) request URI as regex. either this or `uri` required

Returns: A new `StubbedRequest` object

Method `print()`: print method for the `StubbedRequest` class

Usage:

```
StubbedRequest$print(x, ...)
```

Arguments:

`x` self

`...` ignored

Method `with()`: Set expectations for what's given in HTTP request

Usage:

```
StubbedRequest$with(  
  query = NULL,  
  body = NULL,  
  headers = NULL,  
  basic_auth = NULL  
)
```

Arguments:

`query` (list) request query params, as a named list. optional

`body` (list) request body, as a named list. optional

`headers` (list) request headers as a named list. optional.

`basic_auth` (character) basic authentication. optional.

Returns: nothing returned; sets only

Method `to_return()`: Set expectations for what's returned in HTTP response

Usage:

`StubbedRequest$to_return(status, body, headers)`

Arguments:

`status` (numeric) an HTTP status code

`body` (list) response body, one of: character, json, list, raw, numeric, NULL, FALSE, or a file connection (other connection types not supported)

`headers` (list) named list, response headers. optional.

Returns: nothing returned; sets what's to be returned

Method `to_timeout()`: Response should time out

Usage:

`StubbedRequest$to_timeout()`

Returns: nothing returned

Method `to_raise()`: Response should raise an exception `x`

Usage:

`StubbedRequest$to_raise(x)`

Arguments:

`x` (character) an exception message

Returns: nothing returned

Method `to_s()`: Response as a character string

Usage:

`StubbedRequest$to_s()`

Returns: (character) the response as a string

Method `clone()`: The objects of this class are cloneable with this method.

Usage:

`StubbedRequest$clone(deep = FALSE)`

Arguments:

`deep` Whether to make a deep clone.

x$to_raise(HTTPBadGateway)
x$to_s()
x

## End(Not run)

```

StubRegistry

StubRegistry

Description

stub registry to keep track of [StubbedRequest](#) stubs

Public fields

request_stubs (list) list of request stubs

global_stubs (list) list of global stubs

Methods

Public methods:

- [StubRegistry#print\(\)](#)
- [StubRegistry\\$register_stub\(\)](#)
- [StubRegistry\\$find_stubbed_request\(\)](#)
- [StubRegistry\\$request_stub_for\(\)](#)
- [StubRegistry\\$remove_request_stub\(\)](#)
- [StubRegistry\\$remove_all_request_stubs\(\)](#)
- [StubRegistry\\$is_registered\(\)](#)
- [StubRegistry\\$clone\(\)](#)

Method print(): print method for the StubRegistry class

Usage:

StubRegistry#print(x, ...)

Arguments:

x self

... ignored

Method register_stub(): Register a stub

Usage:

StubRegistry\$register_stub(stub)

Arguments:

stub an object of type [StubbedRequest](#)

Returns: nothing returned; registers the stub

Method find_stubbed_request(): Find a stubbed request

Usage:

StubRegistry\$find_stubbed_request(req)

Arguments:

req an object of class [RequestSignature](#)

Returns: an object of type [StubbedRequest](#), if matched

Method request_stub_for(): Find a stubbed request

Usage:

StubRegistry\$request_stub_for(request_signature)

Arguments:

request_signature an object of class [RequestSignature](#)

Returns: logical, 1 or more

Method remove_request_stub(): Remove a stubbed request by matching request signature

Usage:

StubRegistry\$remove_request_stub(stub)

Arguments:

stub an object of type [StubbedRequest](#)

Returns: nothing returned; removes the stub from the registry

Method remove_all_request_stubs(): Remove all request stubs

Usage:

StubRegistry\$remove_all_request_stubs()

Returns: nothing returned; removes all request stubs

Method is_registered(): Find a stubbed request

Usage:

```
StubRegistry$is_registered(x)
```

Arguments:

x an object of class [RequestSignature](#)

Returns: nothing returned; registers the stub

Method clone(): The objects of this class are cloneable with this method.

Usage:

```
StubRegistry$clone(deep = FALSE)
```

Arguments:

deep Whether to make a deep clone.

See Also

Other stub-registry: [remove_request_stub\(\)](#), [stub_registry_clear\(\)](#), [stub_registry\(\)](#)

Examples

```
## Not run:
# Make a stub
stub1 <- StubbedRequest$new(method = "get", uri = "api.crossref.org")
stub1$with(headers = list('User-Agent' = 'R'))
stub1$to_return(status = 200, body = "foobar", headers = list())
stub1

# Make another stub
stub2 <- StubbedRequest$new(method = "get", uri = "api.crossref.org")
stub2

# Put both stubs in the stub registry
reg <- StubRegistry$new()
reg$register_stub(stub = stub1)
reg$register_stub(stub = stub2)
reg
reg$request_stubs

## End(Not run)
```

stub_registry

List stubs in the stub registry

Description

List stubs in the stub registry

Usage

```
stub_registry()
```

Value

an object of class StubRegistry, print method gives the stubs in the registry

See Also

Other stub-registry: [StubRegistry](#), [remove_request_stub\(\)](#), [stub_registry_clear\(\)](#)

Examples

```
# make a stub
stub_request("get", "https://httpbin.org/get") %>%
  to_return(body = "success!", status = 200)

# check the stub registry, there should be one in there
stub_registry()

# make another stub
stub_request("get", "https://httpbin.org/get") %>%
  to_return(body = "woopsy", status = 404)

# check the stub registry, now there are two there
stub_registry()

# to clear the stub registry
stub_registry_clear()
```

stub_registry_clear	<i>stub_registry_clear</i>
---------------------	----------------------------

Description

Clear all stubs in the stub registry

Usage

```
stub_registry_clear()
```

Value

an empty list invisibly

See Also

Other stub-registry: [StubRegistry](#), [remove_request_stub\(\)](#), [stub_registry\(\)](#)

Examples

```
(x <- stub_request("get", "https://httpbin.org/get"))
stub_registry()
stub_registry_clear()
stub_registry()
```

stub_request	<i>Stub an http request</i>
--------------	-----------------------------

Description

Stub an http request

Usage

```
stub_request(method = "get", uri = NULL, uri_regex = NULL)
```

Arguments

method	(character) HTTP method, one of "get", "post", "put", "patch", "head", "delete", "options" - or the special "any" (for any method)
uri	(character) The request uri. Can be a full or partial uri. webmockr can match uri's without the "http" scheme, but does not match if the scheme is "https". required, unless uri_regex given. See UriPattern for more.
uri_regex	(character) A URI represented as regex. required, if uri not given. See examples

Details

Internally, this calls [StubbedRequest](#) which handles the logic

See [stub_registry\(\)](#) for listing stubs, [stub_registry_clear\(\)](#) for removing all stubs and [remove_request_stub\(\)](#) for removing specific stubs

If multiple stubs match the same request, we use the first stub. So if you want to use a stub that was created after an earlier one that matches, remove the earlier one(s).

Note on [wi_th\(\)](#): If you pass query values are coerced to character class in the recorded stub. You can pass numeric, integer, etc., but all will be coerced to character.

See [wi_th\(\)](#) for details on request body/query/headers and [to_return\(\)](#) for details on how response status/body/headers are handled

Value

an object of class `StubbedRequest`, with print method describing the stub.

Matching URI's

- Trailing slashes are dropped from stub URIs before matching
- Query parameters are dropped from stub URIs before matching; URIs are compared without query parameters

Mocking writing to disk

See [mocking-disk-writing](#)

See Also

x$get('put', query = list(stuff = 3423234L))

# many responses
## the first response matches the first to_return call, and so on
stub_request("get", "https://httpbin.org/get") %>%
  to_return(status = 200, body = "foobar", headers = list(a = 5)) %>%
  to_return(status = 200, body = "bears", headers = list(b = 6))
con <- crul::HttpClient$new(url = "https://httpbin.org")
con$get("get")$parse("UTF-8")
con$get("get")$parse("UTF-8")

## OR, use times with to_return() to repeat the same response many times
library(fauxpas)
stub_request("get", "https://httpbin.org/get") %>%
  to_return(status = 200, body = "apple-pie", times = 2) %>%
  to_raise(HTTPUnauthorized)
con <- crul::HttpClient$new(url = "https://httpbin.org")
con$get("get")$parse("UTF-8")
con$get("get")$parse("UTF-8")
con$get("get")$parse("UTF-8")

```

```
# clear all stubs
stub_registry()
stub_registry_clear()

## End(Not run)
```

to_raise	<i>Set raise error condition</i>
----------	----------------------------------

Description

Set raise error condition

Usage

```
to_raise(.data, ...)
```

Arguments

.data	input. Anything that can be coerced to a StubbedRequest class object
...	One or more HTTP exceptions from the fauxpas package. Run <code>grep("HTTP*", getNamespaceExports("fauxpas") = TRUE)</code> for a list of possible exceptions

Details

The behavior in the future will be:

When multiple exceptions are passed, the first is used on the first mock, the second on the second mock, and so on. Subsequent mocks use the last exception

But for now, only the first exception is used until we get that fixed

Value

an object of class StubbedRequest, with print method describing the stub

Note

see examples in [stub_request\(\)](#)

to_return	<i>Expectation for what's returned from a stubbed request</i>
-----------	---

Description

Set response status code, response body, and/or response headers

Usage

```
to_return(.data, ..., .list = list(), times = 1)
```

Arguments

<code>.data</code>	input. Anything that can be coerced to a <code>StubbedRequest</code> class object
<code>...</code>	Comma separated list of named variables. accepts the following: <code>status</code> , <code>body</code> , <code>headers</code> . See Details for more.
<code>.list</code>	named list, has to be one of <code>'status'</code> , <code>'body'</code> , and/or <code>'headers'</code> . An alternative to passing in via <code>...</code> . Don't pass the same thing to both, e.g. don't pass <code>'status'</code> to <code>...</code> , and also <code>'status'</code> to this parameter
<code>times</code>	(integer) number of times the given response should be returned; default: 1. value must be greater than or equal to 1. Very large values probably don't make sense, but there's no maximum value. See Details.

Details

Values for `status`, `body`, and `headers`:

- `status`: (numeric/integer) three digit status code
- `body`: various: character, json, list, raw, numeric, NULL, FALSE, a file connection (other connection types not supported), or a `mock_file` function call (see [mock_file\(\)](#))
- `headers`: (list) a named list, must be named

response headers are returned with all lowercase names and the values are all of type character. if numeric/integer values are given (e.g., `to_return(headers = list(a = 10))`), we'll coerce any numeric/integer values to character.

Value

an object of class `StubbedRequest`, with `print` method describing the stub

multiple to_return()

You can add more than one `to_return()` to a webmockr stub (including [to_raise\(\)](#), [to_timeout\(\)](#)). Each one is a HTTP response returned. That is, you'll match to an HTTP request based on `stub_request()` and `with()`; the first time the request is made, the first response is returned; the second time the request is made, the second response is returned; and so on.

Be aware that webmockr has to track number of requests (see [request_registry\(\)](#)), and so if you use multiple [to_return\(\)](#) or the `times` parameter, you must clear the request registry in order to go back to mocking responses from the start again. [webmockr_reset\(\)](#) clears the stub registry and the request registry, after which you can use multiple responses again (after creating your stub(s) again of course)

Note

see more examples in [stub_request\(\)](#)

Examples

```
# first, make a stub object
foo <- function() {
  stub_request("post", "https://httpbin.org/post")
}

# add status, body and/or headers
foo() %>% to_return(status = 200)
foo() %>% to_return(body = "stuff")
foo() %>% to_return(body = list(a = list(b = "world")))
foo() %>% to_return(headers = list(a = 5))
foo() %>%
  to_return(status = 200, body = "stuff", headers = list(a = 5))

# .list - pass in a named list instead
foo() %>% to_return(.list = list(body = list(foo = "bar")))

# multiple responses using chained `to_return()`
foo() %>% to_return(body = "stuff") %>% to_return(body = "things")

# many of the same response using the times parameter
foo() %>% to_return(body = "stuff", times = 3)
```

to_timeout

Set timeout as an expected return on a match

Description

Set timeout as an expected return on a match

Usage

```
to_timeout(.data)
```

Arguments

`.data` input. Anything that can be coerced to a `StubbedRequest` class object

Value

an object of class `StubbedRequest`, with `print` method describing the stub

Note

see examples in [stub_request\(\)](#)

webmockr-defunct

Defunct functions in webmockr

Description

- [webmockr_enable\(\)](#): Function removed, see [enable\(\)](#)
- [webmockr_disable\(\)](#): Function removed, see [disable\(\)](#)
- [to_return_](#): Only [to_return\(\)](#) is available now
- [wi_th_](#): Only [wi_th\(\)](#) is available now

webmockr_configure

webmockr configuration

Description

webmockr configuration

Usage

```
webmockr_configure(
  allow_net_connect = FALSE,
  allow_localhost = FALSE,
  allow = NULL,
  net_http_connect_on_start = FALSE,
  show_stubbing_instructions = FALSE,
  query_values_notation = FALSE,
  show_body_diff = FALSE
)

webmockr_configure_reset()

webmockr_configuration()

webmockr_allow_net_connect()

webmockr_disable_net_connect(allow = NULL)

webmockr_net_connect_allowed(uri = NULL)
```

Arguments

allow_net_connect
(logical) Default: FALSE

allow_localhost
(logical) Default: FALSE

allow
(character) one or more URI/URL to allow (and by extension all others are not allowed)

net_http_connect_on_start
(logical) Default: FALSE. ignored for now

show_stubbing_instructions
(logical) Default: FALSE. ignored for now

query_values_notation
(logical) Default: FALSE. ignored for now

show_body_diff (logical) Default: FALSE. ignored for now

uri
(character) a URI/URL as a character string - to determine whether or not it is allowed

webmockr_allow_net_connect

If there are stubs found for a request, even if net connections are allowed (by running `webmockr_allow_net_connect()`) the stubbed response will be returned. If no stub is found, and net connections are allowed, then a real HTTP request can be made.

Examples

```
## Not run:
webmockr_configure()
webmockr_configure(
  allow_localhost = TRUE
)
webmockr_configuration()
webmockr_configure_reset()

webmockr_allow_net_connect()
webmockr_net_connect_allowed()

# disable net connect for any URIs
webmockr_disable_net_connect()
### gives NULL with no URI passed
webmockr_net_connect_allowed()
# disable net connect EXCEPT FOR given URIs
webmockr_disable_net_connect(allow = "google.com")
### is a specific URI allowed?
webmockr_net_connect_allowed("google.com")

## End(Not run)
```

webmockr_reset	<i>webmockr_reset</i>
----------------	-----------------------

Description

Clear all stubs and the request counter

Usage

```
webmockr_reset()
```

Details

this function runs `stub_registry_clear()` and `request_registry_clear()` - so you can run those two yourself to achieve the same thing

Value

nothing

See Also

`stub_registry_clear()` `request_registry_clear()`

Examples

```
# webmockr_reset()
```

wi_th	<i>Set additional parts of a stubbed request</i>
-------	--

Description

Set query params, request body, request headers and/or basic_auth

Usage

```
wi_th(.data, ..., .list = list())
```

Arguments

- | | |
|--------------------|--|
| <code>.data</code> | input. Anything that can be coerced to a StubbedRequest class object |
| <code>...</code> | Comma separated list of named variables. accepts the following: query, body, headers, basic_auth. See Details. |
| <code>.list</code> | named list, has to be one of query, body, headers and/or basic_auth. An alternative to passing in via <code>...</code> . Don't pass the same thing to both, e.g. don't pass 'query' to <code>...</code> , and also 'query' to this parameter |

Details

with is a function in the base package, so we went with wi_th

Values for query, body, headers, and basic_auth:

- query: (list) a named list. values are coerced to character class in the recorded stub. You can pass numeric, integer, etc., but all will be coerced to character.
- body: various, including character string, list, raw, numeric, upload (crul::upload or http::upload_file, they both create the same object in the end)
- headers: (list) a named list
- basic_auth: (character) a length two vector, username and password. authentication type (basic/digest/ntlm/etc.) is ignored. that is, mocking authentication right now does not take into account the authentication type

Note that there is no regex matching on query, body, or headers. They are tested for matches in the following ways:

- query: compare stubs and requests with identical(). this compares named lists, so both list names and values are compared
- body: varies depending on the body format (list vs. character, etc.)
- headers: compare stub and request values with ==. list names are compared with %in%. basic_auth is included in headers (with the name Authorization)

Value

an object of class StubbedRequest, with print method describing the stub

Note

see more examples in [stub_request\(\)](#)

Examples

```
# first, make a stub object
req <- stub_request("post", "https://httpbin.org/post")

# add body
# list
wi_th(req, body = list(foo = "bar"))
# string
wi_th(req, body = '{"foo": "bar"}')
# raw
wi_th(req, body = charToRaw('{"foo": "bar"}'))
# numeric
wi_th(req, body = 5)
# an upload
wi_th(req, body = crul::upload(system.file("CITATION")))
# wi_th(req, body = http::upload_file(system.file("CITATION")))

# add query - has to be a named list
```

```
wi_th(req, query = list(foo = "bar"))

# add headers - has to be a named list
wi_th(req, headers = list(foo = "bar"))
wi_th(req, headers = list(`User-Agent` = "webmockr/v1", hello="world"))

# .list - pass in a named list instead
wi_th(req, .list = list(body = list(foo = "bar")))

# basic authentication
wi_th(req, basic_auth = c("user", "pass"))
wi_th(req, basic_auth = c("user", "pass"), headers = list(foo = "bar"))
```
